## LIST OF ACRONYMS

Acronym	Definition
AOC	Area of Concern
AST	Aboveground Storage Tank
BCP	Brownfields Cleanup Program
BCA	Brownfield Site Cleanup Agreement
CVOC	Chlorinated VOC
ESA	Environmental Site Assessment
EBC	Environmental Business Consultants
IRM	Interim Remedial Measure Work Plan
NYCDEP	New York City Department of Environmental Protection
NYSDEC	New York State Department of Environmental Conservation
NYSDOH	New York State Department of Health
PID	Photo-Ionization Detector
PCB	Polychlorinated Biphenyls
REC	Recognized Environmental Condition
RI	Remedial Investigation
RIWR	Remedial Investigation Work Plan
SVOC	Semi-Volatile Organic Compound
UST	Underground Storage Tank
VOC	Volatile Organic Compound

## REPORT CERTIFICATION

I, Charles Sosik, certify that I am currently a Qualified Environmental Professional as defined in 6 NYCRR Part 375 and that this Remedial Investigation Report was prepared in accordance with all applicable statutes and regulations and in substantial conformance with the DER Technical Guidance for Site Investigation and Remediation (DER-10) and that all activities were performed in full accordance with the DER-approved work plan and any DER-approved modifications.

Charles Sosik  
Principal

Date: 5-31-2016

## **1.0 INTRODUCTION**

### **1.1 Project Background**

This Remedial Investigation Report (RIR) was prepared on behalf of 101 Lincoln Associates Property LLC for the property known as the Former Bronx Freight Terminal, located at 101 Lincoln Avenue, Bronx, New York (hereafter referred to as the Site). In May 2015, 101 Lincoln Associates Property LLC (Requestor) filed an application with the New York State Department of Environmental Conservation (NYSDEC), to admit the Project Site into the New York State Brownfield Cleanup Program (BCP). This application was denied because of insufficient evidence of contamination requiring remediation. Following denial of the BCP application, the Requestor performed additional sampling to comply with the hazardous material “e” designation. This work resulted in discovery of previously unknown contamination. As a result, the Requestor has re-applied with the New York State Department of Environmental Conservation (NYSDEC), to admit the Project Site into the New York State Brownfield Cleanup Program (BCP) in May 2016. This RIR is being submitted with the application.

The purpose of this Remedial Investigation Report is to collect data of sufficient quality and quantity to characterize the nature and extent of contamination and to complete a qualitative exposure assessment for future occupants of the proposed building and the surrounding community.

The overall objectives of the project are to prepare the Site for unrestricted use as defined in the Brownfield Cleanup Agreement and to remediate known and unknown environmental conditions at the Site to the satisfaction of the NYSDEC and the New York State Department of Health (NYSDOH).

The field work portion of the RI was conducted by EBC in December 2015.

### **1.2 Site Location and Description**

The street address for the Site is 101 Lincoln Avenue, Bronx, NY (**Figure 1**). The Site is located in the South Bronx section of Bronx County and is comprised of a single tax lot (**Figure 2**) totaling 133,700 sf (3.07 acres). The property has approximately 300 feet of street frontage on Bruckner Avenue, approximately 350 ft of street frontage on Lincoln Avenue and approximately 500 ft of frontage along the north side of the Harlem River.

The lot is developed with a one-story L-shaped warehouse building with a connected two-story office building totaling 83,064 square feet. The Site was first developed sometime before 1908. From 1908 to 1951 the Site was occupied by the New Jersey Central Rail Bronx Freight Terminal. From 1968 to 2007, the Site is identified as Gerosa Haulage Corporation (with uses including crane repair, paint shop, blacksmith shop, and garage repair shop). According to the NYC Department of Buildings, the existing building was constructed in 1966.

The buildings are being demolished as part of the redevelopment of the Site.

The area surrounding the Site is primarily commercial and industrial buildings to the east and west, several mixed use properties to the north, and the Harlem River to the south. There are no Schools or Daycare facilities within a 1,000 ft of the project Site.

The elevation of the Site is approximately feet above the National Geodetic Vertical Datum (NGVD). The area topography gradually slopes to the southwest. The depth to groundwater beneath the Site is 6-7 feet below grade. Based on regional groundwater elevation maps, and measurements made at the Site, groundwater flows to the southwest toward the Harlem River.

### **1.3 Redevelopment Plans**

The proposed new building will consist of three new 25-story and one 18-story residential tower buildings. The towers will be interconnected with a common base which will include three 6-story, one 5-story, two 4-story, one 2-story and two single story buildings. The project will include 74,000 sf of underground parking, 31,199 sf of retail space, 2,872 sf of community space and 833,829 sf of residential space.

### **1.4 Site History**

According to the Phase I Report, the Site was first developed sometime before 1908. From 1908 to 1951 the Site was occupied by the New Jersey Central Rail Bronx Freight Terminal. From 1968 to 2007, the Site is identified as Gerosa Haulage Corporation (with uses including crane repair, paint shop, blacksmith shop, and garage repair shop). According to the NYC Department of Buildings, the existing building was constructed in 1966.

### **1.5 Summary of Previous Investigations**

Environmental investigations performed at the Site include the following:

- Phase I Environmental Site Assessment - Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C. April, 2014

#### *1.5.1 April 2014 - Phase I Environmental Site Assessment Report (Langan)*

A Phase I Environmental Site Assessment Report was prepared by Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C. (Langan) on April, 2014.

Based upon reconnaissance of the subject and surrounding properties, interviews and review of historical records and regulatory agency databases, Langan identified the following recognized environmental conditions:

#### REC 1 – Current and Historical Site Use

The following current and historical property uses are considered a REC:

- Coal Storage from approximately 1891 to 1908;

- New Jersey Rail Road Bronx Freight terminal from approximately 1908 through the 1950s; and,
- Crane repair, paint shop, blacksmith shop, bus depot, and vehicle repair shop from approximately 1968 to present.

The Site is divided into two sections with Third Avenue Transit Inc. occupying the eastern portion of the Site and Oz Moving & Storage occupying the western portion. Third Avenue Transit Inc. utilizes the Site for storage of equipment & materials, school bus repairs, and as office space. There is an oil-water separator with an apparent leak detection system in the middle of the Third Avenue Transit warehouse building. The condition of the oil-water separator system is unknown. Oz Moving & Storage utilizes the Site for the storage of equipment, materials and vehicles, and vehicle repair. Vehicle repair equipment and discolored and stained floors are apparent throughout the building. Inadvertent and/or incidental releases of solvents, petroleum products, PCBs and/or other chemicals used during operations at these facilities may have adversely impacted soil, soil vapor and groundwater.

#### REC 2 – On-Site Closed-In-Place Underground Storage Tanks

Twelve 550-gallon diesel USTs, two 550-gallon gasoline USTs, one 1,000-gallon motor oil UST, and one 1,000-gallon waste oil UST were closed-in-place between 1991 and 1992. Inadvertent releases from these tanks while they were active may have impacted soil, soil vapor, and groundwater. Based on the historic usage and the presumed age of the tanks (approximately 44 years), the closed-in-place USTs are a REC.

#### REC 3 – Potential Historic Petroleum Storage

An apparent fill port was identified in the sidewalk along the northwestern edge of the Site. There are no records of a petroleum bulk storage tank near the apparent fill port. Based on the potential presence of tanks and lack of any closure documentation, the fill port and potential petroleum tank(s) are a REC.

#### REC 4 – Soil Staining

Petroleum-like staining and odors were identified along the southwestern corner of the building during the site reconnaissance. A petroleum release may have impacted soil, soil vapor and groundwater and is considered a REC. According to the NYC Department of Finance Tax Map, an approximate 50-foot wide sliver of land (Block 2316, Lot 35) exists between the Site and the Harlem River; therefore, the observed soil staining may be located outside the Site property line.

#### REC 5 – Historical Use of Surrounding Properties

Historical use of properties surrounding the Site include commercial buildings with office space, lofts, auto repairs (1908 – present), parking garages (1951 – 1968), manufacturing facilities (1891 – 1946), freight depots (1891 – 1947), a piano factory (1891), printing (1935 – 1947), and woodworking (1891). Additionally, an active NYSDEC Brownfields Site was identified

approximately 745 feet northeast (up-gradient) of the Site. Based on investigations conducted to date, the primary contaminants of concern in soil and groundwater are petroleum related compounds. No information was provided with respect to the off-site migration of contaminants; however, the EDR report indicates that the potential exists for off-site migration of site-related contaminants in soil vapor. Potential petroleum and solvent releases associated with the historical surrounding property uses may have adversely impacted soil, groundwater, and/or soil vapor at the Site and is, therefore, considered a REC.

This report is included in Appendix F.

## 2.0 REMEDIAL INVESTIGATION

### 2.1 Field Investigation

A Phase II work plan was approved by OER in October 2015 in connection with the hazardous material “e” designation and is attached in Appendix F. The field work portion of the RI was conducted by EBC from December 4, 2015 through December 8, 2015. The field investigation consisted of environmental sampling, field observations and measurements to determine:

- Local geologic/hydro geological conditions;
- Definition of source areas;
- Potential migration of contaminants from the Site to surrounding areas; and,
- Overall characterization of site-related contamination in all media.

The field effort included the collection and analysis of soil, groundwater and soil vapor samples. Laboratory services for soil, groundwater and soil vapor analysis were provided by Phoenix Environmental Laboratories of Manchester, CT (NY Cert. No. 11301).

A sample matrix showing the number, type and analysis of samples collected during the Remedial Investigation is provided as **Table 1**.

### 2.2 Deviations from the Remedial Investigation Work Plan

The following changes were made in performing the Remedial Investigation:

- Soil borings 15SB6 and 15SB9 and monitoring well MW5 were moved northeast of their original locations due to accessibility.
- SV5 malfunctioned during sampling and therefore sample could not be analyzed.
- All soil vapor samples were collected at a depth of 2-4 feet below grade due to the depth to water.

### 2.3 Soil Sampling

#### 2.3.1 Soil Borings

A total of twelve (12) soil borings were advanced during the RI to identify source areas and to obtain general soil quality information present at the Site (**Figure 3**). Three (3) of the borings were installed inside the current building, nine (9) borings were advanced at outdoor locations. All soil boring locations were advanced on December 4, 2015 and December 7, 2015.

Soil samples were collected from the 0-2 foot and the 12-14 foot intervals at all soil boring locations. Soil recovered from each soil boring was field screened by a qualified environmental professional for the presence of VOCs with a photo-ionization detector (PID) and visually inspected for evidence of contamination. Depth to groundwater was confirmed at 5.82 to 7.98 feet below grade. Soil boring logs are provided in **Appendix A**.

Twenty six (26) soil samples were retained for analysis from the twelve (12) soil boring locations. Samples analyzed for VOCs (EPA Method 8260), SVOCs (EPA Method 8270), metals (EPA Method 6010), Pesticides and PCBs (EPA Method 8081/8082). Soil sample analytical results were compared to NYSDEC Part 375.6 Unrestricted Use and Residential Restricted SCOs.

## 2.4 Monitoring Well Installation

Six groundwater monitoring wells, MW1 through MW6, were installed at the Site on December 4, 2015 and December 7, 2015.

All of the wells were installed with a track mounted probe drilling machine to a depth of approximately 15 feet below grade with 10 feet of 0.010 PVC well screen and 5 feet of PVC riser.

A No. 00 morie filter-pack sand filled the annulus surrounding the screen within two feet above the top of the screen. A one-foot hydrated bentonite seal was then placed on top of the filter sand and the remainder of the borehole was backfilled to grade. Following installation, each of the wells were surveyed to determine relative casing elevation to the nearest 0.01 ft and horizontal position to the nearest 0.1 ft. Groundwater elevations and monitoring well specifications for each well are provided in **Table 2**. Monitoring well locations are identified in **Figure 4**. Well completion reports detailing monitoring well construction are provided in **Appendix B**.

Prior to sampling, a synoptic round of depth-to-groundwater (DTW) measurements were obtained from all wells on December 10, 2015 to determine the water table elevation and to calculate the volume of standing water in the well. D The depth to groundwater ranged from 5.82 to 7.98 feet below surface grade. Depth to water and survey readings are provided in **Table 2**. A groundwater elevation map from the December 2015 depth to water readings is provided as **Figures 5, respectively**.

### 2.4.1 Groundwater Sampling

All six of the six monitoring wells (MW1 through MW6) were sampled on December 8, 2015.

Samples were collected from the monitoring wells using low-flow sampling techniques and were monitored continuously until parameters stabilized. A peristaltic pump and polyethylene sampling tube were used to purge and collect samples from each well location. Sample tubing and the silicone pump tubing were replaced between each sample location. Samples were collected directly into pre-cleaned laboratory supplied glassware, stored in a cooler with ice and submitted to Phoenix Environmental Laboratories of Manchester, CT, a New York State ELAP certified environmental laboratory (ELAP Certification No. 11301). Groundwater sampling logs are provided in **Appendix C**.

All groundwater samples from the monitoring wells were analyzed for VOCs / SVOCs by EPA method 8260 / 8270, target analyte list (TAL) metals by EPA method 6010 and Pesticides/PCBs by method 8081/8082.

## 2.5 Soil Vapor Sampling

Eight (8) soil vapor samples (SV1-SV8) were collected from vapor implants installed at a depth of 2-4 feet below grade (due to depth to water) on December 7, 2015. Soil vapor sampling locations are shown on **Figure 4**. All soil vapor samples were collected over a 2-hr sampling period.

Soil vapor samples were collected in accordance with the procedures as described in the *Guidance for Evaluating Soil Vapor Intrusion in the State of New York (NYSDOH 10/06)*.

### *2.5.1 Installation of Soil Vapor Implants*

Eight (8) soil vapor implants were installed at the Site on December 7, 2015 and sampled on December 8, 2015. The vapor implants (Geoprobe™ Model AT86 series) were constructed of a 6-inch length of double woven stainless steel wire and installed to a depth of 2-4 ft below the slab using Geoprobe™ equipment.

During installation, the barbed end of each implant was attached to ¼ inch polyethylene tubing which extended approximately 24 inches beyond that needed to reach the surface. The tubing was capped with a ¼ inch plastic end to prevent the infiltration of foreign particles into the tube. Coarse sand was placed around the vapor implant to a height of approximately 1 foot above the bottom of the implant. The remainder of the borehole was sealed with a bentonite slurry to the surface. The tubing and borehole were then sealed at the surface with hydrated granular bentonite and a 12" x 12" (approx.) plastic sheet.

### *2.5.2 Surface Seal Test Procedure*

In accordance with NYSDOH guidance, a tracer gas (helium) was used as a quality assurance/quality control device to verify the integrity of the sampling point seal prior to collecting the samples. This was accomplished by enriching the air space above the seal with a tracer gas (helium) while continuously monitoring air drawn from the implant with a helium detector (Ionscience Gas Check G).

The tracer gas test procedure was employed at all 8 soil vapor sampling locations. All seals tested tight with no infiltration of helium through the surface.

### *2.5.3 Soil Vapor Sample Collection*

Following verification that the surface seal was tight, one to three volumes (i.e., the volume of the sample probe and tube) were purged with a handheld vacuum pump prior to collecting the samples to ensure samples collected were representative. After purging, a 6-liter summa canister, fitted with a 2-hour flow regulator was attached to the surface tube of each of the sampling points and the valve opened to initiate sampling. Sample identification, date, start time, start vacuum, end time and end vacuum were recorded on tags attached to each canister and on a sample log sheet (**Appendix D**). When the remaining vacuum in the canisters was between 0 and 7 inches Hg, (after approximately 2 hrs of run-time) the valve was closed and the canisters were detached from the sampling tube.

The sample from location SV5 was not analyzed due to a malfunctioning regulator on the canister. Sample canisters were picked up the following day by a Phoenix laboratory courier and delivered to the laboratory for analysis of VOCs by USEPA Method TO-15.

## 2.6 Laboratory Analysis

Data tables summarizing the laboratory results are provided in **Tables 3** through **13** and copies of the laboratory reports (with chains-of-custody) are included in digital format in **Appendix E**. Soil sample results were compared to both Unrestricted Use and Restricted Residential Soil Cleanup Objectives (SCOs) as promulgated in 6 NYCRR Subpart 375-6. Groundwater results were compared to NYSDEC Division of Water, Technical & Operational Guidance Series 1.1.1, Ambient Water Quality Standards and Guidance Values (AWQS), June 1998. Soil vapor analytical results were compared to Outdoor Background Levels for Selected Compounds and sub-slab and indoor air guidance levels as presented in the NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York, October 2006. **Table 7** contains a list of parameters detected above Track 1 unrestricted soil cleanup objectives and the range in detections. **Table 14** contains a list of parameters detected above ambient groundwater standards and the range in detections.

### 2.6.1 Analytical Results – Soil Samples

A total of twenty-six (26) soil samples were collected from twenty-five (25) soil borings for laboratory analysis of VOCs (EPA Method 8260), SVOCs (EPA Method 8270), TAL metals and pesticides/PCBs (EPA Method 8081/8082).

Soil sampling results are summarized in **Tables 3** through **6**. All soil results above Unrestricted Use SCOs are presented in **Table 7** and posted on **Figures 6**.

Soil samples collected from the borings had elevated levels of VOCs, SVOCs and heavy metals that exceeded either unrestricted use SCOs as follows:

#### **VOCs in Soil Above Unrestricted Use SCOs:**

15B3 (0-2ft) – Acetone (77 µg/kg)

15B5 (12-14ft) – Acetone (51 µg/kg)

15B6 (12-14ft) – Ethylbenzene (31,000 µg/kg), n-Propylbenzene (3,900 µg/kg)

15B8 (0-2ft) – Acetone (61 µg/kg)

15B9 (12-14ft) – Ethylbenzene (2,700 µg/kg)

15B10 (12-14ft) – Acetone (53 µg/kg)

15B11 (12-14ft) – Acetone (320 µg/kg)

Duplicate- none

VOCs were not detected above NYSDEC (Part 375.6) Restricted Residential Soil Cleanup Objectives in any of the samples.

**SVOCs in Soil Above Unrestricted Use SCOs:**

15B2 (0-2ft) - Benzo(k)fluoranthene (2,100 µg/kg), Chrysene (2,600 µg/kg)

15B5 (0-2ft) - Benzo(k)fluoranthene (950 µg/kg), Chrysene (1,300 µg/kg)

15B5 (12-14ft) - Benzo(k)fluoranthene (1,900 µg/kg), Chrysene (3,000 µg/kg)

15B6 (0-2ft) - Benzo(k)fluoranthene (2,100 µg/kg), Chrysene (2,600 µg/kg)

15B11 (0-2ft) - Benzo(k)fluoranthene (1,000 µg/kg), Chrysene (1,400 µg/kg)

15B11 (12-14ft) - Benzo(k)fluoranthene (1,200 µg/kg), Chrysene (2,000 µg/kg)

**SVOCs in Soil Above Restricted Residential SCOs:**

15B2 (0-2ft) - Benz(a)anthracene (2,400 µg/kg), Benzo(a)pyrene (2,400 µg/kg),  
Benzo(b)fluoranthene (2,100 µg/kg), Indeno(1,2,3-cd)pyrene (1,400 µg/kg)

15B5 (0-2ft) - Benz(a)anthracene (1,100 µg/kg), Benzo(a)pyrene (1,200 µg/kg),  
Benzo(b)fluoranthene (1,100 µg/kg), Indeno(1,2,3-cd)pyrene (740 µg/kg)

15B5 (12-14ft) - Benz(a)anthracene (2,900 µg/kg), Benzo(a)pyrene (2,600 µg/kg),  
Benzo(b)fluoranthene (1,600 µg/kg), Indeno(1,2,3-cd)pyrene (1,300 µg/kg)

15B6 (0-2ft) - Benz(a)anthracene (2,400 µg/kg), Benzo(a)pyrene (2,500 µg/kg),  
Benzo(b)fluoranthene (2,300 µg/kg), Dibenz(a,h)anthracene (370 µg/kg), Indeno(1,2,3-  
cd)pyrene (1,600 µg/kg)

15B6 (12-14ft) - Benz(a)anthracene (9,600 µg/kg), Benzo(a)pyrene (9,000 µg/kg),  
Benzo(b)fluoranthene (7,000 µg/kg), Benzo(k)fluoranthene (6,500 µg/kg), Chrysene (10,000  
µg/kg), Dibenz(a,h)anthracene (910 µg/kg), Indeno(1,2,3-cd)pyrene (4,600 µg/kg)

15B8 (0-2ft) - Benz(a)anthracene (7,000 µg/kg), Benzo(a)pyrene (6,300 µg/kg),  
Benzo(b)fluoranthene (7,000 µg/kg), Benzo(k)fluoranthene (4,300 µg/kg), Chrysene (7,400  
µg/kg), Dibenz(a,h)anthracene (840 µg/kg), Indeno(1,2,3-cd)pyrene (3,800 µg/kg)

15B9 (0-2ft) - Indeno(1,2,3-cd)pyrene (520 µg/kg)

15B10 (12-14ft) - Benz(a)anthracene (7,400 µg/kg), Benzo(a)pyrene (6,700 µg/kg),  
Benzo(b)fluoranthene (5,800 µg/kg), Benzo(k)fluoranthene (4,300 µg/kg), Chrysene (8,200

µg/kg), Dibenz(a,h)anthracene (820 µg/kg), Indeno(1,2,3-cd)pyrene (3,600 µg/kg)

*15B11 (0-2ft)* - Benz(a)anthracene (1,100 µg/kg), Benzo(a)pyrene (1,400 µg/kg),  
Benzo(b)fluoranthene (1,400 µg/kg), Indeno(1,2,3-cd)pyrene (950 µg/kg)

*15B11 (12-14ft)* - Benz(a)anthracene (1,800 µg/kg), Benzo(a)pyrene (1,700 µg/kg),  
Benzo(b)fluoranthene (1,100 µg/kg), Indeno(1,2,3-cd)pyrene (1,000 µg/kg)

**Metals in Soil Above Unrestricted Use SCOs:**

*15B1 (0-2ft)* - Lead (74.3 mg/kg), Zinc (516 mg/kg)

*15B1 (12-14ft)* - Lead (98.2 mg/kg)

*15B2 (0-2ft)* - Lead (90.2 mg/kg), Zinc (133 mg/kg)

*15B3 (0-2ft)* - Mercury (0.59 mg/kg)

*15B3 (12-14ft)* - Lead (96.9 mg/kg)

*15B4 (0-2ft)* - Copper (81.2 mg/kg), Zinc (384 mg/kg)

*15B4 12-14ft)* - Mercury (0.43 mg/kg)

*15B5 (0-2ft)* – Chromium (32.1 mg/kg), Copper (138 mg/kg), Lead (388 mg/kg), Mercury (0.48 mg/kg), Zinc (282 mg/kg)

*15B5 (12-14ft)* – Chromium (38.4 mg/kg), Copper (121 mg/kg), Zinc (295 mg/kg)

*15B6 (0-2ft)* – Arsenic (14.3 mg/kg), Copper (52.4 mg/kg), Lead (208 mg/kg), Mercury (0.45 mg/kg), Zinc (180 mg/kg)

*15B6 (12-14ft)* – Nickel (40.5 mg/kg), Zinc (413 mg/kg)

*15B7 (0-2ft)* - Lead (92.2 mg/kg), Zinc (147 mg/kg)

*15B8 (0-2ft)* – Arsenic (16 mg/kg), Copper (86.9 mg/kg), Mercury (0.48 mg/kg), Zinc (335 mg/kg)

*15B7 (12-14ft)* - Lead (124 mg/kg), Mercury (0.69 mg/kg)

*15B9 (0-2ft)* - Lead (383 mg/kg), Zinc (135 mg/kg)

### **Pesticides in Soil Above Restricted Residential Use SCOs:**

No Pesticides were detected above NYSDEC Restricted Residential Use SCOs.

### **PCBs in Soil Above Unrestricted Use SCOs:**

15B3 (0-2ft) – PCB-1260 (170 µg/kg)

### **PCBs in Soil Above Restricted Residential Use SCOs:**

No PCBs were detected above NYSDEC Restricted Residential Use SCOs.

## *2.6.2 Analytical Results – Groundwater Samples*

A total of six (6) groundwater samples were collected from ten (6) groundwater monitoring wells for laboratory analysis of VOCs (EPA Method 8260), SVOCs (EPA Method 8270), TAL metals and pesticides/PCBs (EPA Method 8081/8082).

The results of groundwater samples collected during the RI are summarized in **Tables 8** through **12**. Several VOC, SVOC, dissolved metals and pesticides were detected in excess of the NYSDEC Division of Water, Technical & Operational Guidance Series 1.1.1, Ambient Water Quality Standards and Guidance Values (AWQS), June 1998.

### **VOCs in Groundwater Above NYSDEC AWQS:**

MW6 – Benzene (9.2 µg/L), Ethylbenzene (280 µg/L), Isopropylbenzene (95 µg/L), Naphthalene (1300 µg/L), n-Propylbenzene (20 µg/L), Toluene (12 µg/L)

### **SVOCs in Groundwater Above NYSDEC AWQS:**

MW1 - Benz(a)anthracene (0.51 µg/L), Benzo(b)fluoranthene (0.38 µg/L), Benzo(k)fluoranthene (0.41 µg/L), Chrysene (0.53 µg/L), Indeno(1,2,3-cd)pyrene (0.26 µg/L)

MW2 - Benz(a)anthracene (0.66 µg/L), Benzo(b)fluoranthene (0.46 µg/L), Benzo(k)fluoranthene (0.48 µg/L), Chrysene (0.63 µg/L), Indeno(1,2,3-cd)pyrene (0.3 µg/L)

MW3 - Benz(a)anthracene (0.09 µg/L), Benzo(b)fluoranthene (0.06 µg/L), Benzo(k)fluoranthene (0.06 µg/L), Chrysene (0.08 µg/L), Indeno(1,2,3-cd)pyrene (0.04 µg/L)

MW5 - Benz(a)anthracene (0.16 µg/L), Benzo(b)fluoranthene (0.12 µg/L), Benzo(k)fluoranthene (0.12 µg/L), Chrysene (0.15 µg/L), Indeno(1,2,3-cd)pyrene (0.08 µg/L)

Duplicate - Benz(a)anthracene (1.2 µg/L), Benzo(b)fluoranthene (0.9 µg/L), Benzo(k)fluoranthene (0.91 µg/L), Chrysene (1.2 µg/L), Indeno(1,2,3-cd)pyrene (0.57 µg/L)

#### **Pesticides in Groundwater Above NYSDEC AWQS:**

MW6 – Dieldrin (0.49 µg/L)

#### **PCBs in Groundwater Above NYSDEC AWQS:**

No PCBs in groundwater were detected.

#### **Dissolved Metals in Groundwater Above NYSDEC AWQS:**

MW1 - Magnesium (105 µg/L), Manganese (0.566 µg/L), Sodium (972 µg/L)

MW2 - Magnesium (61 µg/L), Manganese (4.11 µg/L), Sodium (295 µg/L)

MW3 - Magnesium (445 µg/L), Sodium (4,270 µg/L)

MW4 - Magnesium (639 µg/L), Sodium (4,860 µg/L)

MW5- Iron (82.9 µg/L), (Magnesium (471 µg/L), Manganese (1.3 µg/L), Sodium (3,480 µg/L)

MW6 - Magnesium (115 µg/L), Manganese (1.43 µg/L), Sodium (704 µg/L)

Duplicate - Magnesium (67.2 µg/L), Manganese (4.52 µg/L), Sodium (326 µg/L)

#### **Total Metals in Groundwater Above NYSDEC AWQS:**

Multiple metals were reported above standards in the unfiltered samples from all of the wells including antimony, arsenic, barium, cadmium, chromium, copper, iron, lead, magnesium, manganese, nickel, sodium and thallium.

Groundwater parameters reported above groundwater standards are presented in **Table 14** and posted on **Figure 7**.

#### *2.6.3 Analytical Results – Soil Vapor Samples*

In order to determine the vapor quality in the soil beneath the Site, soil vapor samples were collected from seven soil vapor implants (SV1, SV2, SV3, SV4, SV6, SV7 and SV8) installed at a depth of 2-

4 feet across the Site. SV5 malfunctioned and a sample was not collected. Analytical results were compared to the Summary of Background Levels for Selected Compounds (NYSDOH Database, Outdoor values, 2003).

Total petroleum-related VOCs (BTEX) ranged from 18.76  $\mu\text{g}/\text{m}^3$  @ SV-8 (interior northwest of Site) to 194.75  $\mu\text{g}/\text{m}^3$  @ SV-2 (north side of the Site).

Chlorinated VOCs (CVOCs) were reported in all of the soil vapor samples with Trichloroethylene (TCE) reported in three of the seven soil vapor samples, Tetrachloroethylene (PCE) reported in all seven samples, carbon tetrachloride was detected in one of the seven samples and 1,1,1-trichloroethane was detected on two of the seven samples. Detectable concentrations of TCE ranged from 0.53  $\mu\text{g}/\text{m}^3$  in SV1 located at the north side of the Site within the interior 1.39  $\mu\text{g}/\text{m}^3$  in SV located at the south side of the Site. PCE concentrations ranged from 0.94  $\mu\text{g}/\text{m}^3$  in SV7 located at the northeast side of the Site to 161  $\mu\text{g}/\text{m}^3$  in SV1 located at the north side of the Site. Detectable concentrations of 1,1,1-Trichloroethane ranged from 1.32  $\mu\text{g}/\text{m}^3$  in SV1 located at the north side of the Site to 6.71  $\mu\text{g}/\text{m}^3$  in SV4 located at the south side of the Site. Detectable concentrations of carbon tetrachloride were noted at 2.34  $\mu\text{g}/\text{m}^3$  in SV4 located at the south side of the Site.

Soil vapor results are summarized on **Table 13** and posted on **Figure 8**.

#### *2.6.4 Data Usability Summary Report*

Data validation services were provided by Alpha Geo Science of Clifton Park, New York and will be submitted to the NYSDEC upon receipt.

---

### 3.0 HYDROGEOLOGIC ASSESSMENT AND PHYSICAL SETTING

#### 3.1 Site Topography

According to the USGS topographic map for the area (Central Park Quadrangle), the elevation of the property is approximately 10 feet above the National Geodetic Vertical Datum (NGVD). The area topography gradually slopes to the west.

#### 3.2 Surrounding Land Use

The area surrounding the property is highly urbanized and predominantly consists of heavy commercial / industrial / warehouse properties to the north along a corridor adjacent to the Harlem River. Multi-use residential / commercial (retail) properties are present to the east along Bruckner Boulevard and a large housing project is located to the northeast.

#### 3.3 Regional Geology / Hydrogeology

The bedrock geology at the property and in the immediate vicinity consists of Inwood Marble of Lower Ordovician to Lower Cambrian age with steep westerly dip of its upper surface. The depth to bedrock is anticipated at approximately 20 to 30 feet below land surface (ft-bls). Bedrock is overlain by an unconsolidated overburden of an unsorted heterogeneous mix of Pleistocene and Recent glacial material (i.e., glacial till) including clay, silt, sands, gravel, cobbles, and boulders. This overburden is overlain by historic urban fill.

#### 3.4 Site Geology / Hydrogeology

The bedrock geology at the property and immediate vicinity consists of Inwood Marble of Lower Ordovician to Lower Cambrian age with steep westerly dip of its upper surface. The depth to bedrock is anticipated at approximately 20 to 30 feet below land surface (ft-bls). Bedrock is overlain by an unconsolidated overburden of an unsorted heterogeneous mix of Pleistocene and Recent glacial material (i.e., glacial till) including clay, silt, sands, gravel, cobbles, and boulders. This overburden is overlain by historic urban fill.

Subsurface soils at the Site consist of historic fill materials to a depth of approximately 5 feet below grade extending to 15 ft in some areas. Brown sand, grey sand, dark brown sand clay, grey black clay with rock is present immediately below this layer. According to the USGS topographic map for the area (Central Park Quadrangle), the elevation of the property is approximately 5 feet above mean sea level. The topography within the immediate area slopes gradually to west.

Groundwater occurs beneath the Site at a depth of 6 to 7 feet below grade (**Table 2**) under water table conditions. Based upon on-site measurements, groundwater flow is to the west and west to southwest (**Figure 5**).

## 4.0 NATURE AND EXTENT OF CONTAMINATION

### 4.1 Identification of Source Areas

The source area identified during the RI is the petroleum contamination in the soil on the northwest side of the Site.

Historic fill material has been identified across the Site to depths as great as 5 feet below grade. The historic fill material contains SVOCs, metals including arsenic, chromium, copper, lead, mercury, nickel and zinc above unrestricted and / or restricted use SCOs.

### 4.2 Groundwater Impacts

Several petroleum-related compounds; benzene (9.2 ug/L), ethylbenzene (280 ug/L), isopropylbenzene (95 ug/L), naphthalene (1,300 ug/L), n-propylbenzene (20 ug/L) and toluene (12 ug/L) above standards at one monitoring well location (MW6) located on the west side of the Site.

SVOC detections above groundwater standards were detected for naphthalene (at 720 ug/L), benz(a)anthracene (maximum of 1.2 ug/L), benzo(b)fluoranthene (maximum of 0.46 ug/L), benzo(k)fluoranthene (maximum of 0.91 ug/L), chrysene (maximum of 1.2 ug/L) and indeno (1,2,3-cd), pyrene (maximum of 0.57 ug/L) in MW1, MW2, MW3, MW5, MW6 and MW7.

One pesticide was detected at concentrations above NYSDEC AWQS standards; Dieldrin in MW6. No PCBs were detected in any of the groundwater samples.

Several dissolved metals were detected above standards. Sodium and magnesium were detected above standards in all six of the sampled monitoring wells. Manganese was detected above standards in MW1, MW2, MW5 and MW6. Iron was detected above standards at 14MW8 and iron was detected above guidance values at MW5.

### 4.3 Soil-Vapor Impacts

Total petroleum-related VOCs (benzene, toluene, ethylbenzene, and xylene "BTEX") ranged from 18.76  $\mu\text{g}/\text{m}^3$  in SV8 to 194.75  $\mu\text{g}/\text{m}^3$  in SV2 which was collected on the north side of the Site. Total BTEX compounds ranged from 5.17  $\mu\text{g}/\text{m}^3$  (SS-4) to 69.38  $\mu\text{g}/\text{m}^3$  (SG-7) at all other soil vapor locations.

Chlorinated VOCs (CVOCs) were reported in all of the soil vapor samples with Tetrachloroethene (PCE) reported in all seven soil vapor samples. Carbon Tetrachloride, trichloroethene and 1,1,1-trichloroethane were detected in several of the soil vapor samples and had relatively low detections. Detectable concentrations of PCE ranged in concentration from 0.94  $\mu\text{g}/\text{m}^3$  in SV7 located at the northeast side of the Site within the building to 161  $\mu\text{g}/\text{m}^3$  in SV1 located on the north side of the Site within the building. Detectable concentrations of carbon tetrachloride were noted at 0.29  $\mu\text{g}/\text{m}^3$  in SV4 located at the southwest side of the Site. 1,1,1-Trichloroethane concentrations ranged from 1.32  $\mu\text{g}/\text{m}^3$  in SV1 located on the north side of the Site to 6.71  $\mu\text{g}/\text{m}^3$  from SV4 located in the

southwest side of the Site. Concentrations of trichloroethene ranged from 0.53  $\mu\text{g}/\text{m}^3$  from SV1 located on the north side of the Site to 1.39  $\mu\text{g}/\text{m}^3$  from SV1 located on the southwest side of the Site.

#### **4.4 Site Conceptual Model**

VOC contamination at the Site consists of petroleum related contaminants in soil at a depth of 12-14 feet in the northwestern portion of the Site and to a lesser degree in the southwestern portion of the Site.

Several petroleum VOCs were reported at elevated concentrations in one monitoring well in the vicinity of the northwestern impacted soil area indicating that some of the VOC impacted soil has transferred to the dissolved phase in this area.

PCE in soil vapor was reported in all locations with the highest concentration noted in the northeast corner of the property. The PCE present in the vapor phase appears to be migrating on site from an off-site source since PCE was not reported in any of the soil or ground water samples.

---

## 5.0 QUALITATIVE EXPOSURE ASSESSMENT

The objective of the qualitative exposure assessment under the Brownfields Cleanup Program (BCP) is to identify potential receptors to the contaminants of concern (COC) that are present at, or migrating from, the Site. The identification of exposure pathways describes the route that the COC takes to travel from the source to the receptor. An identified pathway indicates that the potential for exposure exists; it does not imply that exposures actually occur. An exposure pathway has five elements; a contaminant source, release and transport mechanisms, point of exposure, route of exposure and a receptor population.

The potential exposure pathways identified below, represent both current and future exposure scenarios.

### 5.1 Contaminant Source

Source areas of the Site include petroleum VOCs located on the northwest side of the Site, which is likely associated with a historic release.

Elevated levels of metals, PAHs, PCBs and pesticides are also present in fill materials throughout the Site.

### 5.2 Contaminant Release and Transport Mechanism

Petroleum contamination is present in soil on the northwest side of the Site. The contamination extends vertically below the groundwater interface to a depth of 14 feet. There appears to be transfer of petroleum related VOC contaminants in soil to the groundwater.

There does not appear to be any transfer of petroleum VOCs to the vapor phase in close proximity to the source area (15B6 12-14 feet). Elevated PCE was noted in SG1 and appears to be migrating on site from an off-site source. PCE was not noted in any one site soil and groundwater samples.

### 5.3 Point of Exposure, Route of Exposure and Potentially Exposed Populations

Potential On-Site Exposures: Remediation workers and construction workers engaged in the excavation of impacted and non-impacted soil at the site may be exposed to petroleum VOCs / SVOCs, CVOCs, pesticides and heavy metals through several routes. Workers excavating impacted soil may be exposed to VOCs, SVOCs, pesticides and heavy metals through inhalation, ingestion and dermal contact. A site specific Health and Safety Plan has been developed to identify and minimize the potential hazards to on-site workers.

Site trespassers could also be exposed to impacted soil during excavation, however, security measures including an 8 ft high construction fence and 24 hr security will minimize potential exposure through this route.

Future occupants of the new building including commercial retail workers, residents and visitors could be exposed to SVOCs and heavy metals in soil through ingestion and dermal contact if these contaminants were to remain in exposed soils at the Site. Vapor intrusion of PCE is a potential concern for residents and commercial retail workers of the planned construction in the northwest corner of the Site although the concentration was lower than typical action levels. CVOCs in soil vapor appear to be migrating on site from an off-site source.

Potential Off-Site Exposures: Off-Site residents could also be exposed to dust or vapors during the excavation of impacted soil. A site specific Community Air Monitoring Plan has been developed to identify and minimize the potential for off-site exposure to residents through continuous air monitoring during excavation activity.

The entire area is serviced by the New York City Water System which distributes water from the Croton Reservoir system. Since there are no public or private potable supply wells in the area, exposure from contact with tap water is not a concern.

Based on the soil vapor results, soil vapor does not appear to be migrating off site and therefore off-site exposure was not identified.

Potential Off-Site Environmental Impacts: Since petroleum VOCs in groundwater may be migrating beneath the Site in a south to southwest direction, the groundwater to surface water discharge pathway was evaluated. The nearest surface water to the Site is the Harlem River located adjacent to the west of the Site.

## **6.0 CONCLUSIONS AND RECOMMENDATIONS**

Subsurface soils at the Site include a silt and sand non-native fill with bricks, concrete, coal and other rubble to a depth of approximately 5 feet below grade. A native sand and clay is present below the fill to a depth of approximately 12 feet below grade. The fill material contains elevated levels some metals, pesticides PCBs and SVOCs.

Groundwater at the Site is present at a depth of approximately 6-7 feet below surface grade and flows in a west / southwestern direction towards the Harlem River.

The results of sampling performed during this RI identified petroleum VOC contamination in soil on the northwest side of the Site. The contamination is below the water table interface to a depth of 14 feet below grade.

Historic fill material has been identified across the Site to depths as great as 5 feet below grade. The historic fill material contains metals, SVOCs, PCBs and pesticides above unrestricted and / or restricted use SCOs.

Groundwater is impacted with petroleum VOCs immediately in the source area.

Soil vapor sampling identified petroleum- related volatile organic compounds (BTEX). Chlorinated VOCs (CVOCs) were reported in almost all of the soil vapor samples with the highest concentrations reported on the north side of the Site. CVOCs were noted in the soil or groundwater and which suggests an off-site source.

The qualitative exposure assessment identified potential completed routes of exposure to construction workers and remediation workers through inhalation, ingestion and dermal contact of petroleum compounds, CVOCs, pesticides, PCBs and heavy metals during excavation activities. The Health and Safety Plan prepared for the site identifies such exposures and provides instructions for on-site workers to minimize potential exposure. Occupants in the proposed on-site commercial buildings may be exposed to CVOCs through the vapor intrusion pathway, if remedial action is not taken to prevent off site vapor intrusion.

The exposure assessment indicated a limited potential exposure to residents and commercial workers in adjacent buildings which would be reduced further following the removal of the identified source areas.

Potential environmental impacts through the groundwater to surface water discharge were considered likely based on the distance to the Harlem River.

Recommendations include removal of the onsite USTs, excavation and disposal of petroleum a contaminated soil within the source areas and proper handling and disposal of all soils excavated for structural elements of the new building. This work would be performed under an approved Remedial Action Work Plan (RAWP) which will include a Soil Management Plan, a Construction Health and Safety Plan and a Community Air Monitoring Plan.

Notes:

RL- Reporting limit

ND - Non-detect

ND\* - Due to matrix interference from non target compounds in the sample an elevated RL was reported.

**Bold/highlighted-** Indicated exceedance of the NYSDEC Groundwater Standard

## 15B4 Boring Log

Location: Performed on S corner of Site		Depth to Water (ft. from grade.)	Site Elevation Datum
Site Name: NYD1503	Address: 101 Lincoln Ave, Bronx, NY	Date	DTW
		Groundwater depth	
Drilling Company: C <sup>2</sup> Environmental	Method: Geoprobe	6'	
Date Started: 12/4/2015	Date Completed: 12/4/2015	Well Specifications	
Completion Depth: 15 feet	Geologist Kevin Waters	None	

15B4 (NTS)	DEPTH (ft below grade)	SAMPLES			SOIL DESCRIPTION
		Recovery (in.)	Blow per 6 in.	PID (ppm)	
	0				
	to	19		0.0	Black coarse fill gravel w/ brick and concrete
	5				no odor <i>*Retained soil sample 15B4(0-2)</i>
	to	12		0.0	brown coarse-fine sand and rock
	10				No odor
	to	10		0.0	grey coarse -fine sand and rock
	15				<i>*Retained soil sample 15B4(12-14)</i>

# Geologic Boring Log Details

## 15B7 Boring Log

Location: Performed inside the large building on the E side.		Depth to Water (ft. from grade.)	Site Elevation Datum
Site Name: NYD1503	Address: 101 Lincoln Ave, Bronx, NY	Date	DTW
		Groundwater depth  7'	
Drilling Company: C <sup>2</sup> Environmental	Method: Geoprobe	Well Specifications  None	
Date Started: 12/7/2015	Date Completed: 12/7/2015		
Completion Depth: 15 feet	Geologist Greg Swirson		

15B7 (NTS)	DEPTH (ft below grade)	SAMPLES			SOIL DESCRIPTION	
		Reco- very (in.)	Blow per 6 in.	PID (ppm)		
	0					
	to	20		0.0	3"- Concrete 9"- Brown Silt 8"- Black coal	
	5				<i>*Retained soil sample 15B7(0-2)</i>	
	to	27		0.0	5"- Dark Brown Shell/Sand mix 22"- Grey Clay  Sulfur odor	
	10					
	to	31		0.0	Brown clay-sand mix  Sulfur odor <i>*Retained soil sample 15B7(12-14)</i>	
	15

***Laboratory Reports (On Disk)***

Friday, February 05, 2016

Attn: Mr. Charles B. Sosik, P.G.  
Environmental Business Consultants  
1808 Middle Country Rd  
Ridge NY 11961-2406

Project ID: 101 LINCOLN AVE., BRONX  
Sample ID#s: BK34071 - BK34078

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

Enclosed are revised Analysis Report pages. Please replace and discard the original pages. If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

A handwritten signature in black ink that reads "Phyllis Shiller". The signature is written in a cursive style.

## SDG Comments

February 05, 2016

SDG I.D.: GBK34071

---

Version 1: Analysis results minus QC and forms.

Version 2: Complete report with QC and forms.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

BK34076 - Client high level could not be analyzed. Methanol had leaked from vial Sample weight and dilution could not be determined. Phoenix prepared sample per method 5035.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
 B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

**Comments:**

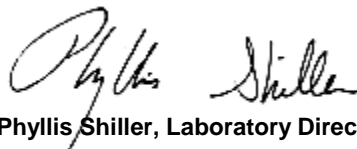

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.  
 This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
 B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

**Comments:**

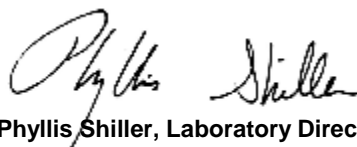

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

 B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

**Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

**Volatile Comment:**

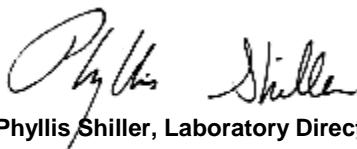

Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds, some compounds were evaluated below the lowest calibration standard in order to achieve the request reporting criteria.

**Pesticide Comment:**

Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, an elevated RL was reported.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
 B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

**Comments:**

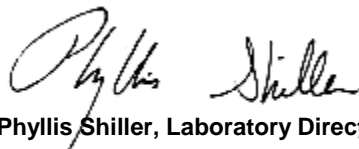

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
 B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

**Comments:**

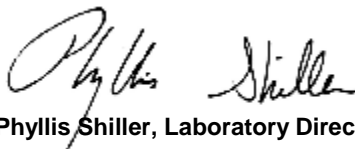

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.  
 This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
 3 = This parameter exceeds laboratory specified limits.  
 B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit  
 QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

**Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

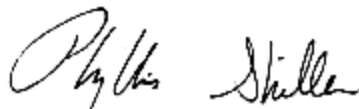

**Volatile Comment:**

Sample exhibited matrix interference in the volatile analysis. Both Low-level vials were analyzed with one or more poor internal standard responses. The high level analysis did not exhibit this interference. Had any compounds been detected in the high level analysis, they would have been reported at that dilution. The low level analysis was reported, in order to meet the requested reporting criteria.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
 B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

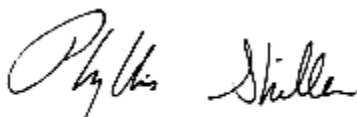

**Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.  
 This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
 B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

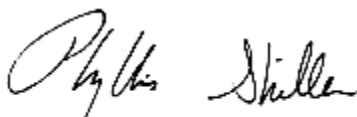

**Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.  
 This report must not be reproduced except in full as defined by the attached chain of custody.

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

Sample ID#s: BK33362 - BK33378

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

Enclosed are revised Analysis Report pages. Please replace and discard the original pages. If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

A handwritten signature in black ink that reads "Phyllis Shiller". The signature is written in a cursive style.

## Methodology Summary

### **Volatiles**

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods 3rd Ed. Update V, Method 8260C and Environmental Protection Agency, EPA-600/4-79-020, Revised March 1983 (Methods 624) as printed in 40CFR part 136.

### **Accelerated Solvent Extraction (ASE)**

Soil Sample - USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods 3rd Ed. Update III, Method 3545A.

### **Mercury Prep**

Soil Sample - USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods 3rd Ed. Update IV, Method 7471B.

### **Metals**

ICP :

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods 3rd Ed. Update IV, Method 6010C.

Mercury:

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, 7471

### **Pesticides:**

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods 3rd Ed. Update IV, Method 8081B.

### **Polychlorinated Biphenyls (PCBs):**

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods 3rd Ed. Update IV, Method 8082A.

### **Semivolatile Organic Compounds**

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods 3rd Ed. Update IV, Method 8270D.

## SDG Comments

January 14, 2016

SDG I.D.: GBK33362

---

Version 1: Analysis results minus QC and forms.

Version 2: Complete report with QC and forms.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
 B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

**Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

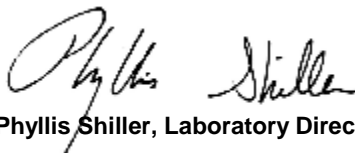

**Pesticide Comment:**

Due to matrix interference caused by the presence of PCBs in the sample, an elevated RL was reported.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

### Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

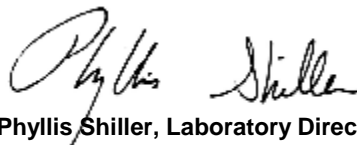

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
 B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

**Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

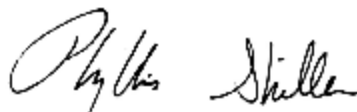

**Volatile Comment:**

Sample exhibited matrix interference in the volatile analysis. Both Low-level vials were analyzed with one or more poor internal standard responses. The high level analysis did not exhibit this interference. Had any compounds been detected in the high level analysis, they would have been reported at that dilution. The low level analysis was reported for some compounds in order to meet the requested reporting criteria.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
 B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

**Comments:**

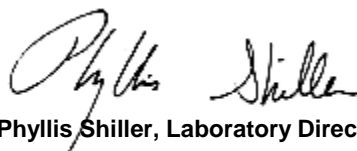

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.  
 This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
 B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

**Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

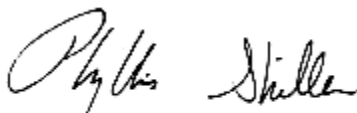

**Volatile Comment:**

Sample exhibited matrix interference in the volatile analysis. Both Low-level vials were analyzed with one or more poor internal standard responses. The high level analysis did not exhibit this interference. Had any compounds been detected in the high level analysis, they would have been reported at that dilution. The low level analysis was reported for some compounds in order to meet the requested reporting criteria.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
 B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

**Comments:**

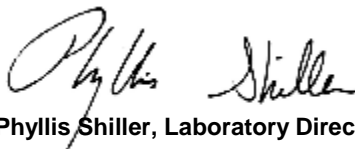

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.  
 This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
 B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

**Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

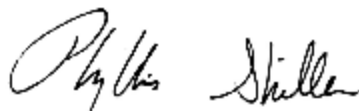

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

**Volatile Comment:**

There was a suppression of the last internal standard in the low level analysis, all affected compounds are reported from the methanol preserved high level analysis which did not exhibit this interference.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
 B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

**Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

**Volatile Comment:**

There was a suppression of the last internal standard in the low level analysis, all affected compounds are reported from the methanol preserved high level analysis which did not exhibit this interference.

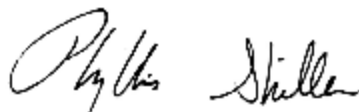

**Pesticide Comment:**

Due to matrix interference caused by the presence of PCBs in the sample, an elevated RL was reported.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

### Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

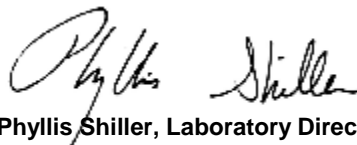

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
 B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

**Comments:**

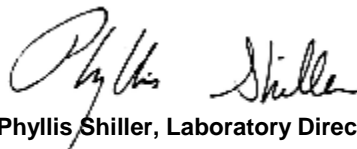

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.  
 This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
 B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

**Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

**Volatile Comment:**

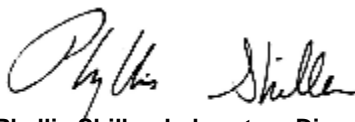

There was a suppression of the last internal standard in the low level analysis, all affected compounds are reported from the methanol preserved high level analysis which did not exhibit this interference.

\*\*Poor internal standard recovery was observed for volatiles. Sample was analyzed twice with similar results indicating matrix interference.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
 B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

**Comments:**

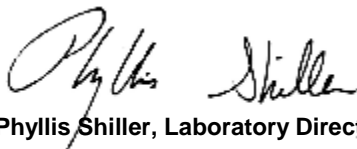

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.  
 This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
 B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

**Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

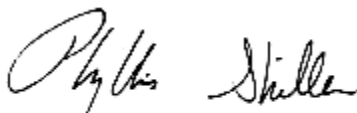

**Volatile Comment:**

Sample exhibited matrix interference in the volatile analysis. Both Low-level vials were analyzed with one or more poor internal standard responses. The high level analysis did not exhibit this interference. Had any compounds been detected in the high level analysis, they would have been reported at that dilution. The low level analysis was reported for some compounds in order to meet the requested reporting criteria.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

3

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
 3 = This parameter exceeds laboratory specified limits.  
 B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit  
 QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

**Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

**Semi-Volatile Comment:**

Poor surrogate recovery was observed for one acid and/or one base surrogate. The other surrogates associated with this sample were within QA/QC criteria. No significant bias suspected.

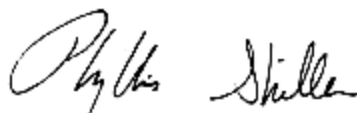

**Volatile Comment:**

There was a suppression of the last internal standard in the low level analysis, all affected compounds are reported from the methanol preserved high level analysis which did not exhibit this interference.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
 B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

**Comments:**

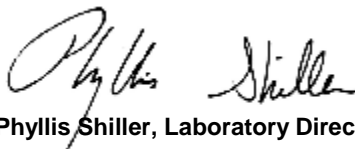

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.  
 This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
 B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

**Comments:**

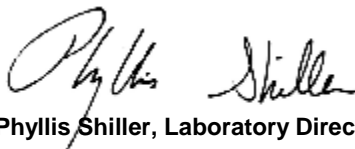

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.  
 This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
 B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

**Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

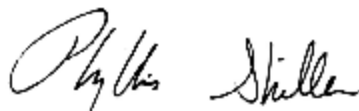

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

**Volatile Comment:**

There was a suppression of the last internal standard in the low level analysis, all affected compounds are reported from the methanol preserved high level analysis which did not exhibit this interference.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.  
 This report must not be reproduced except in full as defined by the attached chain of custody.

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

## Methodology Summary

### **Volatiles**

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods 3rd Ed. Update V, Method 8260C and Environmental Protection Agency, EPA-600/4-79-020, Revised March 1983 (Methods 624) as printed in 40CFR part 136.

### **Mercury**

Methods for Chemical Analyses of Water and Wastes, EPA, Environmental Monitoring Systems Laboratory Cincinnati (EMSL-CL), EPA-600/4-79-020, method 245.1  
USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, 7470A.

### **Metals**

ICP :  
USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods 3rd Ed. Update IV, Method 6010C.  
Mercury:  
USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, 7471

### **Pesticides:**

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods 3rd Ed. Update IV, Method 8081B.

### **Polychlorinated Biphenyls (PCBs)/Pesticides:**

Environmental Protection Agency, EPA-600/4-79-020, Revised March 1983 (Methods 608) as printed in 40CFR part 136.

### **Semivolatile Organic Compounds**

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods 3rd Ed. Update IV, Method 8270D.

### **Semi-volatiles analysis**

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods 3rd Ed. Update IV, Method 8270D (SIM - selective ion monitoring mode).

## SDG Comments

January 11, 2016

SDG I.D.: GBK34758

---

Version 1: Analysis results minus QC and forms.

Version 2: Complete report with QC and forms.

8260 Volatile Organics:

1,2-Dibromoethane, 1,2,3 Trichloropropane, and 1,2-Dibromo-3-chloropropane do not meet NY TOGS GA criteria, these compounds are analyzed by GC/FID method 504 or 8011 to achieve this criteria.

SIM Analysis:

The lowest possible reporting limit under SIM conditions is 0.02 ug/L. The NY TOGS GA criteria for some PAHs is 0.002 ug/L. This level can not be achieved.

Toxaphene is reported to the lowest possible reporting level. The NY TOGS criteria for this compound can not be achieved.

-----------	--------	------------	-------------	-------	----------	-----------	----	-----------

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

**Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

**Pesticide Comment:**

Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, an elevated RL was reported.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

-----------	--------	------------	-------------	-------	----------	-----------	----	-----------

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
 3 = This parameter exceeds laboratory specified limits.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit  
 QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

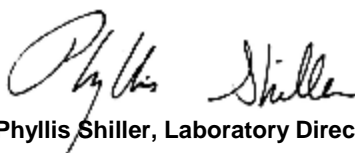

**Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

**Semi-Volatile Comment:**

One of the surrogate recoveries was above the upper range due to sample matrix interference. The other surrogates associated with this sample were within QA/QC criteria. No significant bias is suspected.

-----------	--------	------------	-------------	-------	----------	-----------	----	-----------

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
 3 = This parameter exceeds laboratory specified limits.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

**Comments:**

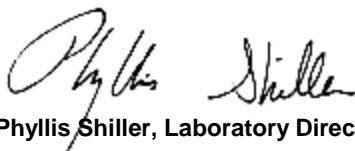

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

**Semi-Volatile Comment:**

Poor surrogate recovery was observed for one acid and/or one base surrogate. The other surrogates associated with this sample were within QA/QC criteria. No significant bias suspected.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

Parameter	Result	RL/ PQL	LOD/ MDL	Units	Dilution	Date/Time	By	Reference
-----------	--------	------------	-------------	-------	----------	-----------	----	-----------

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
 3 = This parameter exceeds laboratory specified limits.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit  
 QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

**Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

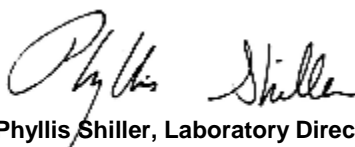

**Semi-Volatile Comment:**

Poor surrogate recovery was observed for one acid and/or one base surrogate. The other surrogates associated with this sample were within QA/QC criteria. No significant bias suspected.

**Volatile Comment:**

Due the presence of material that causes the sample to "foam" on the instrument, this sample required a dilution, some compounds are evaluated below the lowest calibration standard.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
 3 = This parameter exceeds laboratory specified limits.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit  
 QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

**Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

**PCB Comment:**

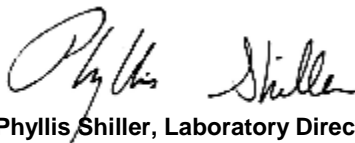

Poor surrogate recovery was observed for PCBs. Sample was re-extracted with similar results.

**Pesticide Comment:**

Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, an elevated RL was reported. Sample was evaluated against an external standard.

S - Laboratory solvent, contamination is possible.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit  
QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

**Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

**Volatile Comment:**

Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds. Some compounds were evaluated below the lowest calibration standard in order to meet the requested reporting level when possible.

**Semi-Volatile Comment:**

Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, a dilution was required resulting in an elevated RL for the semivolatile analysis.

**Pesticide Comment:**

Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, an elevated RL was reported. Sample was evaluated against an external standard.

Parameter	Result	RL/ PQL	LOD/ MDL	Units	Dilution	Date/Time	By	Reference
-----------	--------	------------	-------------	-------	----------	-----------	----	-----------

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
 3 = This parameter exceeds laboratory specified limits.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit  
 QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

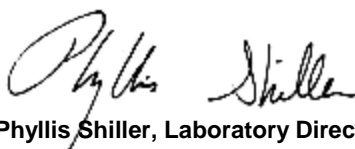

**Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Volatile Comment:  
 Elevated reporting limits due to the foamy nature of the sample.

Semi-Volatile Comment:  
 One of the surrogate recoveries was above the upper range due to sample matrix interference. The other surrogates associated with this sample were within QA/QC criteria. No significant bias is suspected.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

% Dibromofluoromethane	101	%	98	99	1.0				70 - 130	30
% Toluene-d8	100	%	99	102	3.0				70 - 130	30

Comment:

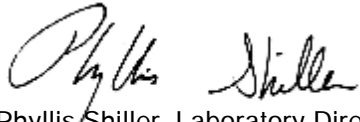

A LCS and LCS Duplicate were performed instead of a matrix spike and matrix spike duplicate.

l = This parameter is outside laboratory LCS/LCSD specified recovery limits.

r = This parameter is outside laboratory RPD specified recovery limits.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

- RPD - Relative Percent Difference
- LCS - Laboratory Control Sample
- LCSD - Laboratory Control Sample Duplicate
- MS - Matrix Spike
- MS Dup - Matrix Spike Duplicate
- NC - No Criteria
- Intf - Interference

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

Enclosed are revised Analysis Report pages. Please replace and discard the original pages. If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

A handwritten signature in black ink that reads "Phyllis Shiller". The signature is written in a cursive style.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

**Comments:**

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

## **EXECUTIVE SUMMARY**

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C. (Langan) was retained by Lincoln Avenue Associates, LLC (the "User") to prepare a Phase I Environmental Site Assessment (ESA) for the property located at 101 Lincoln Avenue in the Mott Haven section of the Bronx, New York ("Site"). The Site (Block 2316, Lot 1) is comprised of an approximate 133,700-square-foot irregularly shaped lot and contains a parking lot and a one-story, L-shaped warehouse building with a connected two-story office building encompassing approximately 83,064 square feet. The Site is bordered to the northeast by Bruckner Boulevard, to the southeast by Lincoln Avenue, to the southwest by Block 2316, Lot 35 followed by the Harlem River, and to the northwest by the Third Avenue Bridge. The Site has an "E" designation for air, noise, and hazardous materials as a result of the Port Morris/Bruckner Boulevard Rezoning (CEQR # 05DCP005X).

This Phase I ESA was conducted in accordance with the American Society for Testing Materials (ASTM) Practice E1527-13 (Standard Practice for ESA: Phase I ESA Process) and the United States Environmental Protection Agency's (USEPA) All Appropriate Inquiry (AAI) Rule. The objective of this Phase I ESA was to identify the presence or likely presence, use, or release on the Site of hazardous substances or petroleum products as defined in ASTM E1527-13 as a recognized environmental condition (REC) and to satisfy the AAI needed to qualify for the bona fide prospective purchaser liability protections available under the Comprehensive Environmental Response Compensation and Liability Act (CERCLA).

The Phase I ESA identified the following RECs for the Site:

### REC 1 – Current and Historical Site Use

The following current and historical property uses are considered a REC:

- Coal Storage from approximately 1891 to 1908;
- New Jersey Rail Road Bronx Freight terminal from approximately 1908 through the 1950s; and
- Crane repair, paint shop, blacksmith shop, bus depot, and vehicle repair shop from approximately 1968 to present.

The Site is presently divided into two sections with Third Avenue Transit Inc. occupying the eastern portion of the Site and Oz Moving & Storage occupying the western portion. Third Avenue Transit Inc. utilizes the Site for storage of equipment & materials, school bus repairs,

and as office space. There is an oil-water separator with an apparent leak detection system in the middle of the Third Avenue Transit warehouse building. The condition of the oil-water separator system is unknown. Oz Moving & Storage utilizes the Site for the storage of equipment, materials and vehicles, and vehicle repair. Vehicle repair equipment and discolored and stained floors are apparent throughout the building. Inadvertent and/or incidental releases of solvents, petroleum products, polychlorinated biphenyls (PCBs) and/or other chemicals used during operations at these facilities may have adversely impacted soil, soil vapor and groundwater.

#### REC 2 – On-Site Closed-In-Place Underground Storage Tanks

Twelve 550-gallon diesel underground storage tanks (UST), two 550-gallon gasoline USTs, one 1,000-gallon motor oil UST, and one 1,000-gallon waste oil UST were closed-in-place between 1991 and 1992. Evidence of historical diesel fuel contamination was observed following the collection six soil samples around the tanks in 1991 (concentrations of TPH ranging from 69 to 246 ppm). Inadvertent releases from these tanks while they were active may have impacted soil, soil vapor, and groundwater. Based on the historic usage and the presumed age of the tanks (approximately 44 years), the closed-in-place USTs are a REC.

#### REC 3 – Potential Historic Petroleum Storage

An apparent fill port was identified in the sidewalk along the northwestern edge of the Site. There are no records of a petroleum bulk storage tank near the apparent fill port. Based on the potential presence of tanks and lack of any closure documentation, the fill port and potential petroleum tank(s) are a REC.

#### REC 4 – Soil Staining

Petroleum-like staining and odors were identified along the southwestern corner of the building during the site reconnaissance. A petroleum release may have impacted soil, soil vapor and groundwater and is considered a REC. According to the NYC Department of Finance Tax Map, an approximate 50-foot wide sliver of land (Block 2316, Lot 35) exists between the Site and the Harlem River; therefore, the observed soil staining may be located outside the Site property line.

#### REC 5 – Historical Use of Surrounding Properties

Historical use of properties surrounding the Site include commercial buildings with office space, lofts, auto repairs (1908 – present), parking garages (1951 – 1968), manufacturing facilities

(1891 – 1946), freight depots (1891 – 1947), a piano factory (1891), printing (1935 – 1947), and woodworking (1891). Additionally, an active New York State Department of Environmental Concern (NYSDEC) Brownfields Site was identified approximately 745 feet northeast (up-gradient) of the Site. Based on investigations conducted to date, the primary contaminants of concern in soil and groundwater are petroleum related compounds. No information was provided with respect to the off-site migration of contaminants; however, the Environmental Database Report (EDR) report indicates that the potential exists for off-site migration of site-related contaminants in soil vapor. Potential petroleum and solvent releases associated with the historical surrounding property uses may have adversely impacted soil, groundwater, and/or soil vapor at the Site and is, therefore, considered a REC.

Historic RECs (HRECs), Controlled RECs (CRECs) or de minimis conditions were not identified.

### **Non-ASTM Matters**

#### Asbestos, Lead, and Polychlorinated Biphenyls

A formal survey to identify asbestos containing materials (ACM), lead-based paint (LBP), and PCBs in building materials was not conducted as part of this Phase I ESA. Based on the age of the building, ACM, LBP, and PCB-containing materials are likely present.

#### Radon

According to the New York State Department of Health (NYSDOH), a total of 31 radon tests have been conducted in Bronx County with results indicating that 4% of living areas and 58% of basements have radon concentrations above 4 picocuries per liter (pCi/L). Based on this data, there is a potential for radon to accumulate in buildings; radon represents an environmental concern.

## **1.0 INTRODUCTION**

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C. (Langan) was retained by Lincoln Avenue Associates, LLC (the "User") to prepare a Phase I Environmental Site Assessment (ESA) for the property located at 101 Lincoln Avenue (Block 2316, Lot 1) in the Mott Haven section of the Bronx, New York ("Site"). This Phase I ESA was performed in support of the User's due diligence prior to acquiring the Site.

### **1.1 Purpose**

The purpose of this Phase I ESA is to accomplish the following:

(1) Identify Recognized Environmental Conditions (RECs) in connection with the Subject Property, as defined in The Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, Designation E1527-13, which states: The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

(2) Satisfy the criteria of United States Environmental Protection Agency (USEPA) 40 Code of Federal Regulations (CFR) Part 312 Subpart C Standards and Practices §312.20 AAI Rule.

### **1.2 Scope of the ESA**

This Phase I ESA was conducted utilizing a standard of good commercial and customary practice that is consistent with American Society for Testing and Materials (ASTM) E1527-13. Any significant scope-of-work additions, deletions, or deviations to ASTM E1527-13 are noted in Section 8 of this report. In general, the scope of this assessment consisted of obtaining information from the User; reviewing reasonably ascertainable information and environmental data relating to the Site; reviewing maps and records maintained by federal, state, and local regulatory agencies; interviewing persons knowledgeable about the Site; and conducting a site inspection. The specific scope of this assessment included the following:

1. A Site Reconnaissance to characterize conditions and assess the Site's location with respect to adjoining and surrounding property uses and natural surface features. The reconnaissance included the surrounding roads and observations of surrounding properties from public rights-of-way to identify obvious potential environmental conditions on neighboring properties. The site reconnaissance was conducted in a systematic manner focusing on the spatial extent of the Site and then progressing to adjacent and surrounding properties. Photographs taken as part of the site reconnaissance are provided in Appendix A.
2. A review of ASTM Practice E 1527-13 User and Owner Questionnaires. Copies of these questionnaires are included in Appendix B.
3. A review of available previous environmental reports completed for the Site. Copies of the reports are included as Appendix C.
4. A review of environmental databases maintained by the USEPA, state, and local agencies within the approximate minimum search distance. The environmental database report was provided by EDR, and the report is included in Appendix D.
5. Freedom of Information Act (FOIA) requests were sent to federal, state, and local agencies. Copies of the FOIA requests and responses are included in Appendix E.
6. New York City Department of Buildings (NYCDOB) records, a Planning Commission Zoning Map, and New York City Department of Finance (NYCDOF) records were reviewed. Available Deed Records, NYCDOB records and the Zoning Map and Tax Map information are included in Appendices F, G, H, and I respectively.
7. A review of physical characteristics of the Site through a review of referenced sources for topographic, geologic, soils, and hydrologic data.
8. A review and interpretation of aerial photographs, Sanborn Fire Insurance Maps (Sanborn Maps), historical topographic maps, and city directories to identify previous activities on and in the vicinity of the Site. Copies are included in Appendices J, K, L, and M, respectively.
9. A review of an Environmental Lien search for the Site. A copy of the environmental lien search report is included in Appendix N.

10. A review of published radon occurrence maps to determine if the Site is located in an area with a propensity for elevated radon levels. A USEPA Radon Map is provided in Appendix O.

### **1.3 Assumptions, Limitations, and Exceptions**

This Phase I ESA was prepared for Lincoln Avenue Associates, LLC for the Site located at 101 Lincoln Avenue in the Mott Haven section of the Bronx, New York. The report is intended to be used in its entirety. Excerpts taken from this report are not necessarily representative of the assessment findings. Langan cannot assume responsibility for use of this report for any property other than the Site addressed herein, or by any other third party without a written authorization from Langan.

Langan's scope of services, which is described in Section 1.2, was limited to that agreed to with the User and no other services beyond those explicitly stated are implied. The services performed and agreed upon for this effort comports to those prescribed in the ASTM Standard E1527-13. Intrusive sampling (i.e. soil borings and groundwater sampling) was not performed as part of this Phase I ESA.

This Phase I ESA was not intended to be a definitive investigation of possible environmental impacts at the Site. The purpose of this investigation was limited to determining if there is reason to suspect the possibility of RECs at the Site. It should be understood that even the most comprehensive Phase I ESA may fail to detect environmental liabilities at a particular site. Therefore, Langan cannot "insure" or "certify" that the Site is free of environmental impacts. No expressed or implied representation or warranty is included or intended in this report, except that our services were performed, within the limits prescribed by our client, with the customary standard of care exercised by professionals performing similar services under similar circumstances within the same jurisdiction.

The conclusions, opinions, and recommendations provided in this report are based solely on the specific activities as required for the performance of ASTM E1527-13 and are intended exclusively for the purpose stated herein, at the specified Site, as it existed at the time of our site visit.

## 2.0 SITE DESCRIPTION

### 2.1 Location and Description

The Site (Block 2316, Lot 1) is comprised of an approximate 133,700-square-foot irregularly shaped lot and contains a parking lot and a one-story, L-shaped warehouse building with a connected two-story office building encompassing approximately 83,064 square feet. The building is situated along the north, northwest, and eastern portions of the site boundary. The Site is bordered to the northeast by Bruckner Boulevard, to the southeast by Lincoln Avenue, to the southwest by Block 2316, Lot 35 followed by the Harlem River, and to the northwest by the Third Avenue Bridge. Site reconnaissance photographs are presented in Appendix A.

Based on visual observations of the surrounding area made during the Site reconnaissance and a review of historical aerial photographs and maps, the Site is located in an area primarily characterized by mixed commercial, residential, and industrial use.

According to the United States Geological Survey (USGS) Central Park Quadrangle 7.5-minute Series Topographic Maps, the Site sits at an elevation of approximately 5 feet above mean sea level (msl). The topography in the immediate area of the Site is generally flat. The approximate depth to groundwater is about 5 feet below grade surface (bgs). Groundwater is expected to flow to the southwest towards the Harlem River, which is located west of the Site, across Block 2316, Lot 35. The following table summarizes adjoining and surrounding property usage:

Direction	Adjoining Properties	Surrounding Properties
Northeast	Bruckner Avenue followed by commercial buildings	Multiple-story commercial and industrial buildings
Southwest	Block 2316, Lot 35 followed by Harlem River and railroad tracks	
Southeast	Lincoln Avenue followed by Glass Works Building and MFM Contracting Corp.	
Northwest	Third Avenue Bridge	

### 2.2 Current Site Use and Improvements

The Site is improved with a one-story, L-shaped warehouse building with a connected two-story office building encompassing approximately 83,064 square feet. The Site is divided into two sections with Third Avenue Transit Inc. occupying the eastern portion of the Site and Oz

Moving & Storage occupying the western portion. Third Avenue Transit Inc. utilizes the Site for storage of equipment & materials, school bus repairs, and as office space. Oz Moving & Storage utilizes the Site for the storage of equipment, materials and vehicles, and vehicle repair. The building is connected to public water and sewers and is heated via natural gas burners. Improvements at the Site are summarized in the following table:

<b>SITE IMPROVEMENTS</b>	
<b>Size of the Site</b>	133,700 square feet
<b>Buildings/Spaces/Structures</b>	Improved with a one, and two-story building with a paved vehicle parking lot.
<b>Unimproved Areas</b>	None
<b>Surface Water</b>	Surface water is not located on the Site. The nearest surface water body is the Harlem River located west of the Site, across Block 2316, Lot 35.
<b>Potable Water Source</b>	New York City
<b>Sanitary and Storm Sewer Utilities</b>	New York City
<b>Electrical Utilities</b>	Consolidated Edison Company of New York, Inc.
<b>Construction Completion Date</b>	1966
<b>General Construction Type</b>	Brick and concrete masonry
<b>Heating System Type</b>	Natural gas boilers
<b>Emergency Power</b>	None

### **2.3 Title Records**

Langan researched ownership records through the New York City Department of Finance, Office of the City Register, Automated City Register Information System (ACRIS) website at <http://a836-acris.nyc.gov/CP/>. ACRIS listed Gerosa Incorporated as the current owner of the Site. There was no additional deed information provided; however, two leases; one for New York Telephone Company on February 27 1997, and one for Verizon New York Inc. on August 9, 2004, were provided.

Based on the reasons specified below regarding site conditions and the potential for spills or releases of petroleum, solvents, or other hazardous substances related to former use, historical usage of the Site by the New York Telephone Company and Verizon New York constitutes a REC.

### **3.0 USER PROVIDED INFORMATION**

#### **3.1 User Questionnaire**

Per ASTM E1527-13, a buyer and owner questionnaire was provided to inquire about specialized information related to the Site. The buyer questionnaire indicated no knowledge of environmental conditions at the Site. A copy of the completed buyer questionnaire is provided in Appendix B. A completed owner questionnaire was not provided to Langan by the date of the release of this report.

#### **3.2 Previous Environmental Reports**

The following reports were reviewed as part of this Phase I ESA (included in Appendix C).

Tank Environmental Profile Analysis for 14 550-Gallon Tanks – 101 Lincoln Avenue, Bronx, New York; Gaservice Maintenance Corporation (Gaservice), September 5, 1991

Langan was not provided with a complete version of the Tank Environmental Profile (TEP) Analysis report. The TEP Analysis was performed for twelve 550-gallon diesel and two 550-gallon gasoline USTs located in the eastern perimeter of the Site along Lincoln Avenue (see Figure 2). The findings of the report are summarized below:

- The tanks were observed to be in fairly good condition with respect to overall corrosion;
- The soil resistivity surrounding the tanks was relatively low, and the moisture content and soil microbe count was fairly high, both of which would lead to an increase in corrosion and therefore a shorter tank life;
- Diesel fuel contamination was observed in all six soil samples collected around the tanks (concentrations of TPH ranging from 69 to 246 ppm). Lab tests show that diesel fuel contamination has been present for some time, and does not seem to be a recent or recurring problem.

Tank Seal Affidavit – 101 Lincoln Avenue, Bronx, New York; Gaservice Maintenance Corporation (Gaservice), December 24, 1991

The tank seal affidavit states that Gaservice permanently abandoned twelve 550-gallon diesel and two 550-gallon gasoline tanks on December 9, 1991. The tanks were reportedly purged of all product, de-fumed, and filled with concrete slurry. The tank fills, vents, and all openings

were sealed with concrete and four dispensers were removed. The affidavit reports that a soil boring analysis was also performed; however, the results of the analyses were not provided.

Tank Closure Affidavit – 101 Lincoln Avenue, Bronx, New York; Gaservice, March 26, 1992

The tank closure affidavit states that Gaservice permanently closed-in-place one 1,000-gallon motor oil tank and one 1,000-gallon waste oil tank on March 18, 1992. As part of the closure activities, both tanks were partially uncovered, cut open, vacuum-cleaned, and filled with concrete slurry. In addition, the tank fills, vents, and all openings were sealed with concrete. One soil sample was reportedly collected following closure activities; however, analytical results were not provided. Based on a hand sketch provided with the affidavit, both closed-in-place tanks are located in the north-central area of the Site, outside of the existing building (see Figure 2).

Phase I ESA for Verizon and Atlantic Express Bus Garage – 101 Lincoln Avenue, Bronx, New York; CA Rich Consultants, Inc. (CA RICH), October 2007

Langan was only provided with the text of the above referenced report. At the time of the 2007 Phase I ESA, the Site was divided into two sections with Verizon occupying the eastern portion of the Site and Atlantic Express Bus occupying the western portion. The Phase I identified the following RECs:

- REC-1: Three floor drains were found throughout the Atlantic Express Bus garage. One drain was opened and found to contain a soft bottom with a depth of approximately six inches.
- REC-2: A hydraulic lift was identified in the Verizon warehouse. In addition, two possible hydraulic lift covers were identified in close proximity to the hydraulic lift.
- REC-3: An oil/water separator and associated well covers were identified in the Verizon warehouse.
- HREC-1: Twelve 550-gallon diesel tanks and two 550-gallon gasoline tanks were abandoned in place in 1991 and 1992.
- HREC-2: The Site had been occupied by the New Jersey Rail Road Bronx Freight from 1908 to 1951 and was used for coal storage between 1891 and 1908.

## 4.0 RECORDS REVIEW

### 4.1 Environmental Records

A copy of regulatory database information was provided by EDR and is included in Appendix D. The EDR report is a listing of sites identified on select federal and state standard source environmental databases within the approximate search radius specified by ASTM Standard Practice for E1527-13. Langan reviewed each environmental database on a record-by-record basis to determine if certain sites identified in the report are suspected to represent a potential impact to the Site. Langan also reviewed "Orphan Sites" listed within the report. Orphan Sites are those sites that could not be mapped due to inadequate address information. Orphan Sites that were identified by Langan within the ASTM search radii, either during the site reconnaissance or by cross-referencing to mapped listings, are addressed in the discussion below. All distances to adjacent properties are measured from the perimeter of the Site.

The following table lists the number of sites by database within the prescribed search radius appearing in the EDR Report.

<b>Database Record Summary</b>			
<b>Database Reviewed (Date of government version)</b>	<b>Minimum Search Area</b>	<b>Site listed</b>	<b>Number of Sites Within Minimum Search Area</b>
<b>USEPA DATABASES</b>			
National Priorities List (NPL) (10/25/2013)	1 Mile Radius	No	0
Delisted NPL (10/25/2013)	1/2 Mile Radius	No	0
Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) and CERCLIS No Further Remediation Action Planned (NFRAP) (10/25/2013)	1/2 Mile Radius	No	0
Resource Conservation and Recovery Act (RCRA) Corrective Reports (CORRACTS) (3/11/2014)	1 Mile Radius	No	0
RCRA Treatment, Storage, and Disposal Facilities (TSDf) (3/11/2014)	1/2 Mile Radius	No	0
RCRA Generators (3/11/2014)	Site and Adjoining	Yes	1
Facility Index System/Facility Registry System (FINDS) Database (11/28/2013)	Site	Yes	1
Environmental Response Notification System (ERNS) (9/30/2013)	Site	No	0

<b>Database Record Summary</b>			
<b>Database Reviewed (Date of government version)</b>	<b>Minimum Search Area</b>	<b>Site listed</b>	<b>Number of Sites Within Minimum Search Area</b>
Engineering Controls (EC) Sites Lists (12/17/2013)	Site	No	0
Institutional Controls (IC) Sites Lists (12/17/2013)	Site	No	0
<b>NYSDEC DATABASES</b>			
Hazardous Waste Disposal Sites (SHWS) and Delisted SHWS (2/17/2014)	1 Mile Radius	No	3
Hazardous Substance Waste Disposal Site Inventory (HSWDS) (1/1/2003)	1/2 Mile Radius	No	0
Solid Waste or Landfill Facilities (SWF/LF) (12/12/2013)	1/2 Mile Radius	No	4
Leaking Tanks (LTANKS) (4/05/2013)	1/2 Mile Radius	No	48
SPILLS Information Database (NY SPILLS) (2/17/2014)	1/8 Mile Radius	Yes	34
EC Sites Lists (2/17/2014)	Site	No	0
IC Sites Lists (2/17/2014)	Site	No	0
Voluntary Cleanup Program (VCP) (2/17/2014)	1/2 Mile Radius	No	0
Brownfields (2/17/2014)	1/2 Mile Radius	No	3
Petroleum Bulk Storage Facilities (PBS) UST and Aboveground Storage Tanks (AST) Databases (12/30/2013)	Site and Adjoining	Yes	1
Chemical Bulk Storage (CBS) UST and AST Databases (12/30/2013)	Site and Adjoining	No	0
Major Oil Storage Facilities (MOSF) UST and AST Databases (12/30/2013)	Site and Adjoining	No	0
Registered and Historical Drycleaners (DRYCLEANERS) (1/21/2014)	1/4 Mile Radius (N/A)	No	0
NY E Designation (12/10/2014)	1/8 Mile Radius	Yes	7
<b>EDR (PROPRIETARY) DATABASES</b>			
EDR Former Manufactured Gas Plant (MGP) Sites (N/A)	1 Mile Radius (N/A)	No	1
EDR US Hist Auto Stat (N/A)	1/4 Mile Radius (N/A)	No	20
EDR US Hist Cleaners (N/A)	1/4 Mile Radius (N/A)	No	1

N/A Not Applicable; databases with a "Not Applicable" Minimum Search Radius are databases reviewed as part of the Phase I ESA but not required as per ASTM E1527-05.

A description of the reviewed databases is provided in the EDR Report (Appendix D). A summary of Site database listings and other sites identified within the prescribed search area is presented below:

#### **4.1.1 Federal Agency Database Findings**

The Site and/or sites within their respective minimum search distances as specified by ASTM E1527-13, were not listed in the following federal agency databases: NPL, delisted NPL, CERCLIS and CERCLIS NFRAP, CORRACTS, RCRA TSD, ERNS, EC Sites List, and IC Sites List.

The following summary describes the sites that were identified within the designated search radii:

##### **RCRA Generators**

The Site was listed in the RCRA-NonGen database under the name Felix Industries due to that site's status as a SQG in 1998. The RCRA-SQG listing indicates that more than 100 and less than 1,000 kg of hazardous waste is generated during any calendar year month and accumulates less than 6,000 kg of hazardous waste at any time; or generates 100 kg or less of hazardous waste during any calendar month, and accumulates more than 1,000 kg of hazardous waste at any time. Felix Industries formerly occupied the property located adjacent and to the east of the Site (across Lincoln Avenue); therefore, the RCRA listing may have been inaccurately mapped. Based on nature of the listing, the identified RCRA site is not considered a REC.

##### **Facility Index System/Facility Registry System (FINDS)**

The Site was listed in the FINDS database. The FINDS listing is related to US EPA TRIS [Environmental Protection Agency - Toxic Release Inventory System], which identifies facilities that release toxic chemicals to the air, water and/or land or that are transported off-site in reportable quantities. There are no reported violations for this listing. Based on nature of the listing, the FINDS listing is not considered a REC.

#### **4.1.2 State Agency Database Findings**

The Site and surrounding properties within the respective minimum search distances as specified by ASTM E1527-05 were not listed in the following state agency databases: HSWDS, EC, IC, VCP, CBS, MOSF, and DRYCLEANERS.

## **SHWS**

The SHWS database maintains information regarding the investigation and cleanup of suspected hazardous waste sites. The Site was not identified in the SHWS database; however, one SHWS sites were identified within 1/8-mile of the Site. Based on distance from the Site and nature of the listing, the identified SHWS site is not considered a REC.

## **SWF/LF Database**

The SWF/LF database is a comprehensive listing of State permitted/recorded solid waste facilities. The Site was not listed in the SWF/LF database; however, four SWF/LF listings were identified within ½-mile of the Site. Two of the four listings (Waste Management of NY (WMNY) LLC Harlem River Yard and Petro Recycling LLC) are located adjacent and to the east of the Site across Lincoln Avenue. WMNY LLC Harlem River Yard (located at 98 Lincoln Avenue) is listed as an active transfer station of municipal solid waste and construction & demolition debris. Petro Recycling LLC (located at 290 East 132 Street) is listed as an active processing center for soil, concrete, rock, gravel, stone, and sand. The two remaining SWF/LF sites are located more than 1,000 feet from the Site. Based on the nature of the listing, the four identified SWF/LF sites are not considered RECs.

## **Leaking Underground Storage Tanks Database**

The LTANKS database contains an inventory of reported leaking storage tank incidents, including leaking USTs and ASTs. The Site was not listed in the database; however, 48 LTANK incidents were identified within a 1/2-mile radius of the Site. The listed incidents have been primarily caused by tank test failures, tank failures, and tank overfills. Forty-two of the 48 LTANK incidents have been granted closed status by the NYSDEC. Based on the nature of the six open listings and their distance from Site (more than 1,300 feet and/or located across the Harlem River), the listings are not considered RECs.

## **Spills Database**

The NY Spills database is an inventory of sites where spills have been identified and reported to the NYSDEC. The Site is listed in this database due to a reported puddle of raw sewage that was observed along Lincoln Avenue adjacent to the Site on August 3, 2003. No spill response was required by NYSDEC and the spill was closed on August 4, 2003. The EDR report identified 34 spill cases within 1/8 mile of the Site, of which 33 incidents have been granted closed status by the NYSDEC. Nineteen of the 33 closed spill incidents are located within 250 feet from the Site. Although it is unlikely that the Site's groundwater has been adversely impacted from a

specific, single source, it is possible that these sources could have jointly contributed to the degradation to area groundwater quality. The record for the open spill is described below:

**Site Name:** Pole 18025

**Site Address:** East 132<sup>nd</sup> Street & Lincoln Avenue

**Location:** East adjacent (up-gradient) of the Site.

**Status:** Open

**Description:** Spill No. 1210172 was reported on November 12, 2012 due to a 2-gallon spill of dielectric fluid caused by a storm event. No further information was provided in the EDR report. Based on the quantity of the spill, this listing is not considered a REC.

### **Brownfields Database**

The Brownfields database is a listing of State and tribal Brownfields sites registered with the NYSDEC. The minimum search radius for Brownfields facilities includes the Site and sites within one half-mile of the Site. The Site was not listed in the database; however, three sites were identified within the search radius. Based on the nature of the listings and their distance from Site (more than 1,170 feet), two of the three listings are not considered RECs. The record for the remaining Brownfields listing is described below.

**Site Name:** 2477 Third Avenue Property

**Site Address:** 2477 Third Avenue

**Location:** 745 feet northeast (up-gradient) of the Site.

**Classification:** Active

**Description:** Based on investigations conducted to date, the primary contaminants of concern in soil and groundwater are petroleum related compounds. No information was provided with respect to the off-site migration of contaminants; however, the EDR report indicates that the potential exists for off-site migration of site-related contaminants in soil vapor. This Brownfield site may have adversely impacted groundwater, and/or soil vapor at the Site; therefore, constitute a REC.

### **Petroleum Bulk Storage Facilities UST and AST Databases**

The PBS database is a listing of USTs and ASTs registered with the NYSDEC. The minimum search radius for PBS facilities includes the Site and adjoining properties. The Site was listed in the PBS database for twelve closed-in-place 550-gallon diesel USTs, two 550-gallon closed-in-place gasoline USTs, and one closed and removed 275-gallon AST (unspecified contents). The adjoining property to the south (98 Lincoln Avenue) is listed in the PBS database for five active ASTs; including, two 275-gallon waste oil tanks, two 330-gallon hydraulic oil tanks, and one 180-

gallon diesel tanks. Potential leaks or spills of petroleum may have adversely impacted soil, groundwater, and/or soil vapor at the Site; therefore, the former onsite storage of petroleum constitutes a REC.

### **NY E Designation Sites**

The Site has an "E" designation for air, noise, and hazardous materials as a result of the Port Morris/Bruckner Boulevard Rezoning (CEQR # 05DCP005X). In addition, seven properties within the 1/8 mile search radius were listed in the database. The "E" designation itself is not considered a REC; however, any development of the properties will be subject to environmental review by the New York City Office of Environmental Remediation (NYC OER) and sub-surface investigation will be required and approved by the NYC OER before building permits are issued and a remedial action work plan must be approved and implemented, to the satisfaction of the NYC OER, prior to obtaining a certificate of occupancy..

#### **4.1.3 Other Database Findings**

The MGP Sites database is a proprietary database that includes records of manufactured coal gas plants compiled by EDR. The Site was not listed in the MGP database. One MGP site was identified within a one-mile radius of the Site; however, the identified site is located more than 4,500 feet cross-gradient from the Site and is not considered a REC.

### **Historical Auto Stations**

The Historical Auto Stations database is a proprietary database that includes records of historical auto stations compiled by EDR. The Site was not listed in the historical auto stations database. Twenty historical auto stations sites were identified within the minimum search criteria of 1/4 mile of the Site, three of which were identified within 300 feet of the Site. Potential petroleum and/or solvent releases associated with the three Historical Auto Stations listings (listed below and shown on Figure 2) may have adversely impacted soil, groundwater, and/or soil vapor at the Site and are considered a REC:

- J & Santana Auto Repair (1999-2003, 2005, 2009-2012) – 131 Lincoln Avenue;
- New Superior Car Service (2011) – 133 Lincoln Avenue; and
- SY Complete Auto Repair Corp (2010-2012) – 258 East 134<sup>th</sup> Street.

## Historical Cleaners

The Historical Cleaners database is a proprietary database that includes records of historical cleaners compiled by EDR. The Site was not listed in the historical cleaners database. One cleaner was identified within the minimum search criteria of ¼ mile from the Site. Based on the nature of the listing (no reported violations) and its distance from the Site (879 feet), the presence of the historical cleaner is not considered a REC.

### 4.1.4 Local Regulatory Agency Findings

#### FOIA Requests

FOIA requests were submitted to the following federal, state, and local agencies via written correspondence:

- New York City Department of Environmental Protection (NYCDEP);
- New York City Department of Health (NYCDOH);
- New York City Fire Department (FDNY);
- New York State Department of Health (NYSDOH);
- New York State Department of Environmental Conservation (NYSDEC); and
- USEPA, Region 2.

FOIA requests were sent on April 14, 2014. The following table summarizes acknowledgement of receipts and responses.

Agency	Acknowledgement of Receipt Date	Response
NYCDOH	Not received	As of the date of this report, responses have not been received.
NYCDEP	Not received	As of the date of this report, responses have not been received.
FDNY	Not received	As of the date of this report, responses have not been received.
NYSDOH	Not received	As of the date of this report, responses have not been received.
NYSDEC	Not received	As of the date of this report, responses have not been received.
USEPA Region 2	April 14, 2014	As of the date of this report, responses have not been received.

Should any future responses alter the conclusions provided within this report, we will issue modified conclusions as an addendum to this report. Copies of the FOIA requests are included in Appendix E.

### **New York City Department of Buildings (NYCDOB)**

Langan conducted a records search through the NYCDOB online query system on April 16, 2014. The Site has a Department of Finance Building classification of G1-Garage/Gas Station. According to NYCDOB, a full stop work order was issued for the Site on May 13, 2005 for category code, "Construction – Contrary/Beyond Approved Plans/Permits." Additional actions reported for the Site included building notices, electric sign applications, and four dismissed DOB violations. Certificate of Occupancy documents were not available for the Site. A copy of the NYCDOB findings is provided in Appendix G.

### **Zoning Department**

According to the New York City Planning Commission Zoning Map 6a, the Site is located in a M1-3/R8 mixed-use district, typically characterized by moderate commercial and residential use. The review of the zoning map did not reveal RECs associated with the Site; however, the Site is listed with a restrictive "e" designation. A copy of the zoning map is provided in Appendix H.

## **4.2 Physical Setting Sources**

### **4.2.1 Topography**

According to the United States Geological Survey (USGS) Central Park Quadrangle 7.5-minute Series Topographic Maps, the Site sits at an elevation of approximately 5 feet above mean sea level (msl). The topography in the immediate area of the Site is generally flat. The approximate depth to groundwater is about 5 feet below grade surface (bgs). Groundwater at the Site is expected to flow to the southwest towards the Harlem River, which is located adjacent and to the west of the Site.

### **4.2.2 Geology**

The Site is located in the Bronx, which is located near the southern end of the Manhattan Prong. The Manhattan Prong is one of two southwestward extensions of the New England Upland physiographic province of the Northern Appalachians. The underlying bedrock in this area generally consists of white calcite-dolomite marble (Inwood Marble) interlayered with

Fordham Gneiss. Bedrock outcrops were not observed at the Site. Based on USGS reports, bedrock beneath the site is presumed to be at a depth of approximately 50 feet bgs.

### 4.2.3 Hydrology

Groundwater flow is typically topographically influenced, as shallow groundwater tends to originate in areas of topographic highs and flows toward areas of topographic lows, such as rivers, stream valleys, ponds, and wetlands. A broader, interconnected hydrogeologic network often governs groundwater flow at depth or in the bedrock aquifer. Groundwater depth and flow direction are also subject to hydrogeologic and anthropogenic variables such as precipitation, evaporation, extent of vegetation cover, and coverage by impervious surfaces. Other factors influencing groundwater include depth to bedrock, the presence of artificial fill, and variability in local geology and groundwater sources or sinks.

The approximate depth to groundwater is estimated at 5 feet bgs. Groundwater at the Site is expected to flow to the southwest towards the Harlem River, which is located west adjacent to the Site. Potable water is provided to the Site by the City of New York and is derived from surface impoundments in the Croton, Catskill, and Delaware watersheds.

### 4.3 Historical Use Information

Langan reviewed available historic resources (including aerial photographs, Sanborn and topographic maps, and city directories) dated 1891 to 2011. Findings of the reviews are presented below.

#### 4.3.1 Aerial Photographs

Langan reviewed aerial photographs of the Site and surrounding areas for the years 1924, 1941, 1944, 1954, 1966, 1975, 1984, 1994, 1995, 2006, 2009, and 2011. Copies of aerial photographs are included in Appendix J. A summary of the aerial photograph review is presented in the following table.

AERIAL PHOTOGRAPH SUMMARY	
YEAR	COMMENTS
1924	The Site appears with a round structure (railroad turntable) occupying the western half of the Site. Freight cars are observed to be occupying most of the remaining areas of the Site. The areas surrounding the Site are densely developed with a mix of commercial and residential structures. A bridge is located immediately northwest of the Site.
1941, 1944, 1954	The Site and surrounding area appears generally unchanged from the 1924 photograph.

AERIAL PHOTOGRAPH SUMMARY	
YEAR	COMMENTS
1966	The Site does not contain any structures. The areas surrounding the Site appear similar to 1954.
1975	The Site appears with a structure that resembles the size and configuration of the present-day structure. The areas surrounding the Site appear similar to 1966.
1984, 1994, 1995, 2006, 2009, 2011	The Site and surrounding area appears generally unchanged from the 1975 photograph.

Langan’s aerial photograph review revealed that the Site was occupied by a large railroad turntable from at least 1924 through 1954. In the 1966 aerial photograph, the Site does not contain any structures and then in 1975, the Site contains a structure that resembles the size and configuration of the present-day structure. The Site and surrounding areas have remained relatively unchanged since 1975. The Site’s former use as a railroad terminal is considered a REC.

#### 4.3.2 Sanborn Fire Insurance Maps

Langan reviewed Sanborn Maps for the years 1981, 1908, 1935, 1944, 1946, 1947, 1951, 1968, 1977, 1978, 1980, 1981, 1986, 1989, 1991-1996, 1998, and 2001-2007. Sanborn Maps constitute a database of prior site uses of real property for many cities and towns in the United States. Copies of the maps are provided in Appendix K. A summary of the Sanborn Maps is presented on the following table.

SANBORN MAP SUMMARY	
YEAR	COMMENTS
1981	<p><b>Site:</b> The Site is identified as containing building materials (Bell &amp; Son), sand, North and East River Steamboat Co., coal yard, livery stable, and Ice Co’s Yard. These businesses line the perimeter of the Site along Lincoln Avenue and Southern (present-day Bruckner Boulevard).</p> <p><b>Surrounding Area:</b>            To the north, across Southern, is a cabinet factory, moulding mill, railway car and stables, stone yard, and Morrisania and Fordham. To the southeast, across Lincoln Avenue, is the New York, New Haven, and Hartford Rail Road Co, Freight Depot, and a manufacturing establishment with stores below. To the northeast is a piano factory and New York woodworking. The Harlem Bridge is located northwest of Site and the Harlem River lines the southwestern Site boundary.</p>
1908	<p><b>Site:</b> The Site is identified as Central Rail Road of New Jersey, Bronx Freight Terminal. The railroad turntable remains at the Site and a float is now identified near the southwestern portion of the Site along the Harlem River.</p> <p><b>Surrounding Area:</b> To the north, across East 133<sup>rd</sup> Street (previously Southern), is the Union Railway Co. store yard, auto building, a hotel, contractor office, and a mixed use store/dwelling building. The Third Avenue Bridge is located to the northwest.</p>

<b>SANBORN MAP SUMMARY</b>	
<b>YEAR</b>	<b>COMMENTS</b>
1935	<p><b>Site:</b> The Site appears similar to 1908; however, a coal shed and locomotive house are depicted.</p> <p><b>Surrounding Area:</b> The areas surrounding the Site are primarily commercial businesses. Most notable of these are the 3<sup>rd</sup> Avenue Rail Road System Freight Yard, which contains a 275-gallon gasoline tank, and an auto house containing a 275-gallon buried gasoline tank. These tanks are located north/northeast of the Site, across East 133<sup>rd</sup> Street (present-day Bruckner Boulevard). Following these properties to the northeast exists a printing room and a private garage with a gas tank.</p>
1944	The Site and surrounding area appear similar to 1935 and have undergone relatively little change; however, the East 133 <sup>rd</sup> Street is now identified as Bruckner Boulevard.
1946	The Site and surrounding area appear similar to 1944; however, the gasoline tank identified at the former auto house (now identified as a private garage) is no longer depicted.
1947	<p><b>Site:</b> The Site appears similar to 1946; however, the coal shed is no longer depicted.</p> <p><b>Surrounding Area:</b> The areas surrounding the Site also appear similar; however, the gasoline tank identified at the 3<sup>rd</sup> Avenue Rail Road Freight Yard is not depicted and in its place is oil storage.</p>
1951	<p><b>Site:</b> The Site remains unchanged from the 1947 map.</p> <p><b>Surrounding Area:</b> The areas surrounding the Site appear similar to 1947; however, the private garage located to the northeast of the Site appears to have extended onto the property formerly identified as the 3<sup>rd</sup> Avenue Rail Road Freight Yard, and a gasoline tank is now depicted along the southern edge of the property.</p>
1968	<p><b>Site:</b> The Site is identified as Gerosa Haulage Corp and resembles the size and configuration of the present-day building. The Site contains a storage yard, crane repair, paint shop, crane paint shop, blacksmith shop, garage repair shop, and an office.</p> <p><b>Surrounding Area:</b> The areas surrounding the Site appear similar to 1951; however, an auto repair shop is identified northeast of the Site on East 134<sup>th</sup> Street and Lincoln Avenue.</p>
1977	The Site and surrounding area appears similar to 1968 and have undergone relatively little change; however, a small warehouse is shown in the southeast portion of the Site. In addition, the private garage located north of the Site, across Bruckner Boulevard, now longer shows a gasoline tank.
1978, 1980, 1981, 1984	The Site and surrounding area appears similar to 1977 and have undergone relatively little change; however the 1984 map shows a heavy equipment storage yard located south east of the Site, across Lincoln Avenue.
1986, 1989	The Site and surrounding area appear similar to 1984 and have undergone relatively little change; however, the auto repair shop located at East 134 <sup>th</sup> and Lincoln Avenue is no longer depicted on the 1989 map.

<b>SANBORN MAP SUMMARY</b>	
<b>YEAR</b>	<b>COMMENTS</b>
1991	The Site and surrounding area appear similar to 1989 and have undergone relatively little change; however, an auto repair shop is now depicted near the intersection of East 134 <sup>th</sup> and Lincoln Avenue.
1992, 1993, 1994, 1995	The Site and surrounding area appear similar to 1991 and have undergone relatively little change; however, the private garage located north of the Site, across Bruckner Boulevard, is now depicted as an auto repair shop on the 1995 map.
1996, 1998, 2001, - 2007)	The Site and surrounding area appear similar to 1995 and have undergone relatively little change.

Langan’s Sanborn Map review revealed that the Site was developed sometime before 1968. From 1908 to 1951. The Site is occupied by the New Jersey Central Rail Bronx Freight Terminal. From 1968 to 2007, the Site is identified as Gerosa Haulage Corporation (with uses including crane repair, paint shop, blacksmith shop, and garage repair shop) and contains a building that resembles the size and configuration of the present-day building. Historical usage of the Site is a REC. Inadvertent releases of solvents, petroleum products, metals, polychlorinated biphenyls (PCB) and/or other chemicals used during former and current operations may have adversely impacted soil, groundwater, building components and/or soil vapor at the Site.

Properties surrounding the Site have historically been residential dwellings and commercial buildings with auto repairs, office space, lofts, parking garages, manufacturing facilities, freight depots, a piano factory, printing, and woodworking. RECs associated with historical uses of adjoining and surrounding properties are identified on Figure 2 and include the following:

- An auto building (1908 - 1947) located at 2414 Third Avenue;
- An auto house (1935 – 1944) located at 3 Bruckner Boulevard;
- A railroad freight yard (1935 – 1944) located at 3-5 Bruckner Boulevard;
- A private garage (1935 – 1944) and a printing facility (1935 – 1947) located at 3-5 Bruckner Boulevard;
- A cabinet factory (1891) located at 121 Lincoln Avenue;
- An auto repair shop (1968 – 1989) located at 133-135 Lincoln Avenue;
- An auto repair shop (1968 – present) located at 129-131 Lincoln Avenue;

- A manufacturing establishment (1981), coal body service (1949), and an iron works shop (1940 – 1949) located at 82-98 Lincoln Avenue;
- A manufacturing facility (1908-1946) located at 18-22 Bruckner Avenue; and
- A freight depot (1891-1946) and a heavy equipment storage yard (1984-2007) located at 290 East 132<sup>nd</sup> Street.

#### **4.3.3 Historical USGS Topographic Quadrangles**

Langan reviewed historical USGS Topographic Quadrangles obtained from EDR for information regarding past uses of the Site. Quadrangle maps were available for the Site for the years 1897, 1947, 1956, 1966, 1979, and 1995. Based on a review of the historic topographic maps, the Site and surrounding areas were developed with an urban grid by 1897. Review of the historical topographic quadrangles did not reveal RECs associated with the Site. Copies of the topographic maps are provided in Appendix L.

#### **4.3.4 City Directories**

The City Directory Abstract, obtained from EDR, is a review of available business directories, including city, cross-reference, and telephone directories, at approximately five-year intervals for the years spanning 1927 through 2013. Copies of the City Directory Abstracts are provided in Appendix M. The address is not listed for the Site from 1927 to 1961. In 1965, the Site is listed with two names, McKinney Carew L and Masia Philip. From 1971 to 2005, the Site is listed under the Gerosa name. The areas surrounding the Site appears to be used for residential and commercial purposes. Most notably, the Harlem Coal Body Service Company (1949) and Peerless Iron Works (1940 and 1949) were located at 88 Lincoln Avenue (adjacent and to the east of the Site across Lincoln Avenue). Review of information available in the City Directory revealed RECs associated with the surrounding property use.

#### **4.3.5 Environmental Lien Search**

Langan contracted EDR to conduct an Environmental Lien search for the Site. The results of the search, which included a compilation of available data and verification of the findings with the appropriate regulatory authorities, revealed that there are no Environmental Liens or other Activity and Use Limitations (AUL) associated with the Site. A copy of the Environmental Lien Search is provided in Appendix N.

## **5.0 SITE RECONNAISSANCE**

### **5.1 Methodology and Limiting Conditions**

The Site reconnaissance was conducted in a systematic manner focusing on the spatial extent of the Site and then progressing to the adjacent and surrounding properties. The assessment of the adjacent and surrounding properties was limited to identifying, if possible, any indications of past or current use that may involve the use, storage, disposal, or generation of hazardous substances or petroleum products; noting the general type of current use; the general topography of the surrounding area; and providing a general description of adjoining or adjacent structures.

#### **5.1.1 Date and Time of Inspections**

The site reconnaissance was completed on April 17, 2014 at 10:00 AM by Nicole Rice, PE, of Langan. Mrs. Rice was accompanied by John Reinersten on behalf of the owner during the Site walk. The weather at the time of the inspection was sunny and approximately 45° F.

#### **5.1.2 General Site Setting and Reconnaissance Observations**

The Site is improved with a one-story, L-shaped warehouse building with a connected two-story office building. The building is constructed of brick and mortar and the parking lot is a mix of concrete and asphalt. The Site is divided by a chain-link fence that separates Oz Moving & Storage on the west and Third Avenue Transit Inc. on the east. Driveways along Lincoln Avenue provide access to both businesses. The building is connected to public water and sewers and is heated via natural gas burners.

The Oz Moving & Storage property contains three two-story garage bays and four raised warehouse garage bays. The parking lot contains several parked trucks and vehicles throughout. An apparent fill port was identified in the sidewalk along the northwestern edge of the Site. Based on the potential presence of historic tanks and lack of any documentation of tank closure, the fill port and potential petroleum tank(s) are a REC.

The interior of the Oz Moving & Storage portion of the Site is constructed of concrete floors, painted concrete block walls, and a raised metal ceiling. Oz Moving & Storage utilizes the building for the storage of equipment, materials, and vehicles, and vehicle repair. As such, there are typical vehicle maintenance and repair materials and equipment used and stored throughout. Equipment included several portable electric vehicle jacks, three air compressors,

two pressure washers, and welding equipment. One 275-gallon hydraulic oil AST was identified in the repair area in the central portion of the building (see Figure 2). No signs of any leaks or spills were noted at the time of the site reconnaissance. Discoloration and staining was observed in each of the garage bays; fresh staining was covered with granular oil absorbent material. The observed discoloration and staining of the floors is considered a REC.

The Third Avenue Transit Inc. property contains three raised warehouse garage bays and a two-story office building on the northeastern portion of the Site. The parking lot contains approximately 20 parked school buses, two storm drains, a security booth and miscellaneous equipment. The interior of the Third Ave Transit Inc. property is constructed of concrete floors, painted and unpainted concrete blocks, and a raised metal ceiling. Vinyl floor tiles were identified on the floor of the second floor mechanics lunch room and first floor dispatch office. Third Avenue Transit Inc. utilizes the building for the storage of equipment, materials, and vehicles, and school bus repair. As such, there are typical vehicle maintenance and repair materials and equipment used and stored throughout. Equipment included several portables electric vehicle jacks, a forklift, battery chargers, and an air compressor. A metal grated channel for the collection of runoff water is located in the middle of the warehouse and runs the length of the parking area in the warehouse. The grated runoff channel is connected to an underground oil/water separator tank located near the northwestern portion of the building. Two manhole covers labeled as "monitoring well" were located within approximately 5 feet of the oil/water separator. Inside the manhole covers were two pipes likely associated with leak detection. An active hydraulic lift was located along the north wall of the building. In addition, two orange covers were identified west of the hydraulic lift, which may be non-activated hydraulic lifts. A boiler room is located near the southeast portion of the building and contains two hot water tanks, three floor drains, and a sump pit. One 275-gallon hydraulic oil AST and one 275-gallon diesel exhaust fluid AST were identified within the building (see Figure 2). No signs of any leaks or spills were noted at the time of the site reconnaissance. Discoloration and staining was observed throughout the building interior; fresh staining was covered with granular oil absorbent material at the time of the inspection.

The interior of the office space consists of painted walls, vinyl floor tiles, carpeting, and drop in ceiling tiles. Typical office equipment, materials, and supplies were identified throughout the office.

### **Pits, Ponds, Lagoons**

Pits, ponds, and/or lagoons were not observed.

## **Pools of Liquid**

With the exception of several small puddles of accumulated rainwater, no pools of liquid were observed.

## **Storm Drains, Wells, and Cisterns**

The parking lot for the Oz Moving & Storage property contained one storm drain near the Harlem River along the western Site boundary and the parking lot for the Third Avenue Transit Inc. property contains two storm drains. No evidence of water wells or cisterns was observed. Four floor drains were identified in the Oz Moving & Storage garage bays and two floor drains, in addition to the metal grated runoff channel, were identified in the northern portion of the Third Avenue Transit Inc. office/storage area.

## **Polychlorinated Biphenyl (PCB) Transformers and Suspect Equipment**

Except for fluorescent lights, transformers or suspect PCB-containing equipment were not observed. Fluorescent light ballasts manufactured prior to 1979 may contain PCBs.

## **Storage Containers and Drums**

Within the Oz Moving & Storage property, the following storage containers and drums were identified:

- Three 55-gallon drums of windshield washer fluid;
- Two 55-gallon drums of motor oil;
- One 5-gallon container of hydraulic oil;
- Three open buckets of mixed oil;
- Three 25-gallon containers of gasoline;
- One 5-gallon bucket of lacquer thinner;
- Six 5-gallon buckets of brake fluid
- Three 5-gallon buckets of lubricant;
- Two 55-gallon drums of diesel exhaust fluid;
- Six 55-gallon drums of transmission fluid;
- Two empty 55-gallon drums, three 55-gallon drums of windshield washer fluid, one 55-gallon drum of apparent waste oil (located outside, southwest of the building);

- Numerous small quantities of petroleum and solvent based products.

Within the Third Avenue Transit Inc. property, the following storage containers and drums were identified:

- Seventeen 55-gallon drums of windshield wiper fluid;
- Three 55-gallon drums of antifreeze;
- Three 55-gallon drums of motor oil;
- Two 10-gallon containers of gasoline;
- Two 25-gallon containers of gasoline; and
- One 55-gallon drum of speedy-dry.

### **Air Emissions or Wastewater Discharges**

Evidence of air discharges was not observed. Wastewater discharges through the oil/water separator to the public sewer are presumed.

### **Sumps**

One sump located adjacent to the boiler in the building was identified.

### **USTs or ASTs**

Two approximately 275-gallon hydraulic oil ASTs and one 275-gallon diesel exhaust fluid AST were identified. These tanks are not listed on the NYSDEC PBS registration for the Site. In addition, an apparent former fill port was identified in the vicinity of the former USTs previously closed-in-place along the eastern edge of the property. An apparent fill port was also identified in the sidewalk along the northwestern edge of the Site. Potential leaks or spills of thr USTs may have adversely impacted soil, groundwater, and/or soil vapor.

### **Monitoring Wells or Remedial Activities**

With the exception of the two monitoring wells used for leak detection for the on-site oil/water separator, monitoring wells were not observed at the Site.

### **Stained or Discolored Soils**

With the exception of a small area located along the southwestern edge of the Oz Moving & Storage property, the Site is covered entirely by an impermeable surface. Soil staining and apparent petroleum odors identified in this area constitutes a REC. According to the NYC Department of Finance Tax Map, an approximate 50-foot wide sliver of land (Block 2316, Lot 35) exists between the Site and the Harlem River; therefore, the observed soil staining may be located outside the Site property line.

### **Leachate or Seeps**

Leachate or seeps were not observed.

### **Adjoining and Surrounding Property Uses**

The adjoining properties include: railroad tracks and the Harlem River to the south; Lincoln Avenue followed by a three-story commercial buildings and an active processing center for soil, concrete, rock, gravel, stone, and sand to the east; Bruckner avenue following by one- to three-story mixed used buildings to the north; and the Third Avenue Bridge and the Harlem River to the west.

### **Site Reconnaissance Conclusions**

Based on observations during the site reconnaissance, the following RECs were identified:

- An apparent fill port located in the sidewalk along the northwestern edge of the Site.
- Soil staining and apparent petroleum odors along the southwestern edge of the Site.
- Vehicle repair equipment, extensive product storage, discolored floors, and supplies and work areas are apparent throughout the building.

## **6.0 INTERVIEWS**

### **6.1 Site Owner**

Mrs. Rice interviewed Mr. Reinersten, representing the site owner, during the Site reconnaissance on April 18, 2014. Mr. Reinersten was knowledgeable of the former uses of the Site and historical UST closure activities and was unaware of any spills or releases that may have occurred at the Site, or any other environmental concerns at the Site.

### **6.2 Site Occupants**

Site Occupants were not interviewed as part of this Phase I ESA

### **6.3 Owners/Tenants of Adjacent Properties**

Owners/tenants of adjacent properties were not interviewed as part of this Phase I ESA.

## **7.0 ADDITIONAL SERVICES**

### **7.1 Radon**

Radon is a colorless, odorless radioactive gas that results from the natural breakdown of uranium minerals in soil, rock, and water, which subsequently enters the atmosphere. It can concentrate in buildings, entering through cracks and other penetrations of a building foundation. Some areas are more likely to have elevated concentrations of radon than others, reflecting subsurface lithologic conditions.

The USEPA's "Map of Radon Zones for New York State" indicates that Bronx is located in a Zone 3 radon risk area, which is associated with a low radon risk potential. Zone 3 risk areas are those where the predicted average indoor screening level is less than 2.0 picocuries per liter (pCi/L). According to the New York State Department of Health (NYSDOH), a total of 31 radon tests have been conducted in Bronx County with results indicating that 4% of living areas and 58% of basements have radon concentrations above 4 pCi/L. Based on this data, there is a potential for radon to accumulate in buildings; radon represents an environmental concern. A USEPA radon map is provided as Appendix O.

### **7.2 Asbestos-Containing Material, Lead-Based Paint, and PCBs**

A formal survey to identify asbestos containing materials (ACM), lead-based paint (LBP), and PCBs in building materials was not conducted as part of this Phase I ESA. Based on the age of the building, ACM, LBP, and PCB-containing materials are likely present in the Site building materials. Chipping paint was observed on some of the walls, and suspect PCB-containing materials (i.e., window caulking and fluorescent light ballasts) were observed throughout the building.

## **8.0 DEVIATIONS AND DATA GAPS**

### **8.1 Deviations**

Langan has performed a Phase I ESA of the Site utilizing a standard of good commercial and customary practice that is consistent with the ASTM E1527-13 and the 40 Code of Federal Regulations (CFR) Part 312 Standards and Practices for AAI. Significant deviations were not made to the above referenced standards.

### **8.2 Data Gaps**

In order to address data gaps, additional sources of information may be consulted. According to AAI, Section 312.20 (g), "to the extent there are data gaps (as defined in section 312.10) in the information developed...that affect the ability of persons (including the environmental professional) conducting the all appropriate inquiries to identify conditions indicative of releases or threatened releases...such persons should identify such data gaps, identify the sources of information consulted to address such data gaps, and comment upon the significance of such data gaps". According to ASTM E 1527-13, Section 8.3.2.3, "historical research is complete when either: (1) the objectives in 8.3.1 through 8.3.2.2 are achieved; or (2) data failure is encountered. Data failure occurs when all standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met. If data failure is encountered, the report shall document the failure and, if any of the standard historical sources were excluded, give the reasons for the exclusion."

This Phase I ESA was completed without significant data gaps.

## **9.0 FINDINGS AND OPINIONS**

This Phase I ESA was conducted in accordance with the ASTM Practice E1527-13 (Standard Practice for ESA: Phase I ESA Process) and the USEPA AAI Rule. The objective of this Phase I ESA was to identify the presence or likely presence, use, or release on the Site of hazardous substances or petroleum products as defined in ASTM E1527-13 as a REC.

The Phase I ESA identified the following RECs for the Site:

### REC 1 – Current and Historical Site Use

The following current and historical property uses are considered a REC:

- Coal Storage from approximately 1891 to 1908;
- New Jersey Rail Road Bronx Freight terminal from approximately 1908 through the 1950s; and
- Crane repair, paint shop, blacksmith shop, bus depot, and vehicle repair shop from approximately 1968 to present.

The Site is presently divided into two sections with Third Avenue Transit Inc. occupying the eastern portion of the Site and Oz Moving & Storage occupying the western portion. Third Avenue Transit Inc. utilizes the Site for storage of equipment & materials, school bus repairs, and as office space. There is an oil-water separator with an apparent leak detection system in the middle of the Third Avenue Transit warehouse building. The condition of the oil-water separator system is unknown. Oz Moving & Storage utilizes the Site for the storage of equipment, materials and vehicles, and vehicle repair. Vehicle repair equipment and discolored and stained floors are apparent throughout the building. Inadvertent and/or incidental releases of solvents, petroleum products, PCBs and/or other chemicals used during operations at these facilities may have adversely impacted soil, soil vapor and groundwater.

### REC 2 – On-Site Closed-In-Place Underground Storage Tanks

Twelve 550-gallon diesel USTs, two 550-gallon gasoline USTs, one 1,000-gallon motor oil UST, and one 1,000-gallon waste oil UST were closed-in-place between 1991 and 1992. Inadvertent releases from these tanks while they were active may have impacted soil, soil vapor, and groundwater. Based on the historic usage and the presumed age of the tanks (approximately 44 years), the closed-in-place USTs are a REC.

### REC 3 – Potential Historic Petroleum Storage

An apparent fill port was identified in the sidewalk along the northwestern edge of the Site. There are no records of a petroleum bulk storage tank near the apparent fill port. Based on the potential presence of tanks and lack of any closure documentation, the fill port and potential petroleum tank(s) are a REC.

### REC 4 – Soil Staining

Petroleum-like staining and odors were identified along the southwestern corner of the building during the site reconnaissance. A petroleum release may have impacted soil, soil vapor and groundwater and is considered a REC. According to the NYC Department of Finance Tax Map, an approximate 50-foot wide sliver of land (Block 2316, Lot 35) exists between the Site and the Harlem River; therefore, the observed soil staining may be located outside the Site property line.

### REC 5 – Historical Use of Surrounding Properties

Historical use of properties surrounding the Site include commercial buildings with office space, lofts, auto repairs (1908 – present), parking garages (1951 – 1968), manufacturing facilities (1891 – 1946), freight depots (1891 – 1947), a piano factory (1891), printing (1935 – 1947), and woodworking (1891). Additionally, an active NYSDEC Brownfields Site was identified approximately 745 feet northeast (up-gradient) of the Site. Based on investigations conducted to date, the primary contaminants of concern in soil and groundwater are petroleum related compounds. No information was provided with respect to the off-site migration of contaminants; however, the EDR report indicates that the potential exists for off-site migration of site-related contaminants in soil vapor. Potential petroleum and solvent releases associated with the historical surrounding property uses may have adversely impacted soil, groundwater, and/or soil vapor at the Site and is, therefore, considered a REC.

Historic RECs (HRECs), Controlled RECs (CRECs) or de minimis conditions were not identified.

### **Non-ASTM Matters**

#### Asbestos, Lead, and Polychlorinated Biphenyls

A formal survey to identify ACM, LBP, and PCBs in building materials was not conducted as part of this Phase I ESA. Based on the age of the building, ACM, LBP, and PCB-containing materials are likely present.

### Radon

According to the NYSDOH, a total of 31 radon tests have been conducted in Bronx County with results indicating that 4% of living areas and 58% of basements have radon concentrations above 4 pCi/L. Based on this data, there is a potential for radon to accumulate in buildings; radon represents an environmental concern.

## **11.0 STATEMENT OF QUALIFICATIONS AND SIGNATURES**

Langan declares that, to the best of its professional knowledge and belief, the personnel who performed this Phase I ESA meet the definition of Environmental Professional as defined in Subsection 312.10 of 40 CFR 312 and that they have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Properties. They have developed and performed the AAls in conformance with the standards and practices set forth in 40 CFR Part 312. Resumes outlining the qualifications of the Environmental Professionals who performed this Phase I ESA are provided in Appendix P.

## **APPENDIX A**

### **Site Reconnaissance Photographs**

Photo 1: View of the entrance of the Site (facing southwest) from Lincoln Avenue.

Photo 2: View of the eastern edge of the Site (facing south) from the intersection of Lincoln Avenue and Bruckner Boulevard.

Photo 3: View of the northeastern corner of the Site (facing south) from Bruckner Boulevard.

Photo 4: View of the northern edge of the Site (facing west).

Photo 5: View of the western edge of the Site (facing south). Apparent fill port seen in photo.

Photo 6: Close-up of apparent fill port.

Photo 7: View of the northern-adjacent properties (across Bruckner Boulevard), facing north.

Photo 8: View of the western-adjacent property (facing west).

Photo 9: View of the eastern-adjacent property (facing southeast) from the intersection of Lincoln Avenue and Bruckner Boulevard.

Photo 10: View of the southeastern-adjacent active dirt, concrete, rock, gravel, stone and sand processing facility (facing east).

Photo 11: View of the southern-adjointing lot (Block 3216, Lot 35), facing west. Third Avenue Bridge in background.

Photo 12: View of the Harlem River and railroad (facing southeast), located south of the Site.

Photo 13: View of the Site (facing west) from Lincoln Avenue. The fence dividing Oz Moving & Storage property from the Third Avenue Transit Inc. property is shown.

Photo 14: View of the Third Avenue Transit Inc. property parking lot (facing northwest).

Photo 15: View of the Harlem River from the Oz Moving & Storage property (facing south).

Photo 16: View of the Oz Moving & Storage parking area (facing northwest).

Photo 17: View of the Oz Moving & Storage parking area (facing west).

Photo 18: View of the Third Avenue Transit Inc. property parking area (facing east).

Photo 19: View of the Third Avenue Transit Inc. property parking area (facing north). Building office area shown to the right of the photo.

Photo 20: View of parking area storm drain.

Photo 21: View of apparent historical fill port associated with the closed-in-place USTs along the eastern edge of the Site.

Photo 22: View of the apparent former vent pipes associated with the closed-in-placed USTs.

Photo 23: View of miscellaneous vehicle repair equipment located along the northwestern wall of the Oz Moving & Storage warehouse.

Photo 24: View of portable vehicle jacks.

Photo 25: View of 275-gallon hydraulic oil AST located in the Oz Moving & Storage warehouse.

Photo 26: View of miscellaneous product storage; including, motor oil, transmission oil, washer fluid, and coolant.

Photo 27: View of several 55-gallon drums of motor oil, washer fluid, etc.

Photo 28: View of several 5 gallon buckets of lacquer thinner, brake fluid, etc.

Photo 29: View of miscellaneous petroleum- and solvent based vehicle repair/maintenance products.

Photo 30: View of recent evidence of spill beneath vehicle and absorbent material.

Photo 31: View of floor drain.

Photo 32: View of miscellaneous equipment.

Photo 33: View of welding area in the Oz Moving & Storage warehouse.

Photo 34: View of the ceiling of the Oz Moving & Storage warehouse.

Photo 35: View of the paint room in the Oz Moving & Storage warehouse.

Photo 36: View of painting supplies/product storage.

Photo 37: View of the material storage within the Oz Moving & Storage warehouse.

Photo 38: View of the material storage within the Oz Moving & Storage warehouse.

Photo 39: View of the Third Avenue Transit Inc. warehouse bus storage (facing east).

Photo 40: View of the Third Avenue Transit Inc. office area entrance.

Photo 41: View of the two hydraulic lifts located with the Third Avenue Transit Inc. warehouse.

Photo 42: View of the runoff channel floor drain.

Photo 43: View of the oil/water separator.

Photo 44: View of the apparent oil/water separator leak detector monitor.

Photo 45: View of the miscellaneous 55-gallon product storage drums.

Photo 46: View of recent signs of surficial staining associated with fluid spills.

Photo 47: View of recent signs of surficial staining associated with fluid spills.

Photo 48: View of the 275-gallon diesel exhaust fluid AST located with the Third Avenue Transit Inc. warehouse.

Photo 49: View of recently applied absorbent material located within the Third Avenue Transit Inc. warehouse.

Photo 50: View of floor drain.

Photo 51: View of equipment and product storage area within the Third Avenue Transit Inc. warehouse.

Photo 52: View of vehicle battery storage.

Photo 53: View of petroleum- and solvent-based vehicle maintenance chemicals.

Photo 54: View of the 275-gallon hydraulic oil AST located within the Third Avenue Transit Inc. warehouse.

Photo 55: View of the brake cleaning area of the Third Avenue Transit Inc. warehouse.

Photo 56: View of the area located immediately outside the Oz Moving & Storage warehouse, along the southwestern edge of the Site.

Photo 57: View of the area located immediately outside the Oz Moving & Storage warehouse, along the southwestern edge of the Site.

Photo 58: View of the corroded drum and soil staining area located immediately outside the Oz Moving & Storage warehouse, along the southwestern edge of the Site.

Photo 59: View of the boiler room located in the eastern area of the Third Avenue Transit Inc. building.

Photo 60: View of the Third Avenue Transit Inc. office space.

---

In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"), the User must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. The User is defined as the party seeking to use Practice E1527 to complete an environmental site assessment of the property. A User may include, without limitation, a potential purchaser of property, a potential tenant of property, an owner of property, a lender, or a property manager. These inquiries must also be conducted by the EPA Brownfield Assessment and Characterization grantees. The User should provide the following information to the environmental professional. Failure to conduct these inquiries could result in a determination that "all appropriate inquiries" is not complete.

---

### General Information

**User/Client Name (s):** 101 Lincoln Associates, LLC

**Property Name:** 101 Lincoln Avenue

**Address:** 101 Lincoln Avenue

Bronx, NY Block 2316 Lot #1

**Property Type:** Industrial

### **Type of Property Transaction:**

Purchase of property

Financing of property

Sale of property

Ground Lease

Build to Suit Lease

Other \_\_\_\_\_

**Reason Why Phase I ESA is required:** Acquisition

**Site Contact (s):** Arthur A. Micheli, Tel. 718-585-1800

### Required Information

The citation at the end of each item (e.g. 40 CFR 312.XX) is the section of EPA's November 1, 2005 AAI Final Rule which discusses that item.

# LANGAN

**(1.) Environmental liens that are filed or recorded against the property (40 CFR 312.25).** Yes No

Did a search of recorded land title records (or judicial records, where appropriate, see Note 1 below) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?

Note 1 – In certain jurisdictions, federal, tribal, state or local statutes or regulations specify that environmental liens and AULs be filed in judicial records rather than in land title records. In such cases judicial records must be searched for environmental liens and AULs.

**(2.) Activity and use limitations that are in place on the property or that have been filed or recorded against the property (40 CFR 312.26(a)(1)(v) and (vi)).** Yes No

Did a search of recorded land title records (or judicial records where appropriate, see Note 1 above) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?

**(3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).** Yes No

Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

**(4.) Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29).** Yes No

- (a.) Does the purchase price being paid for this property reasonably reflect the fair market value of the property? [If no, proceed to Part 5.]
- (b.) If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

**(5.) Commonly known or reasonably known or reasonably ascertainable information about the property (40 CFR 312.30).** Yes No

Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user,

- (a.) Do you know the past uses of the property?
- (b.) Do you know of specific chemicals that are present or once were present at the property?
- (c.) Do you know of spills or other chemical releases that have taken place at the property?
- (d.) Do you know of any environmental cleanups that have taken place at the property?

**(6.) The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).** Yes No

Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?

Re: Phase I Environmental Site Assessment (ESA)  
101 Lincoln Avenue  
Bronx, New York 10454  
Block: 2316; Lot: 1

Dear Mr. McLean:

The following report summarizes a Phase I Environmental Site Assessment (ESA) of the above-referenced location (hereinafter referred to as the Property or the Site), performed by CA Rich Consultants, Inc. (CA RICH). This Phase I ESA was completed in substantive conformance with the scope and limitations of ASTM Practice E 1527-2005, which sets forth nationally accepted Phase I guidance criteria.

If you have any questions pertaining to this report, please feel free to contact the undersigned. We thank you for the opportunity to provide you with our professional environmental services.

Sincerely,

CA RICH CONSULTANTS, INC.

**CA RICH ENVIRONMENTAL SPECIALISTS****EXECUTIVE SUMMARY**

CA RICH CONSULTANTS, INC. ("CA RICH") of Plainview, New York has completed this Phase I Environmental Site Assessment (ESA) of the property located at 101 Lincoln Avenue in the Bronx, New York (hereinafter referred to as the "Property" or "Site"). CA RICH performed this Phase I ESA in substantive conformance with the suggested informational requirements, scope and limitations of the American Society for Testing & Materials (ASTM) prevailing Standard Practice E 1527-05 for environmental site assessments. Any exceptions to, or deletions from, these practices are described in Section 1.4 of this Report.

The information and findings presented herein are based upon the data acquired during the Property visit, and through pertinent information obtained from regulatory agencies, responsible persons knowledgeable about the Property, and other historical information sources.

The subject Property located at 101 Lincoln Avenue consists of an approximate 133,700 square foot plot of land that contains a one-story, L-shaped warehouse building with a connected two-story office building occupying approximately 63,064 square feet in the Bronx, New York. The Property is divided into two sections with Verizon occupying the eastern portion of the Property and Atlantic Express Bus occupying the western portion. Verizon utilizes the Property for the storage of equipment, materials, and vehicles, vehicle repair, and as office space. Atlantic Express Bus utilizes the Property for the storage of equipment, materials, and vehicles, and school bus repairs. The building is connected to public water and sewers and is heated via natural gas burners. The Property was previously occupied by the New Jersey Rail Road Bronx Freight from 1908 to 1951 and is located in a historic industrial/commercial area.

Based upon the information reviewed for this Phase I ESA, we have identified the following "Recognized Environmental Conditions" (RECs) in connection with the subject Property.

**REC-1** Three floor drains were found through the Atlantic Express Bus garage. One drain was opened and found to contain a soft bottom with a depth of approximately 5 inches. We recommend further investigating these drains to determine if they have an earthen bottom and collect soil samples from the drain(s) if necessary.

**REC-2** A hydraulic lift was identified in the Verizon warehouse. In addition, two possible hydraulic lift covers were identified in close proximity to the hydraulic lift. We recommend soil testing in an around the hydraulic lift to determine if a release of hydraulic fluid has occurred. In addition, we recommend further investigating the two possible hydraulic lift covers. If these covers are determine to contain or previously contained hydraulic fluid we recommend additional soil sampling.

**REC-3** An oil/water separator and associated well covers were identified in the Verizon warehouse. We recommend obtaining the maintenance records associated with the oil/water separator and well covers to determine if their operation has had an impact to the neighboring soils and/or groundwater.

**HREC-1** 12 550-gallon diesel tanks and 2 550-gallon gasoline tanks were abandoned in place on the Property in 1991 and 1992. During the abandonment only soil sample was collected. We recommend additional soil sampling to determine the integrity of the soil in the former tank area.

**HREC-2** The Property had been occupied by the New Jersey Rail Road Bronx Freight from 1908 to 1951. It was also used for coal storage between 1891 and 1908. Transformers and motor fuels are typically used in railroad yards. We recommend testing the soils for PCBs, volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and metals including lead.

**CA RICH ENVIRONMENTAL SPECIALISTS****1.0 INTRODUCTION****1.1 Purpose**

The purpose of this Phase I ESA is to identify ASTM-defined Recognized Environmental Conditions associated with the subject Property. This assessment was conducted in substantive conformance with ASTM's "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process" E 1527-05.

This Standard is designed to constitute "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in CERCLA 42 USC 9601 (35) (B). Consequently, this assessment investigates the historical land use and present-day condition of the Property in accordance with accepted standards prevailing within the lending industry and the environmental assessment profession. The term *recognized environmental conditions* does not include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate regulatory agencies.

**1.2 Detailed Scope of Services**

The following general activities were performed by CA RICH as part of this Phase I ESA:

- Visual and physical inspection of representative reasonably accessible interior and exterior areas of the Property by an experienced CA RICH Environmental Professional (EP), whom also satisfies the educational and experience qualification requirements stipulated under the Federal EPA's companion "AAI" Rule, effective November 1, 2006. The review included a search of environmental liens for the property, activity and use limitations, if any, and any applicable engineering and institutional controls, information data gaps, as well as building practices at adjacent properties;
- Investigation of historical land use practices including review of Local Directory publications, USGS topographic maps, aerial photographs, and historical Sanborn® Maps, discussions with knowledgeable parties associated with the Property and other readily available records or reports (i.e., prior Phase 1's);
- Review and inquiry of relevant Federal, State, and Local database records pertaining to the subject Property and properties located within approximate minimum search distances for the purposes of identifying potential sources of any migrating hazardous substances or petroleum products; and,
- Review of the Property's proximity to ecologically sensitive areas or media (i.e. parks, rivers, underlying ground water, etc.) using records and maps published by the Federal United States Geological Survey (USGS) along with neighborhood reconnaissance.

**ca RICH ENVIRONMENTAL SPECIALISTS****1.3 Significant Assumptions**

For the purpose of performing this Phase I ESA, CA RICH assumes that information provided to us by the Client, database search companies, historical records, interviews, etc. is accurate. Our findings and conclusions regarding the potential environmental impact of nearby, off-site buildings or adjoining property facilities upon the subject Property are based upon readily available information from review of the environmental databases and observable conditions at the time of inspection by the EP. Any further, more detailed review or interpretation of a specific file or record is beyond the standard Phase I scope of work approved at this time.

Further, the Environmental Professional investigator(s) cannot be held responsible for either innocent or intentional misrepresentations, inaccurate statements, claims made, or information furnished to CA RICH regarding the environmental integrity of this Property.

**1.4 Limitations and Exceptions**

CA RICH performed this Phase I ESA of the subject Property in accordance with good commercial and customary practice and generally accepted protocols within the consulting industry as set forth in ASTM E1527-05. CA RICH has included a review of some non-ASTM issues for this assessment including asbestos, polychlorinated biphenyl's (PCBs), and radon gas; otherwise there have been no intentional deviations or deletions from this practice in the performance of this assessment. The assessment included a visual (observable) inspection of representative areas of the Property, the examination of readily ascertainable and practically reviewable public records concerning the current and prior use of the Property, recorded environmental conditions, and further discussions with responsible and knowledgeable parties associated with the Property.

The findings, conclusions and professional opinion set forth in this environmental report are based upon the limited information available to CA RICH during this assessment period. If new information becomes available concerning the Property or the future property and its environs relative to existing or future intended land use after the date of this report, the findings and conclusions contained herein may be subject to modification. While this assessment was performed in accordance with good commercial and customary practice and generally accepted protocols within the environmental consulting industry, CA RICH cannot guarantee that the Property is completely free of hazardous substances or other materials or conditions that could subject the Owner(s) to potential liabilities. The presence or absence of any such condition may only be revealed or confirmed through the sample collection and analysis of any stored or suspect residual liquids, gels, or solid waste materials, chemicals, miscellaneous hazards, residues, biologicals, odors, soot, refuse, building materials, underlying fill, fluids, or soils, soil vapors, ground water, and/or surface water etc.

Subsurface conditions were not field-investigated and were outside the scope of this Phase I ESA and therefore, may differ from the conditions implied by records review and/or surficial observations. Building contamination, waste emplacement, lead-based paint, asbestos, fill, and soil or groundwater contamination would be disclosed to CA RICH only by surficial indications, interviews, or available regulatory records. In the absence of such information, these possible conditions may only be revealed through further specific media testing or sampling and testing methodologies all of which are beyond the scope of this 'Phase I' assessment, with exceptions as reported herein.

**Ca RICH** ENVIRONMENTAL SPECIALISTS

Because there are limitations to the amount of time and resources expended at this level of an initial Phase I Assessment, CA RICH cannot guarantee that all existing and pertinent Property information was reviewed. There may remain data gaps and/or additional relevant information not discovered through the standard level of all appropriate inquiry employed at this time. However, we do acknowledge that to the best of our belief, the readily ascertainable information we have supplied is true, complete and correct, and that facts or figures that may have an adverse effect upon the validity of the findings and professional opinion provided herein have not purposely been omitted.

CA RICH has no interest other than professional in this Environmental Site Assessment and neither its performance, nor compensation for same, is contingent upon the findings and/or opinion or recommendation(s), if any, represented herein. Any litigation matters that may pertain to the Property are not discussed and this Report is not a legal opinion.

**1.5 User Reliance**

This Report is intended for the sole use of the Client. It may not be used or relied upon by any other party, or third party, without the written consent of CA RICH. The scope of services performed in execution of this evaluation may not be appropriate to satisfy the needs of other users, future occupants, future prospective purchasers, and/or altered land usage, or altered future land usage, and the use or re-use of this document or the findings, professional opinion, or aforementioned recommendations provided herein is at the risk of said user.

**2.0 PROPERTY DESCRIPTION****2.1 Location and Legal Description**

The subject Property is an irregularly shaped parcel of land located at 101 Lincoln Avenue in the southwestern portion of the Bronx, NY. The Property lies on the northwest side of Lincoln Avenue, just west of East 132<sup>nd</sup> Street, southeast of the Harlem River and the Third Avenue Bridge (see Figure 1). The Tax Map designation for the Property is Block: 2316; Lot: 1 and is designated little "e" for restricted hazmat/noise/air.

**2.2 Description of Property**

The subject Property located at 101 Lincoln Avenue consists of an approximate 133,700 square feet plot of land that contains a one-story, L-shaped warehouse building with a connected two-story office building occupying approximately 83,064 square feet in the Bronx, New York. The Property is divided into two sections with Verizon occupying the eastern portion of the Property and Atlantic Express Bus occupying the western portion. Verizon utilizes the Property for the storage of equipment, materials, and vehicles, vehicle repair, and as office space. Atlantic Express Bus utilizes the Property for the storage of equipment, materials, and vehicles, and school bus repair. The building is connected to public water and sewers and is heated via natural gas burners.

**2.3 Description of Surrounding Area**

The Property is located in the Bronx, New York and is bordered by commercial/industrial structures to the north, east and south. To the west of the Property are the Harlem River and railroad tracks.

**2.4 Current Uses of the Property**

The Property is occupied by two tenants; Verizon and Atlantic Express Bus. Verizon utilizes the Property for the storage of equipment, materials and vehicles, vehicle repair, and as office space.

**Ca RICH ENVIRONMENTAL SPECIALISTS**

Atlantic Express Bus utilizes the Property for the storage of equipment, materials, and vehicles, and school bus repair.

**2.5 Current Uses of Adjoining Properties**

The Property is situated on the west side of Lincoln Avenue and across from East 132<sup>nd</sup> Street in a primarily commercial/industrial area of the Bronx, New York. Adjoining properties include the following:

- North: Bruckner Boulevard and commercial buildings.
- South: Harlem River and railroad tracks.
- East: Glass Works building and Felix Industries construction
- West: Harlem River and the Third Avenue Bridge

**2.6 Site Geology & Hydrogeology**

The subject Property, located in the southwestern portion of the Bronx, is situated upon the Inwood Marble, which is a member of the Wappinger Group. The Wappinger Group consists of metamorphosed dolomitic rocks of Cambrian and Ordovician age. The actual soil type, depth to groundwater and flow direction can only be obtained through a site-specific hydrogeological study including the physical installation of soil borings and wells, which is beyond the scope of this Phase I ESA. However, reviewing a USGS topographic map the, the inferred groundwater flow is in westerly direction towards the Harlem River.

**3.0 USER-PROVIDED INFORMATION**

ASTM E 1527-05 defines the "User" as: *"the party seeking to use practice E 1527-05 to complete an environmental site assessment of the property"*. The user is responsible for providing certain information (if available) to qualify for one of the Landowner Liability Protections offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001. Failure to provide this information could result in a determination that *"all appropriate inquiry"* is not complete. As such, a User Questionnaire was prepared in conformance with E 1527-05, X3; and was submitted to the client to satisfy the requirements for user-provided information. However, it was determined that the questions contained in the Questionnaire could best be answered by the owner, Mr. A. Lawrence Gerosa. As such, a copy of CA RICH's questionnaire was forwarded to Mr. Gerosa as well. Information from the completed questionnaire was used to complete the following sections along with an environmental lien search provided by CA RICH. A completed questionnaire is included in Appendix D.

**3.1 Title Records**

Title records were not provided by the User.

**3.2 Environmental Liens**

An environmental lien search was not provided by the User, but was requested by CA RICH from EDR and received on September 24, 2007. The environmental lien search reports that there are no environmental liens or activity and use limitations (AULs) for the Property. In addition, Mr. Gerosa indicated that there are no environmental liens held against the Property.

**3.3 Specialized Knowledge**

The Property owner indicated that the Property contained railroad tracks and a turntable that was used for the shipping of railroad freight prior to Property purchase in 1966.

**Ca RICH ENVIRONMENTAL SPECIALISTS****3.4 Commonly Known or Reasonably Ascertainable Information**

Mr. Micheli indicated that the Property contained 12, 550-gallon underground diesel storage tanks and 2, 550-gallon underground gasoline storage tanks that were abandoned in place in 1991 and 1992 by Gaservice. In addition, he indicated that the Property was underlain by approximately 10-inches of compacted stone prior to the construction of the building in 1960's.

**3.5 Valuation Reduction for Environmental Issues**

A valuation reduction for environmental issues was not provided by the User and is not included as part of this Phase I ESA. According to ASTM E1527-2005 this is considered a data gap; however, this data gap is not considered to have a significant impact on the findings of this assessment. However, Mr. Gerosa did indicate that the Property value is comparable to market value.

**3.6 Owner, Property Manager, and Occupant Information**

A telephone interview was conducted with the owner of the Property, Mr. A. Lawrence Gerosa on September 27, 2007. Mr. Gerosa indicated that the Property was formerly used as a crane repair, storage and painting facility from 1966 to approximately 1991. The previous use of the Property was by the New Jersey Central Rail Road Terminal. Mr. Gerosa is unaware of any environmental conditions at the Property. No other information related to the environmental integrity of the Property was provided.

**3.7 Reason for Performing Phase I**

The purpose of performing this Phase I ESA is to satisfy the environmental due diligence requirements for the acquisition of a loan by the Client.

**4.0 SITE RECONNAISSANCE****4.1 General**

The subject Property was inspected by Jason Cooper, Environmental Professional, of CA RICH on September 13, 2007 with the assistance of Property manager Mr. Arthur Micheli. The Property contains an L-shaped building with raised warehouse ceilings and is situated along the north, northwest and east property lines. The southeast portion of the building does not contain raised warehouse ceilings; rather two-stories used for office space. The Property is occupied by Atlantic Express Bus along the northwest portion and Verizon along the north and east portions of the Property. Driveways along Lincoln Avenue provide access to both businesses. Photographs were taken to document observations at the time of the walk-through inspection. Selected photographs illustrating salient observations are included in Appendix A.

**4.2 Methodology and Limiting Conditions**

The inspection on September 13, 2007 was conducted with the assistance of the Property manager, Mr. Arthur Micheli. The Property was inspected in the following order:

- A general walkthrough of the Atlantic Express Bus parking lot and observing the west portion of the Property along the Harlem River;
- A general walkthrough of each individual garage bay of the Atlantic Express Bus garage;
- A general walkthrough of the Verizon building, including the second floor lunch room, beginning at the north end of the building and then proceeding in a southeasterly direction towards the office building;

**CA RICH** ENVIRONMENTAL SPECIALISTS

- A general walkthrough of the office space of the two-story building near southeast corner of the Property, and
- A general walkthrough of the Verizon parking lot and then a walk around the perimeter of the Property identifying neighboring properties.

The Verizon portion of the Property contained a large amount and variety of equipment and materials stored in boxes. All of the equipment and materials were not inspected; however, Mr. Micheli indicated that materials were of a non-hazardous nature. In addition, the floors in the warehouse portion of the Verizon Property were covered in numerous areas by either vehicles or equipment. It is unknown what, if anything exists beneath the vehicles and equipment.

#### 4.3 Interview Information

Mr. Arthur Miceli assisted Jason Cooper, Environmental Professional, of CA RICH during the Site walkthrough and provided information about the subject Property.

In addition, a telephone interview was conducted with the President of Gerosa Incorporated, Mr. A. Lawrence Gerosa on September 27, 2007. Mr. Gerosa indicated that the Property was formerly used as a crane repair, storage and painting facility from 1966 to approximately 1991. The previous use of the Property was by the New Jersey Central Rail Road Terminal. A copy of the interview questionnaire is included as Appendix D.

#### 4.4 Exterior Observations

The subject Property contains one continuous L-shaped building that is situated along the north, northwest and eastern portions of the Property boundary. The building is constructed of brick and mortar and the parking lot is a mix of concrete and asphalt. The Property is divided by a chain link fence that separates Atlantic Express Bus on the west from Verizon on the east. According to the Property manager, Mr. Micheli, Atlantic Express Bus occupies approximately 20% of the Property and Verizon 80%.

The Atlantic Express Bus Property contains three two-story garage bays and three raised warehouse garage bays. The parking lot contains one storm drain near the Harlem River along the western Property boundary, parked buses and vehicles throughout, a dumpster near the eastern most garage bay door and near the southeast fence line, tires and miscellaneous parts near the northeast fence boundary and the Harlem River and railroad tracks to the west.

The Verizon Property contains three raised warehouse garage bays and a two-story office building on the southeastern portion of the Property. The parking lot contains an empty propane cylinder cage, portable generators, personal and work vehicles, two storm drains, two dumpsters, a security booth and miscellaneous equipment.

#### 4.5 Interior Observations

The interior of the Atlantic Express Bus portion of the Property is constructed of concrete floors, painted concrete block walls and a raised metal ceiling. The building is heated via a combination of natural gas burners and electric heaters. Atlantic Express Bus utilizes the Property for the storage of equipment, materials and vehicles, and maintenance and repair of buses. As such, there are typical vehicle maintenance and repair materials and equipment used and stored throughout. Equipment includes numerous portable electric vehicle jacks, two air compressors, and two oxygen tanks. Materials include vehicles tires, four 30-gallon drums of Mobil grease, one 55-gallon drum of transmission fluid, one gallon of Simoniz wax, one 55-gallon drum of Z-100 degreaser, three 55-gallon drums of washer fluid, one 55-gallon drum of general lacquer thinner, one 55-gallon drum of used oil, one 30-gallon drum of Mobil synthetic oil, two 5-gallon buckets of used oil, twenty-nine 5-gallon buckets of Simoniz Alkane all purpose hard surface cleaner, and fifteen used car batteries. All of the drums appeared to be in good condition. Minor petroleum

**CA RICH ENVIRONMENTAL SPECIALISTS**

staining was identified in each of the garage bays, of which fresh staining was covered with a granular oil absorbent material. A total of two floor drains were identified in the garage bays.

The interior of the Verizon portion of the Property is used for storage of vehicles, equipment, and materials, vehicle repair and office space. The warehouse/vehicle storage area is constructed of concrete floors, painted and unpainted concrete block walls and a raised metal ceiling. Vinyl floor tiles were identified on floor of the second floor mechanics lunchroom and first floor dispatch office. The building is heated via a natural gas burner. A metal grated runoff channel for the collection of runoff water is located in the middle of the warehouse and runs the length of the parking area in the warehouse. The grated runoff channel is connected to an underground oil/water separator tank located near the northeastern portion of the building. Two manhole covers labeled as "monitoring well" are located within approximately 5-feet of the oil/water separator. Inside the manhole covers are two pipes possibly associated with leak detection for the oil/water separator. An active hydraulic vehicle lift is centrally located along the northeast wall of the building. The lift is located within a fenced area containing numerous 55-gallon drums of motor oil, used motor oil, and anti-freeze along with small quantities of spray cans of petroleum base products. In addition, two orange covers were identified west of the hydraulic lift. According to Mr. Mitchell he believes these may be non-activated vehicle lifts. It is unknown if these covers were filled with hydraulic fluid. Two floor drains were identified on the northern portion of the Verizon building in an office/storage area. The boiler room is located near the southeast portion of the building and contains 2 hot water tanks, three floor drains, and a sump pit.

The interior of the Verizon office space consists of painted walls, vinyl floor tiles, carpeting, and drop in ceiling tiles. Typical office equipment, materials and supplies were identified throughout the office.

#### **4.6 Storage Tanks**

Storage tanks, both aboveground and underground, are often used for storing fuel, waste oils, solvents, and other waste and/or potentially hazardous materials. The principal concern from storage tanks is leakage of contents due to corrosion of the tank or associated lines. The leakage may result in migration of the stored material onto the subject and/or neighboring properties via soil migration or underlying shallow groundwater flow. In general, soil and groundwater contaminated by leaks from on-site storage tanks may constitute an environmental or health hazard.

According to a letter provided by the User, in 1991 and 1992 a total of 12 550-gallon underground diesel storage tanks and two 550-gallon underground gasoline storage tanks were abandoned in place by Gaservice, Inc. The tanks were pumped of their contents and then a concrete slurry was pumped into the tanks for proper abandonment. In addition associated product and electrical piping were capped off and four pump dispensers were removed. The vent and fill lines were removed and sealed with concrete. There are no other storage tanks known to have existed on the Property.

#### **4.7 Toxic / Hazardous Materials**

No evidence of the on-site storage or disposal of hazardous materials was observed on the Property with the exception of the previously mentioned petroleum based products used in the routine maintenance and repair of the Atlantic Bus Express buses and Verizon vehicles.

#### **4.8 Proximity to Environmentally Hazardous and/or Sensitive Areas**

The Property is situated within a commercial, industrial, and residential area of the Bronx, New York. The computerized database records (Appendix C) report approximately 127 sites in the categories of government reported sites located in proximity to the Property in accordance with ASTM E 1527-05 minimum search distances. Any locatable sites have been mapped on the

**Ca RICH ENVIRONMENTAL SPECIALISTS**

radius search maps included in Appendix C and are discussed in further detail in Section 6.0 of this Report.

The subject Property is located on the west side of Lincoln Avenue across from 132<sup>nd</sup> Street in the Bronx, New York. The database map indicates that there are no public supply wells located within 1-mile of the Property. There are no bodies of water located on the Property; however, the Harlem River is located only a few feet west of the Property boundary. There are Federal Wetlands mapped within ¼-mile of the Property. The Property is located within a FEMA 100-year flood zone area.

## 5.0 HISTORICAL LAND USE PRACTICES

In order to further determine the past land use and the Property's developed use, historical aerial photographs, historical topographic maps, Sanborn® maps, and Local Directory records were reviewed.

### 5.1 Aerial Photography

The following tables summarize the findings of our review of historical aerial photographs.

Year	Description and Comments
1954	The subject Property appears with a round structure occupying the majority of the site. There are unknown structures located along the southwest portion of the Property near the Harlem River. The areas surrounding the Property are densely developed with a mix of commercial and residential structures. A bridge is located immediately northwest of the Property.
1966	The subject Property does not contain any structures. The areas surrounding the Property appear similar to 1954.
1975	The subject Property appears with a structure that resembles the size and configuration of the present-day structure. The areas surrounding the Property appear similar to 1966.
1984	The subject Property and surrounding areas appear similar to 1975.
1994	The subject Property and surrounding areas appear similar to 1975.

Review of historical aerial photographs revealed that the subject Property was developed with a large round structure in the 1954 aerial photograph. In the 1966 aerial photograph the Property does not contain any structures and then in the 1975 aerial photograph the Property contains a structure that resembles the size and configuration of the present-day structure. The subject Property and surrounding areas have remained relatively unchanged since 1975. The Property is located in a historically densely developed commercial and residential area. Copies of the aerial photographs reviewed for this Report are attached as Appendix D.

**CA RICH ENVIRONMENTAL SPECIALISTS****5.2 Topography**

Topographic map coverage of the Property exists for the years 1897, 1947, 1966, 1979, and 1995. The following table summarizes the findings of the topographic map review.

Year	Description and Comments
1897	The subject Property appears with a structure and is located in an area densely developed with structures.
1947	The subject Property appears with a round structure and located north west of a rail yard. The surrounding areas appear similar to 1897.
1966	The subject Property does not contain any structures. The areas surrounding the Property are denoted as densely populated.
1979	The subject Property appears with a structure that resembles the size and configuration of the present-day structure. The areas surrounding the Property are denoted as densely populated.
1995	The subject Property and surrounding areas appear similar to 1979.

Review of the historical topographic maps dating back to 1897 indicates that the Property was developed prior to 1897. In 1947 the Property appears with a round structure and in 1966 the Property does not contain any structures. In 1979 the Property contains a structure that resembles the size and configuration of the present-day structure. The Property appears in an area denoted as densely populated in 1979. A copy of each topographic map is attached to this report as Appendix D.

**5.3 Sanborn Fire Insurance Mapping**

Microfilm collections of fire insurance maps available through the Library of Congress, University Publications of America, and various public local sources were searched for local area coverage. Sanborn Maps are detailed maps that show the lot configuration and improvements and may contain information regarding historical ownership, land use, and hazardous or regulated materials storage. The 1891 Sanborn Map is the only map containing information for properties located southeast of Lincoln Avenue. The following table summarizes the findings of the Sanborn Maps review.

Year	Description and Comments
1891	The subject Property is identified as containing building materials (Bell & Son), sand, North and East River Steamboat Co., coal yard, livery stable, and Ice Co., yard. These businesses line the perimeter of the Property along Lincoln Avenue and Southern. To the northeast, across Southern, is a cabinet factory, mousing mill, railway car and stables, stone yard, and Morrisania and Fordham. To the south, across Lincoln Avenue, is the New York, New Haven, and Hartford Rail Road Co., Freight Depot and ice house. To the southeast is a manufacturing establishment with stores below. To the east is a piano factory and New York Woodworking. The Harlem Bridge is located northwest of the Property and the Harlem River lines the southwestern Property boundary.
1908	The subject Property is identified as Central Rail Road of New Jersey, Bronx Freight Terminal. The Property contains a railroad turntable and a float near the southwestern portion of the Property along the Harlem River. To the northeast, across E. 133 <sup>rd</sup> Street (previously named Southern), is the Union Railway Co. store yard, auto building, a hotel, contractor office, and a mixed used store/dwelling building. The Third Avenue Bridge is located to the northwest.

**RICH ENVIRONMENTAL SPECIALISTS**

1935	The subject Property appears similar to 1908; however, a coal shed and locomotive house are depicted. The areas surrounding the Property are primarily commercial businesses. Most notable of these are the AV Rail Road System which contains a 275-gallon gas tank, a private garage containing a gasoline tank, and an auto house containing a 275-gallon buried gasoline tank. These tanks are located northeast of the Property. In addition, E. 133 <sup>rd</sup> Street is now identified as Bruckner Boulevard.
1944	The subject Property and surrounding areas appear similar to 1935; however, an auto body builder is identified to the northeast.
1946	The subject Property and surrounding areas appear similar to 1944; however, the gasoline tank identified at the auto house in 1935 is not depicted. In addition, the auto house is now identified as a private garage.
1947	The subject Property appears similar to 1946; however, the coal shed is not depicted. The areas surrounding the Property also appear similar, however, the gasoline tank identified at the AV Rail Road System is not depicted and in its place is oil storage.
1951	The subject Property and surrounding areas appear similar to 1947.
1968	The subject Property is identified as Gerosa Haulage Corp and resembles the size and configuration of the present-day building. The Property contains a storage yard, crane repair, paint shop, crane paint shop, blacksmith shop, garage repair shop, and an office. The surrounding areas appear similar to 1951; however, an auto repair shop is identified northeast of the Property on E. 134 <sup>th</sup> Street and Lincoln Avenue.
1969	The subject Property and surrounding areas appear similar to 1968.
1977	The subject Property and surrounding areas appear similar to 1968; however, the Property now contains a warehouse.
1978, 1980, 1981, 1984, 1986, 1989, 1991, 1992, 1993, 1994, 1995, and 1996	The subject Property and surrounding areas appear similar to 1977 and have undergone relatively little change.

Review of the historical Sanborn Maps dating back to 1891 indicates that the Property was developed sometime before 1891. From 1908 to 1951 the Property is identified as containing the New Jersey Central Rail Bronx Freight. From 1968 to 1996 the Property is identified as Gerosa Haulage Corporation and contains a building that resembles the size and configuration of the present-day building. A copy of each Sanborn Map is attached to this report as Appendix D.

**CA RICH ENVIRONMENTAL SPECIALISTS****5.4 Local Directory**

CA RICH conducted a review of available Local Directory records for the subject Property.

Year	Description and Comments
1927, 1931, 1940, 1949, 1956, and 1961	Address is not listed in the research source.
1965	McKinney Caraw L and Masia Philip.
1971	Gerosa Crane Service, Co. Inc. Gerosa Haulage and Warehouse Corp.
1976 and 1983	Gerosa Crane Service, Co. Inc. Gerosa Incorporated
1993	Gerosa Crane Service, Co. Inc. Gerosa Inc. Bronx Gerosa Robert L. Inc.
2000	Felix Industries Gerosa Inc.
1993	Gerosa Inc.

The address is not listed for the subject Property from 1927 to 1961. In 1965 the address is listed with two names. From 1971 to 2005 the Property is listed under the Gerosa name. The areas surrounding the Property appear to be used for residential and commercial purposes. Most notably the Harlem Coal Body Service Company (1949) and Peerless Iron Works (1940 and 1949) were located at 86 Lincoln Avenue. A copy of the City Directory is attached as Appendix E.

**6.0 ENVIRONMENTAL RECORDS REVIEW**

This Section discusses database records maintained by Federal, State and local environmental agencies for the Property and for sites located within an approximate minimum search distance. Available information was compiled from computerized database sources of regulatory agency records. The purpose of this database records review is to help assess the likelihood of problems from migrating hazardous substances or petroleum products. The minimum search distances are specified within ASTM Practice E 1527-05.

The database searches were conducted by EDR at the request of CA RICH on September 11, 2007 (Inquiry Number: 2025257). The existence of an actual toxic hazard at a specific site can be concluded only when government authorities make that determination or when that conclusion is fully documented by the findings of an appropriate site investigation undertaken by licensed professionals.

The resulting database information is briefly summarized below. Complete copies of the database report and radius maps are included in Appendix C. Additional site-specific information was requested elsewhere by CA RICH under the provisions of the Freedom of Information Law (FOIL).

**6.1 Federal**

The number of ASTM federally listed database sites identified in proximity to the Property is tabulated below. The search categories and database review findings are discussed in greater detail below the summary table.

**CB RICH ENVIRONMENTAL SPECIALISTS**

Federal ASTM Database Search Category	Approx. Minimum Search Distance	Subject Property	Total Sites Plotted
EPA National Priority List Sites (NPL)	1.0 miles	Not identified	0
EPA DELISTED NPL	1.0 miles	Not identified	0
EPA CERCLIS Sites	0.5 miles	Not identified	0
EPA CERCLIS-NFRAP	0.5 miles	Not identified	0
CORRACTS	1.0 miles	Not identified	0
RCRIS-TSD	0.5 miles	Not identified	0
RCRIS Lg. Quan. Gen.	0.25 miles	Not identified	0
RCRIS Sm. Quan. Gen.	0.25 miles	Identified	1
ERNS	TP	Not identified	0
FINDS	TP	Identified	0
CONSENT	1.0 miles	Not identified	0
ROD	1.0 miles	Not identified	0
US ENG CONTROLS	0.5 miles	Not identified	0
US INST ENG CONTROL	0.5 miles	Not identified	0

◆ **EPA Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS), National Priorities List (NPL)**

The CERCLIS list is a compilation by the USEPA of sites that the USEPA has investigated or is currently investigating for a release or threatened release of hazardous substances pursuant to the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA), commonly known as the Superfund Act.

Once sites are designated on the CERCLIS list, the USEPA uses its Hazard Ranking System to determine potential risks to human health and the environment. Those CERCLIS sites that present the greatest risk are placed on the National Priority List (NPL), which qualifies the sites to receive remedial funding.

The subject Property was not identified as a CERCLIS or NPL site and there are no CERCLIS or NPL sites located within the approximate search radius of the Property.

◆ **Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS), No Further Remedial Action Planned (NFRAP)**

As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was quickly removed without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat these investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens promote economic redevelopment of unproductive urban sites.

The subject Property is not identified as a CERCLIS-NFRAP site and there are no CERCLIS-NFRAP sites located within the approximate search radius from the Property.

**CA RICH ENVIRONMENTAL SPECIALISTS**

◆ **Delisted National Priority List (Delisted NPL)**

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425. (e), sites may be deleted from the NPL where no further response is appropriate.

The subject Property does not appear as a Delisted NPL site and there are no Delisted NPL sites located within the approximate search radius from the Property.

◆ **Corrective Action Activity (CORRACTS)**

CORRACTS is a list of handlers with RCRA Corrective Action Activity. It reports which nationally defined corrective action core events have occurred for every handler that has had a corrective action activity.

The subject Property is not identified as a CORRACTS site and there are no CORRACTS sites located within the approximate search radius from the Property.

◆ **Resource Conservation and Recovery Act (RCRA) (RCRIS-TSD)  
Large and Small Quantity Generators (LQG/SQG)**

RCRA was enacted to regulate facilities that generate, store, transport, or dispose of hazardous waste. These facilities must file notification forms with the EPA, which maintain the records in the RCRA Information System (RCRIS) Notifiers database. Inclusion on the RCRIS list does not signify contamination or mishandling of hazardous materials by hazardous waste Notifiers. RCRIS-listed sites are not indicative of an environmental concern unless an actual hazard is known to exist.

The subject Property is listed as an SQG and there is one SQG located within the search radius of the subject Property identified as Michael Angelo Co. Database records indicate that the subject Property and Michael Angelo Co. do not have outstanding violations and is in compliance with Federal regulations.

◆ **Emergency Response Notification System (ERNS)**

The Emergency Response Notification System (ERNS) is a national database used to collect information on reported releases of oil and hazardous substances. Pursuant to the ASTM Practice E 1527-05, the ERNS database is searched only for the subject Property.

The subject Property is not identified in the U.S. EPA ERNS database.

◆ **Facility Index System/Facility Identification Initiative Program Summary Report (FINDS)**

The Facility Index System (FINDS) contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

The subject Property is identified in the U.S. EPA FINDS database due to its RCRIS-SQG status (see RCRIS in Section 7.1).

**RICH ENVIRONMENTAL SPECIALISTS****◆ Records of Decision (ROD)**

ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid cleanup.

There have been no RODs documented for the subject Property and there are no ROD sites, located within the approximate search radius from the Property.

**◆ EPA CERCLIS Consent Order**

A signed Order on Consent signifies major legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites.

There have been no Federal Consent Orders signed with respect to the subject Property. There are no documented Federal Consent Orders reported within the approximate search radius from the Property.

**◆ US Engineering (ENG) Controls**

The US Engineering Controls Site List is a listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

There are no documented Engineering Controls listed for the subject Property and there are no Engineering Controls identified within the approximate search radius from the Property.

**◆ US Institutional (INST) Controls**

The US Institutional Controls List is a listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

There are no documented Institutional Controls listed for the subject Property and there are no Institutional Controls identified within the approximate search radius from the Property.

Re: T.E.P. Analysis  
14-550 gallon tanks

Dear Mr. Gerosa:

On Tuesday, July 16, 1991, we performed a "Tank Environmental Profile" (TEP) analysis of the 12-550 gallon diesel and 2-550 gallon gasoline underground tanks located at your facility. The analysis consisted of the following three main parts:

- 1) Measuring soil to tank voltage potentials for each tank.
- 2) Measuring soil resistivity.
- 3) Collecting and analyzing soil samples at various locations around the tank field.

After completing the above procedures, all information and samples were sent to the "ILFC" testing laboratory, who are the originators of the TEP analysis. Their finding and recommendations are enclosed with this report.

The following summarizes their findings:

- The tanks are in fairly good condition with regard to overall corrosion.
- The soil resistivity is relatively low, and the moisture content and soil microbe count are fairly high, all of which could lead to an increase in corrosion and therefore a shorter tank life.
- There exists some aged diesel fuel contamination in all holes sampled, as shown on the site map (amounts range from 69 ppm to 246 ppm). Lab tests showed that the diesel contamination has been present for some time, and does not seem to be a recent or recurring problem.

Based on all information obtained and soil analyses performed, we can form the following conclusions:

Tank Abandonment

Dear Mr. Sullivan:

This is to inform you that at Gerosa Inc., located at 101 Lincoln Ave., Bronx, New York, we permanently abandoned 12-550 gallon diesel and 2-550 gallon gasoline tanks with a concrete slurry. The tanks had been properly purged of all product and vapors before being filled with concrete. The fills, vent lines, product and electrical lines were removed to below grade and sealed with concrete.

A soil analysis was performed, and upon receipt, a copy of the results will be forwarded to you.

Sincerely,

Re: Gerosa Inc.  
101 Lincoln Ave.  
Bronx, N.Y.

This is to certify that Gaservice Maintenance Corp., of 1616 Bronxdale Ave., Bronx, N.Y.

During the week of December 9, 1991, we permanently abandoned 12-550 gallon diesel and 2-550 gallon gasoline tanks, at the above-referenced location, with concrete slurry. The tanks had been properly purged of all product and de-fumed.

Four dispensers were removed and all product and electrical lines capped off and sealed below grade. The vents and fills were removed and sealed with concrete. All openings were sealed with concrete.

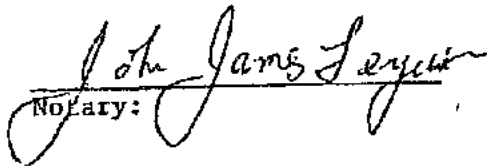

A soil boring analysis was performed, the results of which will be forwarded to the N.Y.S.D.E.C. and the owner.

Bronx, N.Y. 10454

This is to certify that Gaservice Maintenance Corp., of 1616 Bronxdale Ave., Bronx, N.Y.

On March 18, 1992, we excavated and partially uncovered 1-1000 gallon motor oil and 1-1000 gallon waste oil tanks. The tanks were cut open and vacuum-cleaned, and all oil removed was legally disposed of. The tanks were then permanently abandoned by filling with a concrete slurry mix.

The tank fills, vents, and all openings were also sealed with concrete.

A soil sample was performed, and the results will be forwarded to the owner.

**We Propose** hereby to furnish material and labor — complete in accordance with specifications below, for the sum of:

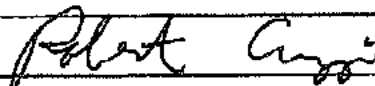

**Five Thousand dollars and .00 plus TAX** dollars (\$ **5000.00 + TAX** ).

Payment to be made as follows:

**50% Upon contract signing, 50% upon completion of work.**

All material is guaranteed to be as specified. All work to be completed in a workmanlike manner according to standard practices. Any alteration or deviation from specifications below involving extra costs will be executed only upon written orders, and will become an extra charge over and above the estimate. All agreements contingent upon strikes, accidents or delays beyond our control. Owner to carry fire, tornado and other necessary insurance. Our workers are fully covered by Workman's Compensation Insurance.

Authorized Signature

Note: This proposal may be withdrawn by us if not accepted within **30** days.

We hereby submit specifications and estimates for:

Dear Bob Gerosa:

This proposal includes the following work which needs to be performed to properly and legally abandon the 550 gallon motor oil and 550 gallon waste oil tanks, located at your facility:

- 1- Saw cut and remove two patches of concrete over waste oil and motor oil tanks.
- 2- Cut open both tanks, clean out and dispose of all tank bottoms.
- 3- Properly abandon both tanks with concrete slurry as per N.Y.S.D.E.C. requirements
- 4- Backfill excavated areas and re-pave concrete.
- 5- Perform soil analysis (1-boring) of tank area.

If you have any questions, please let us know. We will contact you to schedule a date to proceed with the project.

Sincerely,

  
 Robert Cuzzi  
 Operations Manager

Note: Any underground utilities, including electric, water, and sewer lines, are excluded from this contract.

### TAXABLE INVOICE

3/18/92

THE FOLLOWING WORK WAS PERFORMED TO PROPERLY & LEGALLY  
ABANDON 1-1,000 GALLON MOTOR OIL AND 1-1,000 GALLON  
WASTE OIL TANKS :

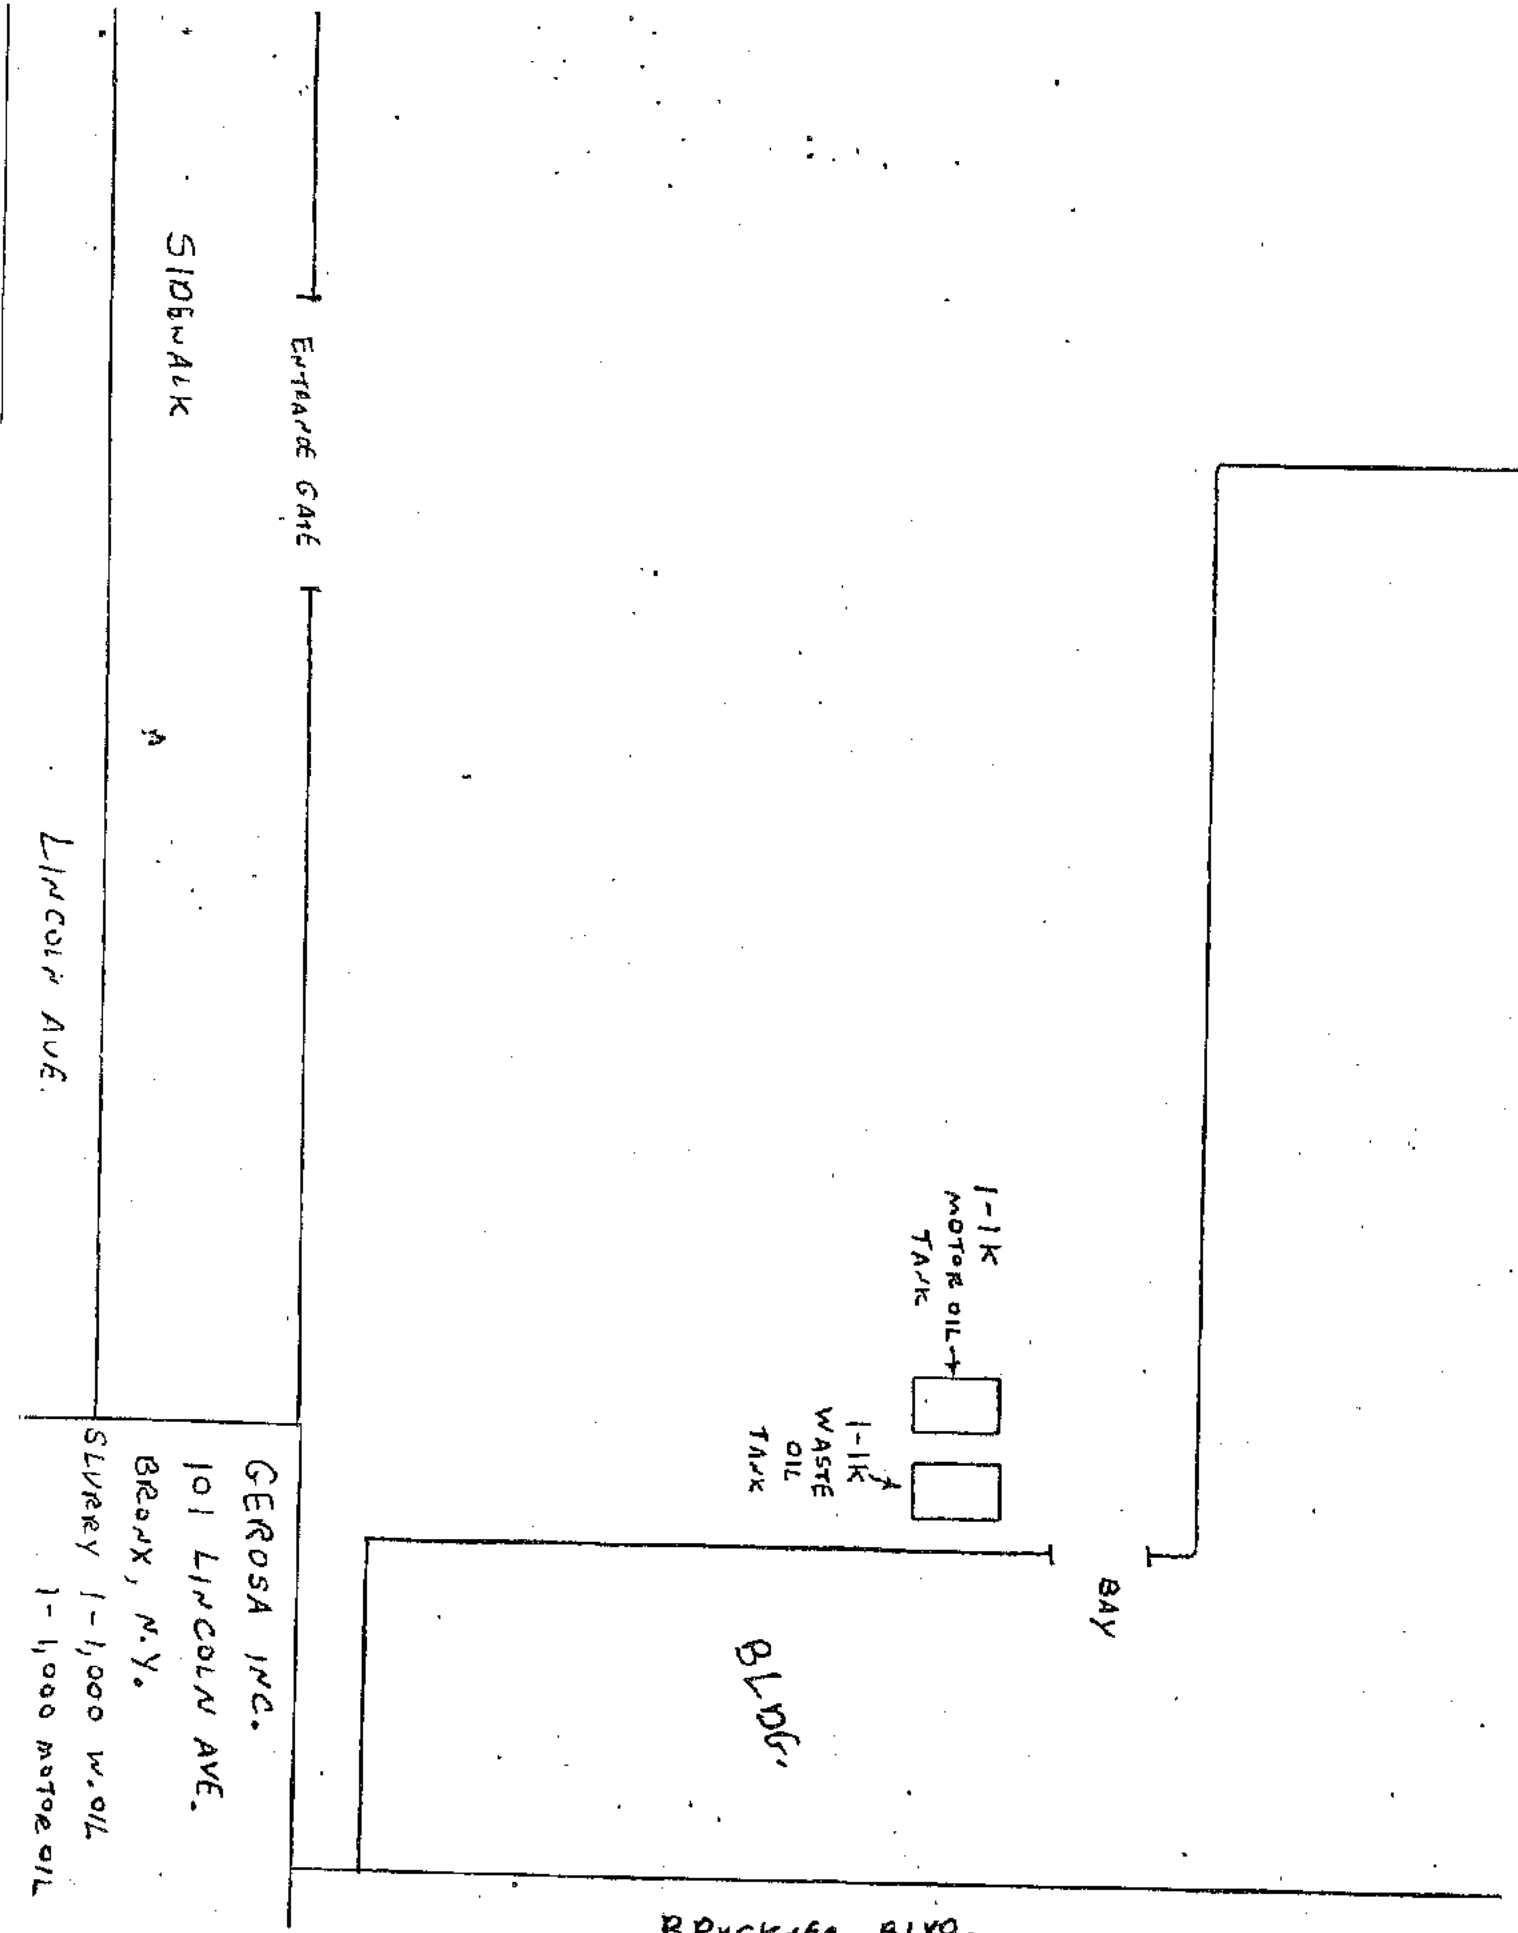

- EXCAVATED AND UNCOVERED 1-PATCH OVER EACH TANK
- CUT OPEN BOTH TANKS, HIRED VACUUM TRUCK TO CLEAN OUT BOTH
- PERMANENTLY ABANDONED BOTH TANKS WITH A CONCRETE SLURRY, AS PER N.Y.S. D.E.C. REQUIREMENTS
- BACKFILLED AND RE-PAVED EXCAVATED AREAS
- PERFORMED ONE SOIL ANALYSIS OF TANK AREA (RESULTS TO BE FURNISHED TO OWNER)

AGREED CONTRACT PRICE	5,000.00
EXTRA CONCRETE CHARGE DUE TO 2-TANKS BEING 1,000 GALLON EACH VERSUS 550 GALLONS. 5 YARDS @ \$ 80/YARD	400.00

VOUCHER No.	43064

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

# EXECUTIVE SUMMARY

NY RGA LF..... Recovered Government Archive Solid Waste Facilities List

## SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal RCRA generators list***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/11/2014 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

CON EDISON - GAS MAIN EXCAVATI	EAST 132ND ST. & PARK A	WNW 1/8 - 1/4 (0.247 mi.)	AC176	400

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/11/2014 has revealed that there are 4 RCRA-SQG sites within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/11/2014 has revealed that there are 15 RCRA-CESQG sites within approximately 0.25 miles of the target property.

### **State- and tribal - equivalent CERCLIS**

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 02/17/2014 has revealed that there are 4 NY SHWS sites within approximately 1 mile of the target property.

## EXECUTIVE SUMMARY

NY VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the NY VAPOR REOPENED list, as provided by EDR, and dated 02/17/2014 has revealed that there is 1 NY VAPOR REOPENED site within approximately 1 mile of the target property.

### **State and tribal landfill and/or solid waste disposal site lists**

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 12/12/2013 has revealed that there are 4 NY SWF/LF sites within approximately 0.5 miles of the target property.

### **State and tribal leaking storage tank lists**

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 02/17/2014 has revealed that there are 48 NY LTANKS sites within approximately 0.5 miles of the target property.

## EXECUTIVE SUMMARY

NY SPILLS 90: Spills 90 includes those spill and release records available exclusively from FirstSearch databases. Typically, they may include chemical, oil and/or hazardous substance spills recorded after 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 90.

A review of the NY SPILLS 90 list, as provided by EDR, and dated 12/14/2012 has revealed that there is 1 NY SPILLS 90 site within approximately 0.125 miles of the target property.

### **Other Ascertainable Records**

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/11/2014 has revealed that there are 30 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 12/31/2013 has revealed that there are 39 NY MANIFEST sites within approximately 0.25 miles of the target property.

### EDR HIGH RISK HISTORICAL RECORDS

#### ***EDR Exclusive Records***

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
CON EDISON - EAST 115TH ST. WO	EAST 114TH - EAST 116TH	S 1/2 - 1 (0.855 mi.)	237	602

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 20 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"e2mis no. 152860:~ 4 ounces of cable oil on a cement duct bank from an unidentified feeder cable damaged by a contractor. The feeder is pending identification and there is a broken sewer that released raw sewage into the manhole. The area is barricaded and an environmental tag # 34620 has been installed at the location.Cleanup pending further investigation.Emergency Supervisor Tony Tortora (39689) tested dead and cut out damaged piece of 3c800 PILC cable that was leaking. All dead feeder cable ends have been shorted and sealed. The affected area of cement duct was cleaned with simple green degreaser.Environmental tag # 34620 has been removed from the trench. 50-499 PCB check list completed by A. Tortora. Clean up is complete.

Remarks: 4 Oz. of material were spilled at open excavation site. Contractor damaged one of coned cables. Spilled onto a concrete area/ duck bank. Clean up is pending due de-energizing the feeder.

DEC Memo: Roux Associates called saying they are working this project.They seem to know what to do, so no CSL was sent.12/14/06 Rahman- William Holubowich is the contact person with Roux Assoc.They are currently preparing the Phase II report, will send to DEC along with Phase I shortly.01/18/07 Rahman-Phase II report by Roux Associates referenced the presence of a gasoline tank and pump back in 1950's.Currently, there are no active USTs present at the site.Roux Associate collected six soil samples and three ground water samples from the site.Soil and ground water samples from the loading dock area, where the potential gasoline UST was reportedly located,indicated the presence of VOCs associated with gasoline.GW sample one contained Ethylbenzene 23 ug/l, Xylenes 120ug/l, Benzene 4 ug/l.Soil samples SB-2 and SB-3 contained Xylenes @8300 ug/l and 46,000 ug/l rspectively.As per the report, there is no off site migration of the contaminants.Contamination is localized in loading dock area.Roux Associate recommended installation of three groundwater monitoring

wells and quarterly groundwater sampling and reporting for one year to evaluate groundwater quality. If a reduction in VOC is not identified, alternative approach will be evaluated to treat groundwater. 07/10/08 Final closure report from Roux Associates. Roux Associate injected ORC to enhance the biodegradation of the VOCs in the vicinity of GW-1, as per the previous RAP. The ORC slurry was injected via 12 temporary injections points. The lab result shows that in situ remediation has significantly reduced the concentrations of BTEX by an average of 92%. The final concentration of VOCs are: Benzene 0.69 ug/l, Toluene 34 ug/l, Ethylbenzene 220 ug/l, Xylenes 1,800 ug/l. Roux opinioned that ground water at that site does not pose any threat to public health or environment. Spill can be closed. (sr)

DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ENGELHARDT"6/19/98 e-mail from ERT Lukshides responding to previous spill update inquiry:Any cleanup measures? Oil source identified? when the Astoria tanker went to the location to conduct the clean up, originally reported as 2 pints unknown oil on 200 gallons of water, they found that a nearby fire hydrant was running and water from the hydrant was pouring in one side of the vault and back out the other side and that there was no oil in the vault. The tank truck pumped some of the water, but no oil found. A follow up on the 29th May (2 days later) reported still no oil in the hole. No source identified for original oil, but lab sequence is <1 ppm pcb.  
**Remarks:** caller states that on may 8th there was a 2 pint spill of unknown oil inside manhole. cleanup crew onsite today found that a hydrant was being flushed and flushed water out of manhole

 DEC Memo: e2mis no. 154542:Flush Mechanic Orlando Negron 18400, reports finding a leaking joint, a d-fault, where 10 ounces of dielectric fluid leaked and spilled in the manhole where it is contained. Cleanup pending deenergizing feeder in the vault. Lab Sequence Number: 04-05877-001: TOTAL PCB 11 ppm27-July-2004 22:40 hrs.Tanker removed 1000 gallons of liquid and there were no solids removed by the flush truck. The crew double washed and rinsed the manhole with 760 soap and water and the CFS tanker removed all liquids. There was no evidence of how the oil entered the manhole, the original joint that was suspected was not leaking and verified by the FOD. on site. The crew removed the Environmental tag # 30758. The underground are on location to repair all "D-Faults" in the manhole. CLEANUP COMPLETE.

A00 - Tank Internal Protection - None  
C00 - Pipe Location - No Piping  
F00 - Pipe External Protection - None  
D00 - Pipe Type - No Piping  
G00 - Tank Secondary Containment - None  
J00 - Dispenser - None  
H00 - Tank Leak Detection - None  
I00 - Overfill - None  
B00 - Tank External Protection - None

Tank Location: 6  
Tank Type: Stainless Steel Alloy  
Tank Status: In Service  
Pipe Model: Not reported  
Install Date: 08/29/2000  
Capacity Gallons: 5000  
Tightness Test Method: NN  
Date Test: Not reported  
Next Test Date: Not reported  
Date Tank Closed: Not reported  
Register: True  
Modified By: TRANSLAT  
Last Modified: 03/04/2004

Contact Phone: (212) 289-0006  
DEC Memo: Continuation of an ongoing problem assigned to Sawyer. Minor spill to cement area. Photos will be submitted to DEC. Minor spill case associated with Spill #0404341 Case has been switched from Sawyer to Tipple 12/16/05 - Raphael Ketani. Roni Werman called and said that the oil from this spill has been cleaned up and containerized in 7 drums. They are waiting for the contractor to haul the drums away. Dan Garcia of Parson Brinkerhoff is the on site consultant for managing the spill and other housekeeping issues. He said that the spill has not impacted drains, sewers, or the environment. He said he will get me a report stating this via FAX. 1/4/06 - Raphael Ketani. Jerry Hickson of Parsons-Brinkerhoff ((212) 289-0006) called to say that everything has been drummed up, except an area with foam which forms a berm containing a little hydraulic fluid. He said this will be cleaned up soon and that the DEC will get the closure report in 2 weeks. 2/1/06 - Raphael Ketani. Mr. Hickson called to say they dug up the soil and containerized 48 drums of contaminated soil. He said that all of the contamination was from the servicing and fueling of heavy equipment. Mr. Hickson added that the soil had been on concrete and Severn Trent put down absorbent on the concrete to soak up any residues that were left. Mr. Hickson said that DEC should receive the cleanup report with manifests and all other documentation soon. 2/23/06 - Raphael Ketani. I received the closure report from Parsons-Brinkerhoff Construction Services dated 2/14/06 for the spill case. I reviewed it today and found that it addresses the contamination/spills and their cleanup. Therefore, I am closing the case. 3/3/06 - Raphael Ketani. I received a closure report dated 2/23/06 for the associated spill case #0404341.

Remarks: SOME LEAKAGE IN STAGE AREA FOR THE BRIDGE PROJECT: IN PROCESS OF CLEANING UP AND PUTTING IN DRUMS AND WILL SEND OUT:

Program: BCP  
 Site Code: 410705

**Actual:**  
**17 ft.**

Site Description: LOCATION: The site is located in an urban industrialized section of the south Bronx at the intersection of 3rd Avenue and the Major Deegan Expressway (I-87) between 135th Street and 136th Street. It is located approximately 1000 feet east of the Harlem River. The property consists of Block 2320, Lot 11 of tax map 20902, and is 0.214 acres in size. SITE FEATURES: The is currently vacant with

MAP FINDINGS

**2477 THIRD AVENUE PROPERTY (Continued)**

**S109580082**

remnants of paved areas remaining from a former gasoline station. CURRENT ZONING AND LAND USE(S): The site is zoned commercial but is currently vacant. PAST USE OF THE SITE: The site was a gasoline filling station from the 1950s until approximately 1989. Releases of petroleum products to the environment resulted in the site contamination. SITE GEOLOGY AND HYDROGEOLOGY: The site is approximately 15 feet above mean sea level. The nearest surface water body is the Harlem River, approximately 1000 west of the site. Groundwater was encountered from 7 to 10 feet below ground surface and was found to flow in a south-southwesterly direction towards the Harlem River.

Env Problem: NATURE AND EXTENT OF CONTAMINATION: Based on investigations conducted to date, the primary contaminants of concern in site soils and groundwater are petroleum related compounds. On-site soil samples exceeded Standards, Criteria, and Guidance (SCG) levels for VOCs at one of 14 samples taken in a 2010 investigation. Soil samples were taken from 2.5 to 149 feet below surface. A sample at MW-105 at 9.5 feet below surface included: 1,2,4-trimethylbenzene (up to 480 mg/kg), 1,3,5-trimethylbenzene (up to 110 mg/kg), ethylbenzene (up to 150 mg/kg), naphthalene (up to 17 mg/kg), n-butylbenzene (up to 37 mg/kg), propylbenzene (up to 81 mg/kg), o-xylene (up to 170 mg/kg), p/m-xylene (up to 700 mg/kg), and toluene (up to 12 mg/kg). All of the contaminants at this sample location exceeded the unrestricted use Soil Cleanup Objectives (SCO) and several exceed the commercial SCO. No free product was found. Seven SVOCs were detected in soils at levels exceeding the SCO for unrestricted use. The highest level of soil contamination was found at 9.5 feet below ground surface, however levels met the SCOs near the surface. On-site groundwater standards were exceeded for gasoline related VOCs including: 1,2,4-trimethylbenzene (up to 3,300 ug/L), 1,3,5-trimethylbenzene (up to 820 ug/L), benzene (up to 72 ug/L), ethylbenzene (up to 920 ug/L), toluene (up to 770 ug/L), o-xylene (up to 620 ug/L), m/p-xylene (up to 2,300 ug/L), and MTBE (46 ug/L). These levels of contamination were found in wells in the southern half of the site and wells in the northern part of the site were found to be non-detectable for any contaminants.

Health Problem: Since this site is covered with concrete and asphalt, people will not come into contact with the contamination unless they dig below the surface. People are not drinking the contaminated groundwater since the area is served by a public water supply that is not contaminated by the site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings is referred to as soil vapor intrusion. Because there is no on-site building, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site construction. In addition, the potential exists for off-site migration of site-related contaminants in soil vapor.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "VOUGHT" See also spill # 9306863 which has been closed as duplicate. JK.2/6/06 - Obligado - Review baseline assessment report, submitted by Delta, 10/2/02. Site was an active Gaseteria at time of assessment with 3 4000 gallon gasoline USTs and 1 1000 gallon Diesel UST. Nearest surface body is Harlem river, 1200 ft southwest. 2 schools located 1000 ft east/southeast. Ground water located at 8.6 to 9.3 ft bgs and likely flows southwesterly. Soil is sand down to 15 ft bgs. Soil results only showed MTBE impacts at the 6-8 ft interval. Ground water showed 16,860 BTEX in MW2, 443 BTEX in MW1. Soil is sand down to 15 ft bgs. 6/9/06 - Obligado - Drilling pushed to 3Q06.7/19/06 - Obligado - Meeting with ASR, Gaseteria, DEC. This site will require delineation and possibly remediation. Will be included on the corrective action schedule. 9/12/06 - Emailed Gaseteria Multi site stipulation agreement on 9/8/06. Sent original on 9/12/06. Due date for investigation workplan is 4/1/07. 6/1/07 - Obligado - Phone conversation with Muller. Pushed workplan due date to 8/1/07. 9/25/07 - Obligado - Spoke to Steve Muller. He said the workplan is complete and he will submit it today. 9/26/07 - Obligado - Received the investigation work plan. 10/26/07 - Obligado - Review investigation workplan. The workplan proposes the installation of 4, 2" monitoring wells. Water anticipated at 8.5 - 9 ft bgs. Soil and ground water samples for 8260/8270 will be collected. All wells will be surveyed. An Investigation Summary Report will be submitted within 60 days. 1/28/08 - Obligado - I reviewed the ISR, dated 12/24/07. 4 borings/monitoring wells were installed at the site. GW impacts were found at 3 of 4 wells. Soil impacts found at 2 of 4 locations. Max soil and ground water impacts found at MW1, with 191,000 ug/m3 BTEX in soil and 7500 BTEX in Ground water. Additional delineation is required. Several data gaps on site and delineation need off-site. Sent email to steve muller require workplan for additional investigation both on and off-site. Also requested information about tanks and soil endpoint sampling as I could not find any UST Closure report. Steve in the email coverletter requested postponement of off-site delienation due to difficulty installing off-site wells downgradient due to Major Deegan and necessity for a sensitive receptor survey. I emailed Steve that Delta already did a receptor survey (above) and they should insall wells across the Deegan if necessary. 4/23/08 - Obligado - Site Meeting with Steve Muller to scope out new well locations. We discovered there were many preexisting montitoring wells at the site. Also the USTs were still in place, contrary to PBS registration, which lists the USTs as closed/removed. 4/25/08 - Obligado - Based on the above I sent an email to STEve Muller, with CC to Gaseteria requiring submission of new workplan within 30 days which includes the following: 1) An updated site plan showing all existing and newly installed monitoring wells, and any pre-existing remedial systems. 2) An updated ground

water contour map based on liquid level gauging data from all new and existing monitoring wells. 3) An updated ground water plume map based on analytical results from ground water samples collected from all new and existing monitoring wells. Prior to sampling all monitoring wells should be properly developed. The inside of all manhole covers should be cleaned of debris. 4) A new Proposed Monitoring Well Location Map based on all the newly acquired data. 5) Updated UST information. What is the status of these tanks? Are they empty, full, or abandoned in place? The PBS registration for the site must also be updated to reflect true site conditions. 5/28/08 - Obligado - Reviewed a revised workplan with updated plume map. 4 historic wells that contained water were added to the site plan and gauged. They were not sampled because there was not enough water in the well. The plan proposes 4 additional wells, 2 onsite and 2 off-site. The plan also proposes to investigate the tanks and update PBS registration. I sent an email approval to Steve Muller and Gaseteria. 8/20/08 - Obligado - Meeting with ASR, Gaseteria, DEC. Site delineation is ongoing. Gw Sampling scheduled for August 25, 2008. RIR due by end of September 2008. 10/8/08 - Obligado - Review RIR. Extremely high soil concentrations in downgradient well locations. MW7 (farthest off-site across street below Deegan Overpass) had over 3,000,000 ug/u3 total VOCs and 1000 ug/L total VOCs. Sent email to Steve requiring additional delineation and request site meeting to look at potential locations. Site meeting 10/16/08 10/16/08 - Obligado - On-site meeting with Steve Muller. Potential developers were there as well. We looked at some potential boring locations. A Potential developer was on-site as well. 10/20/08 - Obligado - Reviewed IWP. Proposes 4 to 6 additional boring locations. I approved the plan. Emailed approval letter to Steve. Report due in 60 days. 12/30/08 - Obligado - RIR submitted by Steve Muller for Gaseteria. 5/10/09 - Obligado - After review of the report, sent disapproval letter to Gaseteria. Required revisions to the tables and figures, addition of soil boring logs and analytical results. 6/10/09 - Obligado - RIR re-submitted by Tomasello. 10/5/09 - Obligado - Completed review of RIR. 4 additional wells were installed. 2 met with refusal under the Major Deegan overpass probably due to footing structures. The ground water plume has been adequately delineated based on the site constraints. I sent an approval letter for the RIR. 10/13/09 - Obligado - Meeting with Gaseteria, DEC, Reliant Consulting, and JCBroderick. This site was recently sold and the new owners were accepted into the Brownfield Cleanup Program (BCP). The new owners did not yet sign the BCP agreement. DEC Legal is sending them a "sign or get rejected from the program" letter. AKRF are the new owner's consultants. DEC approved the Final RIR. DEC is requiring that GOC continue the MM & QS of the off-site wells. 4/29/2013 - Project manager changed to Keating in Central Office.

Remarks:

Contaminated soil and groundwater found. Data reported to DEC by Delta despite knowledge of Gaseteria since 8/5/2002.

Used oil transfer facility: No  
Used oil transporter: No

Hazardous Waste Summary:

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018  
Waste name: BENZENE

Violation Status: No violations found

Hazardous Waste Summary:

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002  
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D005  
Waste name: BARIUM

Waste code: D006  
Waste name: CADMIUM

Waste code: D007

**FINDS:**

Registry ID: 110007985699

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Number: 011  
Tank ID: 67417  
Tank Status: Closed - Removed  
Material Name: Closed - Removed  
Capacity Gallons: 550  
Install Date: Not reported  
Date Tank Closed: 10/01/2003  
Registered: True  
Tank Location: Underground  
Tank Type: Steel/carbon steel  
Material Code: 0009  
Common Name of Substance: Gasoline

Tightness Test Method: NN  
Date Test: Not reported  
Next Test Date: Not reported  
Pipe Model: Not reported  
Modified By: TRANSLAT  
Last Modified: 03/04/2004

Equipment Records:

B01 - Tank External Protection - Painted/Asphalt Coating  
F00 - Pipe External Protection - None  
J00 - Dispenser - None  
I00 - Overfill - None  
A00 - Tank Internal Protection - None

DEC Memo:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "KOLLEENY" TRANSFERRED FROM Y.KRIMGOLD TO KOLLEENY TO I.ISLAM5/3/05- The site's soil & GW are currently under remediation by LiRo Engineers by injecting bio-nutrient(through 24 wells) and Iso-Gen Oxygen (through 8 wells). Reviewed the quarterly site monitoring report (Nov./04-Jan./05). Initially, vacuum track was also used to remove Free Product from wells which was followed by bio-nutrient injection. Relative to baseline sampling data, significant improvement in GW quality has been achieved so far in almost all site wells. Installation of ORC socks has been recommended via email for the wells showing persistently high level of Total VOC concentration. Soil investigation is done annually and groundwater quarterly. All wells are found free from Free Product. Installed the quarterly report in the eDoc Folder. - 11/29/05- Reviewed the Feb.- May/05 monitoring report. Overall GW contamination improved compared to the baseline sampling conducted in 2003. Recent data exhibit low hetero-trophic bacteria count in some of the wells even though DO and other biotreatment parameters are reasonable. The next soil sampling is planned for October 2005. Oxygen delivery system running and site monitoring will continue. Installed the report in the eDoc folder.- 11/1/29/05- Reviewed the Jun-Aug/05 site monitoring report dt. Sept. 30/05. The final injection of bio-nutrient occurred in April 21/04. In addition, oxygen supplement through delivery wells started with eight delivery wells have now been reduced to four wells down the road due to failure of the Iso-Gen well controllers. ORC socks were also installed in wells LW-9 and LW-19 in Jan/05 and wells LW-5 and LW-15 in May/05. No free product has been observed recently. August/05 GW sampling results exhibit mixed results as TVOCs concentrations increased at some wells(particularly at LW-10) while decreased at others. But overall significant improvement is observed compared to the baseline samplings conducted in 2003. The consultant LiRo is supposed to resample well LW-10 to evaluate the sudden discrepancy. The proposed upcoming soil sampling plan by LiRo is hereby approved with two additional borings to be advanced adjacent to LW-14 and LW-19. Filed the report in the EDoc folder.- 03/08/06: this spill transferred from I. Islam to Q. Abidi.4/19/06: Reviewed Quarterly Monitoring report Sept. 2005 - Dec. 2005. Six groundwater samples were taken on December 28, 2005 during monitoring. Analytical data show four groundwater samples are still contaminated. Free product was not observed during monitoring. Soil samples were taken on December 20, 2005. Two new soil borings were made, LW-9 and LW-11 data shows TVOCs are very high. Only two of five planned soil borings were completed.. LiRo recommends postponing completion of the other soil borings for about six months. They also recommend continuing oxygen delivery system and monitoring at the site. Sent an e-mail to DDC and consultants on 4/19/06 approving these recommendations, and suggesting that the new CM (URS) review all data and evaluate the site to recommend a future course of action. - QA08/18/06: Transferred to S.Kraszewski. According to the URS Bi-monthly update report on June 9, 2006 URS collected GW samples. VOC analysis revealed no VOCs above GW quality criteria except in LW-09. - SK10/27/06 Spill case transferred from S. Kraszewski to J. Maisonave. - JAM12/8/06 Reviewed the Revised Remedial Strategy Report submitted by URS dated November 17, 2006. Site Summary: On Jan. 27, 2003 the DEC approved a remedial strategy by Liro to inject a bio-nutrient slurry and to install the Iso-Gen Oxygen Delivery System (uses a low capacity pump and

Map ID  
Direction  
Distance  
Elevation

**MANHATTAN EAST 10 DOS -DDC (Continued)**

**S104510350**

electrolytic cell to dissociate water into hydrogen and oxygen) on eight wells. In Jan 2005 the number of oxygen delivery wells was reduced to four due to failure of the well controllers. Consequently, Liro installed ORC socs in the other four wells between Jan and May 2005. The bio-nutrient slurry was injected into twenty-four injection wells between Nov 2003 and Apr 2004. URS was retained as the site manager in Mar 2006 and provided this revised remedial strategy because the manufacturer of the Iso-Gen Oxygen Delivery System had gone out of business and continued operation and maintenance of the system requires monthly replacement of the electrolytic cells. URS proposes implementing chemical oxidation followed by enhanced bioremediation if warranted in lieu of the currently approved remedial strategy. RegenOx will be injected in 10 wells at a rate of 200lbs per injection well with injections occurring once a month for 4 months. Additionally, URS proposes advancing 4 soil borings near the previously detected vadose zone soil contamination at monitoring well LW-06 to determine if remedial measures are required. Report uploaded to eDocs. -JAM1/10/07 Meeting with DDC and URS. Verbally approved Revised Remedial Strategy. - JAM1/19/07 Reviewed UST Closure Report submitted by James McCullah Co., Inc. dated Nov. 2006. DDC contracted to remove two 2,000-gallon diesel oil tanks and one 1,000-gallon Gasoling tank. The tanks were removed on July 11, 2006. All three tanks were steel, five-foot diameter, double-walled tanks buried approx. four feet below grade. Tanks were found to be in good condition. All piping was also removed. Five end-point soil samples were collected from between 7'-12' below grade and analyzed for VOCs and SVOCs. Groundwater was not encountered before reaching bedrock at 11 feet below grade. No signs of contamination were observed, through olfactory and PID screening. Some VOCs were detected however, no detections were above TAGM. SVOCs in sample 1 were the only detections above TAGM. Report uploaded to eDocs. - JAM8/17/07 Reviewed Soil Sampling Results Report dated July 31, 2007 submitted by URS. On June 12, 2007, URS advanced four soil borings near monitoring well LW-06. Two soil samples were collected from each and the analytical results showed no VOCs detected above TAGM. On May 1, and 2, 2007, URS collected groundwater samples from 16 monitoring wells. Five wells were inaccessible or dry and could not be sampled. VOCs were non-detectable in eight wells. VOC exceedences were detected in wells with concentrations ranging from 16ppb in well LW-06 to 2,018ppb in well LW-10. Elevated concentrations persist in wells LW-10 and LW-20. Conclusions: Soil analytical show that no VOCs exceed TAGM. However, elevated PID readings were detected during the screening of soil samples, which contradict sample results. URS attributes this to the hot humid weather, which may have affected the PID readings. Petroleum odors were not observed from the soil. Minor SVOCs exceeded TAGM, attributed to urban fill. URS proposes chemical oxidation to address dissolved phase contamination observed. URS will prepare a bid package and perform this work. I expect a remedial summary report when work is completed. Report uploaded to eDocs. - JAM11/18/08 Reviewed System Performance Report for Monitoring Period July through September 2008 submitted by URS dated October 24, 2008. Franklin was contracted by URS to install the injections wells and on August 1, August 29 and October 10, 2008 completed three rounds of RegenOx injections. Thirty-three injection wells were installed and in each of the three injection rounds, 140lbs of RegenOx and 100 gallons of water was applied in each well. URS collected groundwater samples monthly between July and September, 2008. URS states that

groundwater samples show improvement after the RegenOx injection and recommends continuing groundwater monitoring monthly while the injections are still occurring. URS anticipates Franklin will perform the next injections in December 2008. The report is uploaded to eDocs. - JAM10/19/09 Reviewed the System Performance Report for Monitoring Period October through December 2008 submitted by URS dated February 18, 2009. On December 18, 2008, URS collected groundwater samples from eight wells in the monitoring program. Analytical results showed total VOC concentrations ranging from 43ppb in LW-19 to 4,502ppb in LW-14. Compared with results from the previous sampling event in September 2008, three wells showed decreased total VOCs and four wells showed increased total VOCs. URS states, "After three rounds of RegenOx injections, the groundwater analytical data show fluctuating contaminant concentrations... Franklin is expected to perform a fourth round of injections in March 2009. URS will continue to monitor groundwater quality." This report is uploaded to eDocs. - JAM11/18/09 Reviewed System Performance Report through 3rd Quarter 2009 submitted by URS dated October 6, 2009. The report summarizes four rounds of RegenOx injections and 2 rounds of groundwater sampling, which occurred after the injections. The four rounds of injections occurred on August 1, August 28, October 14 of 2008 and February 27, 2009. On June 10, and September 17, 2009, URS collected groundwater samples from 12 of the 13 monitoring wells. Well LW-12 was inadvertently missed in June and well LW-20 was dry in September. NO VOCs were detected above GWQS in wells LW-02, LW-04, LW-07, LW-12, and MW-01. The remaining wells had total VOC concentrations ranging from 166ppb in LW-19 to 7,291ppb in LW-14. URS states that the "rebound" effect is attributed to the desorption of contaminants from soils in the northeast portion of the site. This corresponds to the conclusion presented in the ISRP by LIRO submitted in 2002, which noted contamination in the northeast portion of the site that could be attributed to the heating oil system or an unknown source. URS will perform soil sampling in the northeast portion of the site in November of 2009. No RegenOx injections are scheduled. URS is also considering using a stronger oxidant like sodium persulfate. The report is uploaded to eDocs. - JAM6/9/10 Reviewed the System Performance Report through 4th Quarter 2009 submitted by URS dated February 5, 2010. URS conducted groundwater sampling on December 16 and 17, 2009 and results showed VOC concentrations ranging from 100 ppb in LW-10 to 2,938 ppb in LW-14. URS has performed 4 rounds of ChemOx injections and the results of groundwater monitoring after injections initially showed improvement. According to URS, it appears rebound is occurring in the northeast portion and the source may be from contamination adsorbed on the soil in the smear-zone dissolving into the groundwater. In November 2009, URS performed a limited soil investigation in the northeast portion of the site and found contamination in 5 soil samples collected just above and below the water table in that area (groundwater is at 10ft below grade). URS proposes additional RegenOx injections into existing injection wells to target two areas; the area near wells LW-3 and LW-6, and the other area near borings SB-08, SB-09, SB-10, and SB-11. They also propose installing ORC socks in wells BN-03 and BN-08, located along the sidewalk along 131st Street. Report uploaded to eDocs. I called and left a message with Kevin Shanahan today to discuss the status of the out of service fuel oil tank in the northeast portion of the site. - JAM6/10/10 Spoke to Kevin Shanahan at URS. I searched the PBS Registration (PBS #

**MANHATTAN EAST 10 DOS -DDC (Continued)**

**S104510350**

2-455849) and found that a 5,000-gallon #2 Fuel Oil UST is listed as "In Service." I asked Kevin to have the tank inspected and if it is in fact out of service, then the tank should be closed and the PBS registration updated. Perhaps the tank should be removed as it may be a source for contamination found in soil and groundwater. If so then contaminated soil should be excavated and the source removed prior to implementing another round of ChemOx injections. He agreed and will get back to me after URS inspects the tank. The latest groundwater sampling report will be issued and when Kevin gets back to me after the tank inspection, I will write a response with DEC's requirements to DDC. - JAM10/25/10 In the quarterly status update meeting with the DDC and URS on 10/19/10, URS said that the results from the site reconnaissance was submitted in the report dated September 30th. URS will propose additional ChemOx injections to treat residual dissolved phase contamination under a separate letter. - JAM11/05/2010: This spill case was transferred to A. Doronova. - AD02/17/2011: Had a quarterly meeting with DDC and URS. Discussed the proposed 5th round of RegenOx injections. Since the previous rounds did not indicate significant improvements in GW quality, asked URS to do USTs inventarization and find out if it is feasible to remove closed-in-place USTs which are acting as a continuous sources of contamination according to a GW contamination plume map. Put RegenOx injection proposal on hold, till the requested info will be submitted to DEC. AD02/18/2011: Received a Remediation Performance Report, submitted by URS Corporation (URS) and dated February 15, 2011. The report presents groundwater sampling results and states that some of the site's monitoring wells showed elevated levels of VOCs and that one well (LW-20) exhibited free product during the last monitoring round. Based on the data, URS recommends an additional round of RegenOx injections in two areas of the site. Will wait for USTs info before making decision. AD03/07/2011: Received a call from K. Shanahan of URS regarding feasibility of removal of USTs in question from the site. He said that there are some issues with their removal. Told him that then these areas should be investigated further and long-term remediation will be required. Also he insisted on implementation of RegenOx injections since it was already approved by DDC and they have contractor ready to perform it. Told him that previous rounds of injection did not show significant improvement, and that they should consider different compound for injections. I said that they can submit their proposal for RegenOx application for my review. Later received an e-mail from K. Shanahan saying: "Ainura, Thank you for taking some time this morning to discuss the latest developments for this site. Here is a basic summary of our discussions: 1. URS informed DEC that removal of the closed-in-place 4,000-gallon heating oil UST is not considered feasible due to structural concerns of the adjacent elevator. DEC indicated that if this tank cannot be removed, it may result in a long-term remediation project since any source areas associated with this tank would remain. 2. URS informed DEC that removal of the six closed-in-place 550-gallon USTs is complicated by the presence of the new diesel and gasoline supply piping and electrical conduit running directly over the closed tanks. DEC requested that URS consider protecting the lines and removing the tanks. If the lines are damaged during construction, they could be repaired. URS preliminarily agreed and will arrange for the UST removal in this area. 3. URS requested that DEC approve the limited Regenox Injection Plan URS prepared in December 2010 (see attached). The design is complete and the

EPA ID Number

**MANHATTAN EAST 10 DOS -DDC (Continued)**

**S104510350**

contractor has been procured for this work. DEC reiterated that they did not feel the four Regenox applications have resulted in significant VOC reductions but they would consider the request to complete this addition work. DEC also suggested that URS look at alternative bioremediation technologies for this site. In summary, URS will have the six closed-in-place 550-gallon USTs removed and DEC will review the attached plan for limited Regenox Injections. If possible DEC will provide URS an approval to move forward. Thanks, Kevin J. Shanahan Project Manager URS Corporation 77 Goodell Street Buffalo, New York 14203716-923-1215

Reviewed the attached scope of work where URS proposes implement additional round of RegenOx injections in two areas of the site, using ten existing injection wells. Free product will be removed from the affected well (LW-20) before beginning the injections. A summary report with conclusions and recommendations will be provided to DEC.

AD03/10/2011: Discussed this proposal with J. Kolleeny of DEC.  
AD03/11/2011: Issued and sent an approval letter with the following comment: "If the RegenOx application is not effective in reducing VOC levels, an alternative remediation approach should be proposed for the site." DL the letter to eDocs.  
AD07/31/2011: Received a 1st quarter monitoring report for 2011. DI to eDocs. Will review.  
AD08/25/2011: received an e-mail from Kevin saying: "Ainura, Closed in-place USTs are being removed today, tomorrow and possibly on Monday depending upon utility complications. Kevin J. Shanahan Project Manager URS Corporation 77 Goodell Street Buffalo, New York 14203716-923-1215"

AD08/19/2011: Reviewed the report. It states that the most recent remedial action conducted at the Manhattan East 10 facility involved using RegenOx™ injections to treat dissolved phase groundwater contamination. Four rounds of injections were completed between August 1, 2008 and February 27, 2009. After the four rounds of RegenOx™ injections, the groundwater analytical data continue to show fluctuating contaminant concentrations. The groundwater sampling for the first quarter of 2011 was completed on March 7 and 8, 2011. The samples were analyzed for petroleum related volatile organic compounds (VOCs) using USEPA Method SW 8260. Samples were collected from wells LW-02, LW-03, LW-04, LW-06, LW-07, LW-09 (IW-22), LW-10 (IW-21), LW-12, LW-14, LW-15, LW-19 and MW-01. LW-20 was not sampled because product was detected in the well. The measured quantity of product in the well was 0.03 feet. The analytical results showed no VOCs exceeded the NYSDEC GQS in wells LW-02, LW-04, LW-06, LW-07, LW-12, and MW-01. The remaining six wells exhibited several VOCs above the NYSDEC Groundwater Quality Criteria, with total VOC concentrations ranging from 96 ppb in LW-09 to 3,510 ppb in LW-14. The most recent groundwater results support URS' recommendations for additional RegenOx™ injections and the installation of ORCr socks as outlined in previous quarterly monitoring reports. URS anticipates that removal of the six USTs will be completed in September 2011. Upon approval from NYSDEC to inject additional RegenOx™ in accordance with the December 2010 submittal, URS will proceed with additional RegenOx™ injections to address residual groundwater contamination in accordance with the Scope of Work already provided to NYSDEC. URS will continue groundwater monitoring on a quarterly basis. Since product has been detected in LW-20 for three consecutive quarters, a petroleum absorbent sock will be installed in this well during the next sampling event. - URS' recommendations for additional RegenOx™ injections and the installation of ORCr socks were approved by DEC back in March of 2011. AD12/01/2011: Received 2nd quarter 2011

**MANHATTAN EAST 10 DOS -DDC (Continued)**

**S104510350**

monitoring report. DL to eDocs. Will review. AD01/17/2012: Reviewed the report. It states that on August 26, 2011, Franklin removed the five 550-gallon USTs, along with the tank encasement and fill material. Since the removal of the 350-gallon UST may have posed a threat to the structural integrity of the building above it, it was not removed. No environmental impacts were noted during the UST removal work. Analytical results for soil samples collected following removal of these tanks will be submitted in the next quarterly report. Following the removal of the five USTs, URS is making plans to implement the next round of RegenOx™ injections. The injection work plan proposes that 60 pounds of oxidant (Part A), 30 pounds of activator (Part B), and 120 gallons of water will be injected into wells IW-02, IW-03, IW-04, IW-07, and IW-10, all located in the area where the tanks were removed. In the more contaminated northeast area of the site, the work plan proposes injecting 120 pounds of oxidant, 60 pounds of activator, and 240 gallons of water into injection wells IW-06, IW-29, IW-30, IW-31, IW-32, and IW-33. The groundwater sampling for the second quarter of 2011 was completed on June 13 and 14, 2011. All wells were sampled except for LW-20 since product was found in this well at a thickness of 0.01 feet. The depth to groundwater at the site ranges from approximately 7 to 11' bgs. The predominant flow direction is to the east and northeast. The analytical results showed no VOCs exceeded the NYSDEC Standards in wells LW-02, LW-04, LW-06, LW-12, and MW-01. In well LW-07, MTBE was the only VOC detected, at 17 ppb. The remaining six wells exhibited several VOCs above the NYSDEC Groundwater Quality Criteria, with TVOCs ranging from 31 ppb in LW-09 to 3,884 ppb in LW-14. After four rounds of RegenOx™ injections, the groundwater analytical data showed fluctuating contaminant concentrations. URS concludes that future RegenOx™ treatments would address the higher level contamination that remains in the downgradient area, especially given the fact that the 4,000-gallon closed in-place heating oil tank and any associated contaminated soil cannot be removed via excavation. URS will continue to perform groundwater monitoring on a quarterly basis. The most recent groundwater results support URS' recommendations for additional RegenOx™ injections and the installation of ORCr socks as outlined in previous quarterly monitoring reports. URS is preparing to conduct the next round of injections in accordance with the December 2010 scope of work. No DEC response or approval is needed. AD02/08/2012: Received a third quarter 2011 monitoring report. DL to eDocs. Will review. AD03/13/2012: Reviewed the report. It states that groundwater sampling for the third quarter of 2011 was completed on September 7 and 8, 2011. All wells were sampled except for LW-03 because of an obstruction in the well, and LW-20 since product was found in this well at a thickness of 0.01 feet. The obstruction in well LW-03 has since been removed. The depth to groundwater at the site ranges from approximately 7 to 11' bgs. The predominant flow direction is to the east and northeast. The depth to bedrock at this site ranges from 9 feet in the southern part of the site to more than 20 feet in the west-central and northern portions of the site. Minor quantities of product have been detected in monitoring well LW-20 for the past several groundwater sampling events. During the June 2011 event, a petroleum absorbent sock was installed in this well to collect product. During the September 2011 site visit, the sock was replaced. URS will continue to monitor product and replace the absorbent sock in this well as necessary. The analytical result from this sampling event showed no exceedance of any NYSDEC Standards for VOCs in wells

**S104510350**

LW-02, LW-04, LW-07, LW-12, and MW-01. There were no VOCs detected in samples collected from wells LW-02, LW-07, and MW-01; in LW-04 and LW-12 only MTBE was detected. In well LW-06, n-propyl benzene was the only VOC that exceeded the standards at 6 ppb as compared to a criterion of 5 ppb. The remaining five wells exhibited two or more VOCs above the standards, with TVOCs ranging from 14 ppb in LW-09 to 2,332 ppb in LW-14. URS concludes that VOC-impacted groundwater and saturated soils remain in the eastern half of the site. URS recommends installation of five additional groundwater monitoring wells and analysis of soil and groundwater samples in this area to better delineate the extent of soil, groundwater and free product impacts. Based on the groundwater data obtained over the past few years, URS sure that the remediation by chemical oxidation has had a positive effect. Therefore, URS intends to implement additional RegenOx injections once the new wells have been installed and the extent of the VOC impacts has been refined. Summary: The report presents groundwater sampling results and states that significant groundwater impacts remain in the eastern part of the site. Based on the data, URS recommends further delineation of the groundwater contaminant plume via installation of five monitoring wells, with collection of soil and groundwater samples, followed by an additional application of chemical oxidant in this area of the site. A summary report with conclusions and recommendations will be provided to DEC. To issue an approval letter. AD03/14/2012: Issued and sent the approval letter to A. Samani of DDC with the following comment: " If the additional RegenOx application is not effective in reducing VOC levels, an alternative remedial approach should be proposed for the site." DL pdf copy of the letter to eDocs. AD06/13/2012: Received 4th Quarter 2011 and 1st Quarter 2012 Monitoring Reports. DL pdf copy to eDocs. Will review. AD07/26/2012: Reviewed the report. It states that the 13 wells are currently included in the quarterly groundwater monitoring program: LW-02, LW-03, LW-04, LW-06, LW-07, LW-09 (IW-22), LW-10 (IW-21), LW-12, LW-14, LW-15, LW-19, LW-20, and MW-01. Groundwater sampling for the fourth quarter of 2011 was completed on December 12, 2011. The groundwater sampling for the first quarter of 2012 was completed on March 5 and 6, 2012. During both sampling events, all wells were sampled except for LW-20, which currently contains a petroleum-absorbent sock and typically contains free product. For the first quarter 2012, the analytical results showed that no VOCs exceeded the Standards in 5 wells: LW-02, LW-04, LW-07, LW-12 and MW-01. In well LW-06, only n-propylbenzene was detected above criteria at 8ppb as compared to a criterion of 5 ppb. The remaining 6 wells: (LW-03, LW-09, LW-10, LW-14, LW-15 and LW-19) exhibited several VOCs above the NYSDEC Groundwater Quality Criteria; the most contaminated well was LW-14, with TVOCs of 3,299 ppb. The remaining wells exhibited TVOCs ranging from 17 ppb in LW-09 to 776 ppb in LW-15. URS states that analysis of recent groundwater sampling data indicates that moderate VOC concentrations persist in the northeastern part of the site. According to URS, the existing monitoring well network is not sufficient to delineate this plume. Therefore, URS has elected to install four additional monitoring wells in this area to be included in the quarterly monitoring program. URS has scheduled the new well installation for June 2012. The work plan for wells installation was approved by DEC in March 1012. URS also intends to implement additional RegenOx injections once the new wells have been installed and the extent of the VOC impacts has been refined. In an email dated March 14, 2012, the NYSDEC

MAP FINDINGS

**MANHATTAN EAST 10 DOS -DDC (Continued)**

**S104510350**

approved this recommendation. The NYSDEC also suggested that other remedial alternatives be considered for the site if the additional RegenOx application is unsuccessful. URS will continue to monitor groundwater on a quarterly basis, and will implement the delineation and remediation strategies identified above. AD12/05/2012: Received 2nd and 3rd Quarter of 2012 Monitoring Reports. DL pdf copy to eDocs. Will review. AD01/28/2013: Reviewed the report. It states that Associated Environmental Service (Associated) installed monitoring wells MW-02 through MW-05 from June 18 through 22, and October 1 and 2, 2012 under URS supervision. A total of four soil samples were collected during installation of the monitoring wells (MW-02 through MW-05). VOCs were detected above NYSDEC Soil Cleanup criteria in the shallower sample depth at MW-2(9-10'- 37,580ppb) and MW-03(7.5-8.5'-104,100ppb) locations. Recent analytical data indicates that both of these samples were collected close to depth of the groundwater table at the site. Groundwater Sampling data: The wells currently included in the quarterly groundwater monitoring program are: LW-02, LW-03, LW-04, LW-06, LW-07, LW-09, LW-10, LW-12, LW-14, LW-15, LW-19, LW-20, and MW-01 through MW-05. The GW samples are analyzed for petroleum related VOCs using United States Environmental Protection Agency (USEPA) Method SW 8260. The depth to groundwater at the site ranges from approximately 8 to 11 feet bgs. The predominant flow direction is to the east and northeast. The depth to bedrock at this site ranges from 9 feet in the southern part of the site to more than 20 feet in the west-central and northern portions of the site. The groundwater sampling for the second quarter of 2012 was completed on June 4 and 5, 2012 except for newly-installed monitoring well MW-03 which was developed and sampled on July 23, 2012. The third quarter sampling event was conducted on August 28, 2012. During both the second and third quarter sampling events, monitoring well LW-20 was not sampled because it contains a petroleum absorbent sock and typically contains free product. Wells MW-02 and MW-04 also were not sampled during the either quarter because installation of these two wells was completed after the sampling events. Well MW-05 was not sampled in the second quarter event because it was found to be dry; this well was sampled in the third quarter. For the third quarter sampling event on August 28, 2012, the analytical results showed that no VOCs exceeded the NYSDEC Groundwater Quality Standards in 9 monitoring wells: LW-02, LW-04, LW-06, LW-07, LW-09, LW-10, LW-12, MW-01, and MW-05. The five monitoring wells with exceedances of the criteria exhibited total VOCs ranging from 65 ppb in LW-19 to 2,161 ppb in LW-14. Results from this most recent sampling event generally were in the same range as the results from the previous event in June. Based on recent trends in groundwater sampling data and soil sampling completed during removal of five 550-gallon closed in place USTs in August 2011, URS states that it appears that the groundwater impacts historically detected in the western half of the site have been successfully remediated by chemical oxidation. In the western half of the site, only well LW-03 continues to exhibit minor VOC contamination. The last quarterly report of 2009 presented the results of a soil sampling program that showed significant soil contamination in the saturated zone in the northeast corner of the site and recommended additional injection of RegenOx for treatment. In an email dated March 14, 2012, the NYSDEC approved this recommendation. Based on those soil sampling results, as well as data collected during the recent installation of four additional GW monitoring wells in this area, URS prepared a work plan for the

**S104510350**

injections to be implemented in fourth quarter 2012. URS will continue quarterly GW monitoring at the site. AD04/09/2013: Received an e-mail from K. Schanahan of URS with attached GW monitoring Report and a Scope of Work for Additional Round of RegenOx Injection saying the following: "Ainura, During the last project status meeting we discussed the Manhattan East 10 site operated by the New York City Sanitation Department. Based on our discussions it was decided that URS would send you the Work Order for the next Regenox Injection event for your review and approval. Specifically, I believe you wanted to look at the proposed injection locations and quantities. The Work Order is attached. Please let us know if this is acceptable as soon as possible since our contractor is ready to initiate construction. We have also attached the latest monitoring report which was posted to the website today for reference. Please note the favorable groundwater concentrations for the recent sampling event. Kevin J. Shanahan Senior Project Manager URS Corporation" Received a phone call from Kevin Schanahan of URS. He asked to expedite the approval of the work plan. Reviewed the work plan. It states that RegenOx injections were successful in reducing VOCs levels in site monitoring wells, but says that some of the site's monitoring wells still indicated elevated levels of VOCs and that one well (LW-20) exhibited free product sheen during the last monitoring round. Based on the data, URS recommends performing an additional round of RegenOx injections targeting the northeast area of the site, via thirty injection points. Free product will be removed from the affected well before beginning the injections. A summary report with conclusions and recommendations will be provided to DEC. 04/10/2013: Issued and sent an approval letter to A. Samani. DL pdf copy of the letter to eDocs. AD04/12/2013: Received hard copy of the Groundwater Monitoring and Remediation Report for 4th Quarter 2012 and 1st Quarter 2013. DL to eDocs. Will review. AD05/28/2013: Reviewed the report. It states that in September 2012, URS issued a Work Order to conduct RegenOx injections via direct-push injection borings at 14 locations in the northeast corner of the site. Figure 4 shows the actual injected locations both inside the building and in the sidewalk. The injections were conducted from the bottom of the boring progressing upward; the injection interval for each boring extended from bedrock or refusal up to 8 feet below ground surface (bgs) or until the reagents begin to daylight from the boring. The goal was to inject 30 pounds of Part A RegenOx, 30 pounds of Part B RegenOx and 100 gallons of water into each vertical foot of the injected interval. The first three injection borings were conducted on October 22, 2012 as a preliminary event to determine how easily the borings could be installed, how much material was likely to be injected at each location, and how much daylighting or other issues could be expected. The remainder of the injections were completed in the period from January 15 through 21, 2013. The table below summarizes the actual injection intervals and quantities for each of the 13 borings that were completed. Overall, the actual quantity of 1,410 pounds of Part A RegenOx injected during this event was within the target range of 1,260 and 2,100 pounds determined during the design. Based on the apparent improvement in groundwater quality as a result of the recent RegenOx event URS intends to implement additional injection events in the second quarter of 2013. Groundwater sampling: The wells currently included in the quarterly groundwater monitoring program are: LW-02, LW-03, LW-04, LW-06, LW-07, LW-09, LW-10, LW-12, LW-14, LW-15, LW-19, LW-20, and MW-01 through MW-05. The groundwater sampling for the

**MANHATTAN EAST 10 DOS -DDC (Continued)**

**S104510350**

fourth quarter of 2012 was completed on November 26 and 27, 2012; the first quarter 2013 sampling event was completed on February 13 and 14, 2013. Monitoring well LW-20 was not sampled during either event because it contained a heavy sheen of free product. Monitoring well LW-15 was not sampled during the first quarter 2013 because it was blocked by a car. For the most recent sampling event on February 13 and 14, 2013, the analytical results showed that no VOCs exceeded the NYSDEC Groundwater Quality Standards in monitoring wells LW-02, LW-04, LW-06, LW-07, LW-12, LW-14, MW-01, MW-04 and MW-05. In addition, monitoring wells LW-03, LW-09, and LW-19 each only exceeded the criterion for one or two compounds and had low total VOC concentrations of 33 ppb, 8 ppb, and 24 ppb, respectively. The highest total VOC concentration was in well MW-02 with 739 ppb total VOCs. After the RegenOx injections completed in 2008-2009, the groundwater analytical data showed favorable results in the western half of the site and uncertain results in the eastern half of the site which is located further downgradient. wells in the western area of the site such as LW-03 and LW-06 initially showed an increase in concentration following the first RegenOx injections in 2008 and 2009, but are now consistently low. Based on these results, it appears that the contaminant concentrations in this area have been reduced to trace amounts and it is likely that no further remedial actions will be required in this area. Chemical oxidation was particularly successful at monitoring well LW-10 where the total VOC concentrations prior to RegenOx injections ranged between 1,000 ppb and 6,000 ppb and now are consistently below 100 ppb. Conclusions: URS states that based on recent trends in groundwater sampling data, it appears that the groundwater impacts historically detected in the western half of the site have been successfully remediated by chemical oxidation. In the western half of the site, only well LW-03 continues to exhibit minor VOC contamination. The soil sampling completed during removal of five 550-gallon closed in place USTs in August 2011, also indicated that there were no soil impacts in this area. In the eastern half of the site, total VOC concentrations have been relatively consistent for the past several years. However, following a round of chemical oxidation injections completed in October 2012 and January 2013, the most recent monitoring results indicate significant reductions in total VOC concentrations in several of the most contaminated wells. Future monitoring events will indicate whether the reductions observed are sustained and how many additional injection events may be required to achieve remediation goals. Based on the current status of the site, the remedial actions, and the most recent groundwater monitoring data, URS recommends the following: - Continue to conduct additional RegenOx injection events in the northeast area of the site, as warranted. As requested by the NYSDEC at the last quarterly meeting, URS will submit the proposed scope of work for the next RegenOx injection to the NYSDEC for review. - Continue the quarterly groundwater monitoring and sampling. AD11/14/2013: Received hard copy of the Groundwater Monitoring and Remediation Report for 2nd and 3rd Quarters of 2013. DL to eDocs. Will review. AD12/05/2013: Reviewed the report. It states that in April 2013, URS issued Work Order R-84-02 for one round of RegenOx injections to be conducted at the site. The work order proposed injection borings at a total of 30 locations following the same methodology and target injection quantities as the prior scope of work (30 pounds Part A and B RegenOx and 100 pounds of water per foot). The injections were completed between April 30 and June 4,

2013. Injections were successfully completed at 16 of the proposed locations; injection could not be completed at several locations due to overhead obstructions that limited access with the equipment; the remainder of the proposed injections could not be completed due to refusal encountered during installation. The depth to groundwater at the site ranges from approximately 8 to 11 feet bgs. The predominant flow direction is to the east and northeast, although there is considerable variability across the site. The depth to bedrock at this site ranges from 9 feet in the southern part of the site to more than 20 feet in the west-central and northern portions of the site. URS performs quarterly groundwater monitoring to document the progress of the remedial activities at this site. The wells currently included in the quarterly groundwater monitoring program are: LW-02, LW-03, LW-04, LW-06, LW-07, LW-09, LW-10, LW-12, LW-14, LW-15, LW-19, LW-20, and MW-01 through MW-05. The groundwater sampling for the second quarter of 2013 was completed on May 6 and 7, 2013; the third quarter 2013 sampling event was completed on July 29 and 30, 2013. All of the wells currently in the groundwater monitoring program were sampled during both events. For the most recent sampling event on July 29 and 30, 2013, the analytical results showed that no VOCs exceeded the NYSDEC Groundwater Quality Standards in 10 monitoring wells: LW-02, LW-04, LW-06, LW-07, LW-09, LW-12, LW-19, MW-01, MW-04 and MW-05. The highest total VOCs were in wells LW-14 with 8,671 ppb and LW-20 with 3,092 ppb. In the remaining wells, the total VOC concentrations ranged from 33 ppb to 873 ppb. Minor quantities of product have been detected in monitoring well LW-20 over the past year. A petroleum absorbent sock was installed in the well in June 2011 and replaced approximately every six months as it became saturated. In an effort to flush the product from the well, URS redeveloped the well in May 2013 by pumping 100 gallons of water from the well. The sock and development water were disposed of off-site. During the two subsequent sampling events, product has not been detected in this well, or any other monitoring wells. The report states that over 25,000 pounds of RegenOx has been injected into the saturated zone over the past five years to oxidize petroleum-related VOCs in groundwater. Based on recent trends in groundwater sampling data, URS concludes that the groundwater impacts historically detected in the western half of the site have been successfully remediated by chemical oxidation. In the western half of the site, only wells LW-03 and LW-10 continue to exhibit minor VOC contamination. The soil sampling completed during removal of five 550-gallon closed in place USTs in August 2011 also indicated that there were no soil impacts in this area. In the eastern half of the site, total VOC concentrations in many of the wells show significant improvement following the recent implementation of RegenOx injections. There are however, several locations with elevated VOC concentrations that warrant additional remedial actions. Based on the current status of the site, the remedial actions, and the most recent groundwater monitoring data as summarized above, URS recommends the following: No additional investigations at this time. Conduct at least one additional RegenOx injection event in the northeast area of the site. Continue the quarterly groundwater monitoring and sampling. There are no proposals requiring DEC approval at this time.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Investigation Report (SIR). Groundwater depth varying throughout site (10-18fbg). Some wells dry or too little water present to sample. Supplemental Subsurface Investigation Work Plan proposed along with SIR to explain the lack of groundwater at certain locations. Groundwater thought to be in fractured bedrock. 11/20/07 - Haggerty - approved SSIWP continent upon 1 alteration. Bedrock MWs and soil borings around current dispenser islands and tank fields proposed. PM required all borings, MWs must core the first 10ft into bedrock. 12/28/07 - Haggerty - spoke with Shan Zuidema from Kleinfelder, Hydrogeologist for site. Apparently, true bedrock depths deeper than previously believed. During the original Subsurface Investigation, augers met refusal due to a semi-competent layer which wasn't true bedrock. In this supplemental investigation, air rotary was used to pass this layer and they were then able to switch back Hollow-stem auger and collect split spoons discovering deeper contaminated soil. GW was confirmed to be in the fractured bedrock. Field activities to continue to 1/9/07. 04/17/08 - Haggerty - reviewed SSIR dated 4/8/08. SSI consisted of 15 borings and the removal of 3 wells to advance further into the subsurface in those locations (MW-5, MW-6, MW-7). MW-5 and MW-6 were converted to monitoring well clusters (shallow and deep). Soil screening was performed at all boring locations. SB-13 revealed high level of BTEX contamination from ~5fbg to the terminal depth of the boring (11.5ft). A Proposed Investigation Activities section was included in the SSIR to further investigate soil contamination near SB-13 as well as to install 2 Injection Points for an upcoming pilot test. Injection of Certified potable water into Injection Points will be monitored via the surrounding MW network to ensure hydraulic inter-connectivity. I approved this additional work. Based on the result, a Pilot Test Work Plan will be composed. 6/16/08 - Haggerty: approved Preliminary Feasibility Investigation Report/Site Statue Update Report dated 6/12/08. Proposed installation of 8 additional injection points as well as a proposed Chemical Oxidation Pilot test. Reviewed expanded groundwater parameters to determine whether this site is suitable for this technology. Certain parameters indicate this technology will work. 3/30/09 - Haggerty: review Feasibility Investigation Report for the RegenOx injection Pilot test. Pilot test shows favorable results. ExxonMobil proposed an Exposure Assessment in an attempt to close out the spill. 4/17/09 - Haggerty: sent comment email to Scott Bushroe from ExxonMobil. Figure 8 (Groundwater Hydrocarbon Distribution Map for 7/25/08 and 8/21/08) must be revised and resubmitted. The BTEX and MTBE concentrations are transposed. 2. The results from the soil investigation surrounding SB-13 demonstrate the contamination is localized. Also, the contamination does not appear to be impacting downgradient groundwater. At this time, no further action is required concerning the soil contamination encountered in SB-13. 3. Results from the Feasibility Investigation are encouraging although at this time BTEX concentrations remain elevated. I propose waiting for the next round quarterly groundwater data to confirm the decrease in concentrations and at that time scheduling another round of RegenOx injection as your remedy. 4. An Exposure Assessment is not warranted at this time. Based on the groundwater data, additional injections are required. ExxonMobil opted not to remove the tanks, lines, dispensers, and over-excavate and therefore, the remaining contamination is ExxonMobil's responsibility and not that of the new operator. 5/20/09 - Haggerty: spoke with ExxonMobil at our bi-annual program meeting. ExxonMobil will prepare RAP for further

injections.11/4/09 - Haggerty: met with Exxon at our bi-annual program meeting. At our last program meeting, the Dept. required them to perform full-scale injection under a RAP/ Consent Order. Exxon had previously proposed submitting the RAP by 12/31/09 (which would be 7 months after the Dept. required the RAP) which Dept. had previously informed Exxon that was unacceptable. In addition, ExxonMobil legal states that they will not sign a Consent Order without an approved RAP and CAP. This is also unacceptable to the Dept. Therefore, the Dept. will issue a PIN to complete the remediation.11/6/09 - Haggerty: PIN 05118 issued. Envirotrac will be our consultant. The Scope of Work was attached to the signed call out.April '1010 injection points installed by ExxonMobil to deliver RegenOx and Activator. RegenOx injection pilot test demonstrated good results. ExxonMobil proposed doing an Exposure Assessment instead of proceeding with additional injections. PM replied stating an Exposure Assessment is not warranted at this time and additional injections are required as they remedy. ExxonMobil requested a meeting to discuss the matter further. Met with Exxon/ Kleinfelder at on May 20, 2009 at our program meeting. PM explained that an Exposure Assessment can only be submitted when remediation is complete and residual contamination exists, not in place of remediation. Full Scale injection will be implemented. Referred site to Scott Owens for Consent Order. Mobil proposed submitting the RAP by 12/31/09 which would give Mobil over 7 months since the Dept required them to perform full-scale injection as their remedy. The Dept. issued a PIN. Dept. executed access agreement with the NYC Dept. of Parks which owns the land (Major Deegan Expressway runs through Van Cortlandt Park). The gas stations are leased from the NYCDOP. Envirotrac is the Dept. contractor for the full-scale injection. PM sent Underground Injection Control (UIC) EPA 30 day notification on12/28/09 and received EPA response on 1/19/10. Injection took place on 2/17/10 after finally received access from Parks Dept. First post-injection sampling took place on 3/17/10. All wells below 1,000ppb of BTEX-----

-----May '10BTEX concentrations rebounded back to pre-(2nd)injection concentrations which was expected. Unfortunately, due to the lack of funds in the Spill Fund, all future work has been postponed until further notice.July 2010 - no changeAugust 2012 - received permission to conduct one round of GW samplingDecember 2012 - reviewed groundwater sampling report and VOC concentrations have decreased. A discussion with my Section Chief is needed to determine the next stepMay 2013 - PM will schedule time to discuss with Section Chief

Site Description: Location: The site is approximate 1.8 acres, located at 285 East 138th Street in the Bronx. The Site is bordered on the west by the 3rd Avenues, to the north by East 139th St., to the east by residential buildings and the NYC Police Department 40th Precinct, and to the south by East 138th St. Properties surrounding the site are primarily residential, with some commercial and industrial uses. Site Features: The Site is currently occupied by a 7-story residential building, home for low-income senior citizens. Historical Uses: Former uses on the Site include a gasoline filling station with five 550-gallon underground storage tanks (USTs), which has operated on the southwest corner of the property for at least 40 years prior to 1968. A parking garage and auto repair facility with 2 USTs occupied the north-central part of the site from at least 1935 through 1978. A metal work shop was located on the southeast portion of the site from 1951 through 1978, and a mattress manufacturing factory was located on the northwest part of the site from 1944 through 1978. Geology and Hydrogeology: The 2011 remedial investigation (RI), revealed soils consisting mainly of clayey sands to silt mixtures in the 20-25 feet bg drilled borings. Refusal was encountered in one of the soil borings (SB-01) at 20 feet below ground surface (bgs). All other borings were completed to 25 feet bgs without encountering bedrock. On-Site groundwater levels measured over the course of the RI project

confirm the depth to groundwater to be in the range of approximately 13 to 17 feet bgs with flow toward the southwest. Certificate of Completion issued on 12/19/2013.

Env Problem: Nature and Extent of Contamination: Prior to Remediation Based on the investigations conducted to date, known contaminants including chlorinated solvents, semi-volatile organic compounds (SVOCs), metals, pesticides and other volatile organic compounds (VOCs) were present in the subsurface. These contaminants are impacting soil, groundwater, and soil vapor. Previous investigations included a Phase I Environmental Site Assessment and a Remedial Investigation. Soil - The concentrations of metals (barium, copper, mercury, lead and zinc), 4,4-DDT, toluene, ethylbenzene and PAHs exceeded the UUSCOs in the samples collected from 0 to 10 feet in four borings installed across the Site (SB-04, SB-08 and SB-09). The concentrations of 4,4-DDE, 4,4-DDT, lead and PAHs exceeded UUSCOs in the 10-20 foot interval in only three borings (SB-04, SB-06 and SB-10). Ethylbenzene ranged from 0 to 1.4 ppm (restricted residential SCO of 41 ppm, Groundwater Protection SCO of 1 ppm) and toluene ranged from 0 to 1.1 ppm (restricted residential SCO of 100 ppm). Groundwater - VOCs detected in groundwater samples collected were tetrachloroethene (PCE), trichloroethene (TCE), cis-1,2-dichloroethene (cis-DCE), ethylbenzene, meta- (m)/para- (p) xylene and isopropylbenzene. PCE ranged from 0 to 19 ppb, TCE ranged from 0 to 25 ppb, cis-1,2-DCE ranged from 22 to 43 ppb, m/p-xylenes ranged from 0 to 19 ppb, and propylbenzene ranged from 0 to 11 ppb. Soil Vapor - PCE was detected in three out of the four soil vapor samples and TCE was detected in only one sample at 2 ug/ m3. PCE ranged from 0 to 75 ug/ m3. Based on this data, soil vapor intrusion into on-site buildings is not occurring and no mitigation was necessary. Significant Threat: NYSDEC and NYSDOH have determined that this site does not pose a significant threat to the public health or environment. Post-Remediation Remediation at the site is complete. Residual contamination in soil and groundwater is being managed under a Site Management Plan. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan. The Certificate of Completion was issued on December 19, 2013.

Health Problem: Measures are in place to control the potential for coming in contact with subsurface soil and groundwater remaining on the site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination.

Groundwater - VOCs detected in groundwater samples collected were tetrachloroethene (PCE), trichloroethene (TCE), cis-1,2-dichloroethene (cis-DCE), ethylbenzene, meta- (m)/para- (p) xylene and isopropylbenzene. PCE ranged from 0 to 19 ppb, TCE ranged from 0 to 25 ppb, cis-1,2-DCE ranged from 22 to 43 ppb, m/p-xylenes ranged from 0 to 19 ppb, and propylbenzene ranged from 0 to 11 ppb. Soil Vapor - PCE was detected in three out of the four soil vapor samples and TCE was detected in only one sample at 2 ug/ m3. PCE ranged from 0 to 75 ug/ m3. Based on this data, soil vapor intrusion into on-site buildings is not occurring and no mitigation was necessary. Significant Threat: NYSDEC and NYSDOH have determined that this site does not pose a significant threat to the public health or environment. Post-Remediation Remediation at the site is complete. Residual contamination in soil and groundwater is being managed under a Site Management Plan. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan. The Certificate of Completion was issued on December 19, 2013.

Health Problem: Measures are in place to control the potential for coming in contact with subsurface soil and groundwater remaining on the site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination.

MAP FINDINGS

**BORINQUEN COURT (Continued)**

**S116041516**

**Site Description:** Location: The site is approximate 1.8 acres, located at 285 East 138th Street in the Bronx. The Site is bordered on the west by the 3rd Avenues, to the north by East 139th St., to the east by residential buildings and the NYC Police Department 40th Precinct, and to the south by East 138th St. Properties surrounding the site are primarily residential, with some commercial and industrial uses. **Site Features:** The Site is currently occupied by a 7-story residential building, home for low-income senior citizens. **Historical Uses:** Former uses on the Site include a gasoline filling station with five 550-gallon underground storage tanks (USTs), which has operated on the southwest corner of the property for at least 40 years prior to 1968. A parking garage and auto repair facility with 2 USTs occupied the north-central part of the site from at least 1935 through 1978. A metal work shop was located on the southeast portion of the site from 1951 through 1978, and a mattress manufacturing factory was located on the northwest part of the site from 1944 through 1978. **Geology and Hydrogeology:** The 2011 remedial investigation (RI), revealed soils consisting mainly of clayey sands to silt mixtures in the 20-25 feet bg drilled borings. Refusal was encountered in one of the soil borings (SB-01) at 20 feet below ground surface (bgs). All other borings were completed to 25 feet bgs without encountering bedrock. On-Site groundwater levels measured over the course of the RI project confirm the depth to groundwater to be in the range of approximately 13 to 17 feet bgs with flow toward the southwest. Certificate of Completion issued on 12/19/2013.

**Env Problem:** **Nature and Extent of Contamination:** Prior to Remediation Based on the investigations conducted to date, known contaminants including chlorinated solvents, semi-volatile organic compounds (SVOCs), metals, pesticides and other volatile organic compounds (VOCs) were present in the subsurface. These contaminants are impacting soil, groundwater, and soil vapor. Previous investigations included a Phase I Environmental Site Assessment and a Remedial Investigation. **Soil -** The concentrations of metals (barium, copper, mercury, lead and zinc), 4,4-DDT, toluene, ethylbenzene and PAHs exceeded the UUSCOs in the samples collected from 0 to 10 feet in four borings installed across the Site (SB-04, SB-08 and SB-09). The concentrations of 4,4-DDE, 4,4-DDT, lead and PAHs exceeded UUSCOs in the 10-20 foot interval in only three borings (SB-04, SB-06 and SB-10). Ethylbenzene ranged from 0 to 1.4 ppm (restricted residential SCO of 41 ppm, Groundwater Protection SCO of 1 ppm) and toluene ranged from 0 to 1.1 ppm (restricted residential SCO of 100 ppm). **Groundwater - VOCs** detected in groundwater samples collected were tetrachloroethene (PCE), trichloroethene (TCE), cis-1,2-dichloroethene (cis-DCE), ethylbenzene, meta- (m)/para- (p) xylene and isopropylbenzene. PCE ranged from 0 to 19 ppb, TCE ranged from 0 to 25 ppb, cis-1,2-DCE ranged from 22 to 43 ppb, m/p-xylenes ranged from 0 to 19 ppb, and propylbenzene ranged from 0 to 11 ppb. **Soil Vapor -** PCE was detected in three out of the four soil vapor samples and TCE was detected in only one sample at 2 ug/ m3. PCE ranged from 0 to 75 ug/ m3. Based on this data, soil vapor intrusion into on-site buildings is not occurring and no mitigation was necessary. **Significant Threat:** NYSDEC and NYSDOH have determined that this site does not pose a significant threat to the public health or environment. **Post-Remediation** Remediation at the site is complete. Residual contamination in soil and groundwater is being managed under a Site Management Plan. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan. The Certificate of Completion was issued on December

DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "TIBBE" After upgrade of tank, a test was performed before it was returned to service. The tank failed. It was determined that the failure was in the neck of the tank manway within the sump. The leak was repaired and the tank was retested and passed. Sump has subsequently been tested and passed so there was no release to the environment.  
Remarks: gross fail - tank contained diesel

DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "TIBBE"11/14/94: REASSIGNED FROM SIGONA TO ZHITOMIRSKY ON 11/14/94. TRANSFERED FROM HLAE TO TIBBE ON 12/27/00. SEE ALSO 88-08930, 88-09111 & 90-07322. TANKS REPLACED/REPAIRED/UPGRADED. REMEDIATION ONGOING. 06-17-08: Spill # 0502231 has been closed and consolidated under this number. 0502231 was a release of #4 heating during a delievery from a disconnected fill line. 801 gallons were delievered before the problem was discovered. NYCT DOB determined that 439 gallons of fuel oil were recovered during immediate cleanup, 68 gallons were recovered from the facility's oil/water separator system, and at least 109 gallons and as much as 275 gallons of the remaining fuel oil spilled into the UST via the open fill pipe. Based on these volumes, between 19 and 185 gallons of fuel oil could have spilled into the pea gravel surrounding the USTs. The residual contamination will be addressed during the full site remediation.11/12/10 - spill re-assigned from Tibbe to Joe O'Connell5/19/2011 The spill was reassigned from Joe O'Connell to Linda Ross2/27/12 - Raphael Ketani. Spill reassigned to me during February 2012. Monthly progress update meetings are taking place.4/26/12 - Raphael Ketani. Monthly groundwater monitoring is being performed by URS.12/18/12 - Raphael Ketani. There have been monthly to bimonthly (once every two months) update meetings with the NYCT regarding this and 17 other sites. The information for the sites is in the UIS under e-docs, multiple sites, DER, Region 2, Petroleum Spills, NYCT.

Remarks: DISCONNECTED & EXCAVATED TANK.

Site Description: Location: The site is located at 255 East 138th Street, between Rider Avenue and Third Avenue, in the Bronx. The site is identified as Block 2333, Lot 1. Site Features: The site is approximately 20,000 square feet and is currently vacant with no on-site structures. Current Zoning/Uses: The property is in a special mixed-use district, zoned M1-4/R7X (manufacturing/ residential). The site is currently vacant and has not been used since 2006. To the north are large, multi-story former industrial buildings, to the west is a one-story garage building currently used for parking and storage, to the east (across Third Avenue and Morris Avenue) is a senior citizen residential building and to the south (across East 138th Street) is an abandoned gas station and commercial storefronts with residential apartments above. Past Use of the Site: Most recently, the eastern portion of the site (formerly known as 2551 3rd Avenue) was occupied by a KFC restaurant (approximately 1969 to 2006, demolished in 2012). Prior to that, the site was used as a gas station and machine shop from approximately 1935 to 1969 (originally identified as City Gas and later Cities Service Oil Company). The western portion of the site (formerly known as 245 East 138th Street) has been operated as a machine shop, gasoline station, and auto repair facility by various operators for 80 years, most recently as a Getty gas station and auto repair shop. Site Geology and Hydrogeology: Depth to groundwater has been measured at 4.75 to 6.32 feet below ground surface and flows to the southwest. The geology generally consists of dark brown sand from 0 to 4 feet below grade, with evidence of urban fill material such as
